This is a concise, easy to use, step-by-step guide for applied researchers conducting exploratory factor analysis (EFA) using SPSS. In this book, Dr. Watkins systematically reviews each decision step in EFA with screen shots and code from SPSS and recommends evidence-based best-practice procedures. This is an eminently applied, practical approach with few or no formulas and is aimed at readers with little to no mathematical background. Dr. Watkins maintains an accessible tone throughout and uses minimal jargon to help facilitate grasp of the key issues users will face while applying EFA, along with how to implement, interpret, and report results. Copious scholarly references and quotations are included to support the reader in responding to editorial reviews. This is a valuable resource for upper-level undergraduate and postgraduate students, as well as for more experienced researchers undertaking multivariate or structure equation modeling courses across the behavioral, medical, and social sciences.

Designed for busy teachers and other school-based professionals, this book presents step-by-step guidelines for implementing seven highly effective strategies to improve classroom management and instructional delivery. These key low-intensity strategies are grounded in the principles of positive behavior intervention and support (PBIS), and are easy to integrate into routine teaching practice. Chapters discuss exactly how to use each strategy to decrease disruptive behavior and enhance student engagement and achievement. Checklists for success are provided, together with concise reviews of the evidence base and ways to measure outcomes. Illustrative case examples span the full K-12 grade range. Reproducible intervention tools can be downloaded and printed in a convenient 8 1/2" x 11" size. See also Managing Challenging Behaviors in Schools, by Kathleen Lynn Lane et al., which shows how these key strategies fit into a broader framework of prevention and intervention.
