This is the first attempt to synthesize current understanding of biodiversity in the great European hot spot. A diverse group of international researchers offers perspective on biodiversity at the level of the gene, species and ecosystem, including contributions on temporal change. Biological groups include plants, mammals, spiders and humans, cave-dwelling organisms, fish, aquatic invertebrates and algae.

Zoonoses are currently considered as one of the most

important threats for public health worldwide. Zoonoses can be defined as any disease or infection that is naturally transmissible from vertebrate or invertebrate animals to humans and vice-versa. Approximately 75% of recently emerging infectious diseases affecting humans are diseases of animal origin; approximately 60% of all human pathogens are zoonotic. All types of potential pathogenic agents, including viruses, parasites, bacteria and fungi, can cause these zoonotic infections. From the wide range of potential vectors of zoonoses, insects are probably those of major significance due to their abundance, high plasticity and adaptability to different

kinds of pathogens, high degrees of synanthropism in several groups and difficulties to apply effective programs of population control. Although ticks, flies, cockroaches, bugs and fleas are excellent insects capable to transmit viruses, parasites and bacteria, undoubtedly mosquitoes are the most important disease vectors. Mosquito borne diseases like malaria, dengue, equine encephalitis, West Nile, Mayaro or Chikungunya are zoonoses with increasing incidence in last years in tropical and temperate countries. Vertebrates can also transmit serious zoonoses, highlighting the role of some carnivorous animals in rabies dissemination or the spread of rodent borne

diseases in several rural and urban areas. Moreover, the significance of other food borne zoonoses such as taeniasis, trichinellosis or toxoplasmosis may not be underestimated. According to WHO, FAO and OIE guidelines an emerging zoonotic disease can be defined as a zoonosis that is newly recognized or newly evolved, or that has occurred previously but shows an increase of incidence or expansion in geographical, host or vector range. There are many factors that can provoke or accelerate the emergence of zoonoses, such as environmental changes, habitat modifications, variations of human and animal demography, pathogens and vectors

anomalous mobilization related with human practices and globalization, deterioration of the strategies of vector control or changes in pathogen genetics. To reduce public health risks from zoonoses is absolutely necessary to acquire an integrative perspective that includes the study of the complexity of interactions among humans, animals and environment in order to be able to fight against these issues of primary interest for human health. In any case, although zoonoses represent significant public health threats, many of them still remain as neglected diseases and consequently are not prioritized by some health international organisms.

The central document of the Second Vatican Council, *Lumen Gentium* was promulgated by Pope Paul VI on November 21, 1964. This document is "the keystone" of the Councils whole Magisterium. It focuses on the whole Church as a communion of charity. With it, according to John Paul II, the Second Vatican Council wished to shed light on the Churchs reality: a wonderful but complex reality consisting of human and divine elements, visible and invisible.

Starting in Roman Britain and moving on to imperial Rome itself, Unit 3 focuses on the murderous schemes and machinations of Gaius Salvius Liberalis, as he plots his ruthless and apparently unstoppable rise to power. was no exception, as readers of Petronius are aware. The Romance languages have traditionally been regarded as developing out of a 'language of the common people' (Vulgar Latin), but studies of modern languages demonstrate that linguistic change does not merely come, in the social sense, 'from below'. There is change from above, as prestige usages work their way down the social scale, and change may also occur across the social

classes. This book is a history of many of the developments undergone by the Latin language as it changed into Romance, demonstrating the varying social levels at which change was initiated. About thirty topics are dealt with, many of them more systematically than ever before. Discussions often start in the early Republic with Plautus, and the book is as much about the literary language as about informal varieties.

The conservation, sustainable use and development of aquatic genetic resources (AqGR) is critical to the future supply of fish. The State of the World's Aquatic Genetic Resources for Food and Agriculture is the first ever global assessment of these resources, with the scope of this first Report being limited to cultured AqGR and their wild relatives, within national jurisdiction. The Report draws on 92 reports from FAO member countries and five specially commissioned thematic

background studies. The reporting countries are responsible for 96 percent of global aquaculture production. The Report sets the context with a review of the state of world's aquaculture and fisheries and includes overviews of the uses and exchanges of AqGR, the drivers and trends impacting AqGR and the extent of ex situ and in situ conservation efforts. The Report also investigates the roles of stakeholders in AqGR and the levels of activity in research, education, training and extension, and reviews

national policies and the levels of regional and international cooperation on AqGR. Finally, needs and challenges are assessed in the context of the findings from the data collected from the countries. The Report represents a snapshot of the present status of AqGR and forms a valuable technical reference document, particularly where it presents standardized key terminology and concepts. Empire, from their origins to the collapse of the Empire. The architecture of villas could be humble or grand, and sometimes luxurious. Villas were most often farms where wine, olive oil, cereals, and manufactured goods, among other products, were produced. They were also venues for hospitality, conversation, and thinking on pagan, and ultimately Christian, themes. Villas spread as the Empire grew. Like towns and cities, they became the means of power and assimilation, just as infrastructure, such as aqueducts and

other women clergy serving as deacon, presbyter/priest, and bishop. In addition, the two oldest surviving artifacts to depict people at an altar table inside a real church depict women and men in a gender-parallel liturgy inside two of the most important churches in Christendom—Old Saint Peter's Basilica in Rome and the second Hagia Sophia in Constantinople. Dr. Kateusz's research brings to light centuries of censorship, both ancient and modern, and debunks the modern imagination that from the beginning only men were apostles and clergy.

and varied history of Frankish identity in Merovingian and Carolingian historiography, it offers a new basis for comparing the history of collective and ethnic identity in the Christian West with other contexts, especially the Islamic and Byzantine worlds. The tremendous political success of the Frankish kingdoms provided the medieval West with fundamental political, religious and social structures, including a change from the Roman perspective on ethnicity as the quality of the 'Other' to the Carolingian perception that a variety of Christian peoples were chosen by God to reign over the former Roman provinces. Interpreting identity as an open-ended process, Helmut Reimitz explores the role of Frankish identity in the

Monasticism was the dominant form of religious life both in the medieval West and in the Byzantine world. Latin and Greek Monasticism in the Crusader States explores the parallel histories of monasticism in western and Byzantine traditions in the Near East in the period c.1050-1300. Bernard Hamilton and Andrew Jotischky follow the parallel histories of new Latin foundations alongside the survival and revival of Greek Orthodox monastic life under Crusader rule. Examining the involvement of monasteries in the newly founded Crusader States, the institutional organization of monasteries, the

Ostia in Late Antiquity is the first book to narrate the life of Ostia Antica, Rome's ancient harbor, during the later empire.

A prominent lawyer and administrator, Pliny (c. AD 61-113) was also a prolific letter-writer, who numbered among his correspondents such eminent figures as Tacitus, Suetonius and the Emperor Trajan, as well as a wide circle of friends and family. His lively and very personal letters address an astonishing range of topics, from a deeply moving account of his uncle's death in the eruption that engulfed Pompeii, to observations on the early Christians - 'a desperate sort of cult carried to
