Increasingly graduates, and anyone who is entering employment, need an individual digital presence to stand out and showcase themselves to secure their first professional role. This book takes an employability approach to encourage those currently studying, or about to enter the world of work, to develop a set of skills that enables them to recognise and deliver an effective digital presence, firstly for themselves and then for the organisations who would employ them. It does not assume any prior technical knowledge and emphasises the value and benefits of creating a presence to actively participate in the digital economy. By structuring the chapters incrementally, the reader is guided through the development of their own presence while also being given the concepts and tools that will enable them in the future to scale this activity to suit the needs of a startup, an SME or a social business. By using well-established business principles to design a strategy, the reader is guided through the creation of a personal Theory of Change that will enable them to turn an abstract goal into an individual digital presence through a defined series of stages and intermediate change objectives. The book then proposes a series of tactics to draw out concrete actions. A range of examples and case studies from around the world feature in each chapter to showcase the range of different types of digital presence that can be created. By using a strategic and systematic process, this book draws together academic thinking with tangible and highly practical outcomes. It is essential reading for advanced undergraduate and postgraduate students studying any discipline related to the digital world, particularly digital marketing and digital business, entrepreneurship and strategy, as well as those taking employability and personal professional development programmes.

Strategic and Tactical Learning in the Terrorist World

A History

The Art of War is an enduring classic that holds a special place in the culture and history of East Asia. An ancient Chinese text on the philosophy and politics of warfare and military strategy, the treatise was written in 6th century B.C. by a warrior-philosopher now famous all over the world as Sun Tzu. Sun Tzu's teachings remain as relevant to leaders and strategists today as they were to rulers and military generals in ancient times. Divided into thirteen chapters and written succinctly, The Art of War is a must-read for anybody who works in a competitive environment.

A stimulating new inquiry into the fundamental truth of strategy - its purpose, place, utility, and value. This new study is animated by a startling realization: the concept of strategic victory must be summarily discarded. This is not to say that victory has no place in strategy or strategic planning. The outcome of battles and campaigns are variables within the strategist's plan, but victory is a concept that has no meaning there. To the tactical and operational planner, wars are indeed won and lost, and the difference is plain. Success is measurable; failure is obvious. In contrast, the pure strategist understands that war is but one aspect of social and political competition, an ongoing interaction that has no finality. Strategy therefore connects the conduct of war with the intent of politics. It shapes and guides military means in anticipation of a panoply of possible coming events. In the process, strategy changes the context within which events will happen. In this new book we see clearly that the goal of strategy is not to culminate events, to establish finality in the discourse between states, but to continue them; to influence state discourse in such a way that it will go forward on favorable terms. For continue it will. This book will provoke debate and stimulate new thinking across the field and strategic studies.

This study guide is an excellent tool to assist firefighters, fire officers, and chief officers in learning and absorbing the textbook Strategic and Tactical Considerations on the Fireground. It is

designed in a question and answer format to reinforce the text in an easy to read and remember style.

In the post-Cold War world, U.S. Armed Forces will conduct force projection operations more frequently to respond to crises. The military will place demanding requirements on the National Intelligence Community to provide intelligence to support contingency operations. Where do we need to focus for threats in the future? What are the Armed Forces' intelligence requirements to support force projection operations? This study argues that the National Intelligence Community must understand the information requirements of the Armed Forces and narrow their products to meet tactical commanders' needs when supporting crisis operations. It briefly discusses areas for future conflicts, highlights crisis and deployment operations, and provides a general statement of information requirements for these operations. It uses recent historical examples (such as Operation JUST CAUSE in Panama and Operation DESERT SHIELD in Saudi Arabia) to support its conclusions.

Managerial Economics: Applications, Strategies and Tactics

Over the past ten years, there has been growing interest in the process of strategic decision-making among both managers and researchers. Strategic decisions are important for five main reasons: They are large-scale, risky and hard to reverse; they are a bridge between deliberate and emerging strategies; they can be a major source of organizational learning; they play an important part in the development of individual managers and they cut across functions and academic disciplines. Strategic Decisions summarizes the current state of the art in research on strategic decision-making, with chapters prepared by leading strategy researchers. The editors also present implications for current application and proposed directions for future research.

On Tactics is intended to be the remedy to the chaotic and thus far unformed realm of tactical theory and to answer questions like the one above. Part One of the book will establish a tactical system meant to replace the Principles of War checklist. First, the contextual role of tactics with regards to strategy and war will be established. This will necessarily lean on major strategic theories in order to illuminate the role of tactics. This section will be formed around the Physical, Mental, and Moral planes of battlefield interaction used by theorists such as J.F.C Fuller and John Boyd. Each plane will then be examined in turn, and many of the classic Principles of War will be discussed along with some new ones. It will present some standard methods that tacticians can use to gain an advantage on the battlefield using historical examples that illustrate each concept. These "tactical tenants" include maneuver, mass, firepower, tempo, surprise, deception, confusion, shock, and the role of the moral aspects of combat. Finally, Part One will circle back around by discussing the role of tactical victory- once achieved- in contributed to a strategy. Part One is short by design. It is intended to be both compelling and easily mastered for junior non-commissioned officers and company grade officers, while still rich enough to be interesting to both specialist and non-specialist academics. It is a book meant not just for bookshelves but also for ruck sacks and cargo pockets. Part Two will build on Part One by exploring concepts with which the tactician must be familiar with such as the culminating point of victory, mission tactics and decentralized command and control, offensive and defensive operations, and the initiative. Part Three will conclude the book examining implications of the presented tactical systems to a variety of other issues in strategic studies.

In the world of terrorism, knowledge is a critical asset. Recent studies have revealed that, among international terrorists, there is a global sharing of ideas, tactics, strategies, and lessons learned. Teaching Terror examines this sharing of information in the terrorist world, shaping our understanding of, and response to, the global threat of terrorism. Chapters cover various aspects of individual and organizational learning, some using a general level of analysis and others presenting case studies of individual terrorist groups. These groups teach each other through a variety of means, including training camps and the Internet. Terrorist networks are also learning organizations, drawing on situational awareness, adapting their behavior, and, to give one example, improving not just their use of improvised explosive devices, but also rendering technology such as unmanned aerial vehicles and satellite phones ineffective. This book provides a wealth of insights on the transfer of knowledge in the world of terrorism, and offers policy implications for counterterrorism professionals, scholars, and policymakers.

This book investigates the drivers, tactics, and strategy that propel the Trump administration's foreign policy. The key objective of this book is to look beyond the 'noise' of the Trump presidency in order to elucidate and make sense of contemporary US foreign policy. It examines the long-standing convictions of the president and the brutal worldview that he applies to US foreign policy; and his hard-line negotiation tactics and employment of unpredictability to keep America's major foreign interlocutors off-guard, such as NATO members, China, Mexico, Canada, North Korea, and Iran - each of which are considered here. In strategy terms, the book explains that the president is responding to a new multipolar structure of power by engaging a Kissingerian strategy that eschews liberal values and seeks to adjust great power relations in Washington's favor. By drawing upon a range of evidence and case studies, this book makes a number of compelling and provocative points to offer a new vector for debate about the workings, successes and failures, and ultimately the long-term implications for the world, of the Trump presidency. This book will be of much interest to students of US foreign policy, security studies, and IR in general.

***Strategic Thinking in Tactical Times* Springer**

Distilling the ideas of the greatest military theoreticians of history, including Sun Tzu, Niccolò Machiavelli, and Carl von Clausewitz, Antulio J. Echevarria II presents a fascinating account of the "art of the general." Drawing on historical examples, from Hannibal's war against Rome to Napoleon's victory at Austerlitz, from the Allies' campaign to overwhelm Hitler's fortress to the terror attacks of September 11, Echevarria vividly describes the major types of military strategy and their advantages and disadvantages. Clear and engaging, this book shows that military strategy is essential for understanding major events of the past and becomes even more critical today, in a world increasingly threatened by weapons of mass destruction, terrorist attacks, and new dimensions of conflict such as cyberwar and space.

This study serves two purposes. First it examines strategic and tactical intelligence as a profession, the effects of technology on intelligence tasks, and the requirements of the Airland Battle Doctrine on the Army intelligence officer. Secondly, the study provides some thoughts on the preparedness of the Army intelligence officer to perform the essential mission tasks vital to the 1980's and 1990's. Foreign policy decisionmaking and tactical decisionmaking processes of the 1980's and 1990's will require intelligence that is based on advanced collection systems and high quality analysis. Collection systems will be highly sophisticated and technical in order to support the advanced weaponry the Airland Battle Doctrine requires. The need to reduce uncertainty in decisionmaking and the availability of vast quantities of information will make analysis more important. Also the volume of information exchanged in strategic and tactical activities and vice versa will drastically increase. This thesis reveals that the effects of profession, technology and the Airland Battle Doctrine require the intelligence officer to gain a broad background in order to perform his decisionmaking task in the future. The relationship between the decisionmaker and the Army intelligence officer remains a critical one. The study recommends that procedures be established and implemented by a central office to develop the Army intelligence officer into a broad military intelligence officer.

Strategic Intelligence for Tactical Operations

Selected as a Financial Times Best Book of 2013 In Strategy: A History, Sir Lawrence Freedman, one of the world's leading authorities on war and international politics, captures the vast history of strategic thinking, in a consistently engaging and insightful account of how strategy came to pervade every aspect of our lives. The range of Freedman's narrative is extraordinary, moving from the surprisingly advanced strategy practiced in primate groups, to the opposing strategies of Achilles and Odysseus in The Iliad, the strategic advice of Sun Tzu and Machiavelli, the great military innovations of Baron Henri de Jomini and Carl von Clausewitz, the grounding of revolutionary strategy in class struggles by Marx, the insights into corporate strategy found in Peter Drucker and Alfred Sloan, and the contributions of the leading social scientists working on strategy today. The core issue at the heart of strategy, the author notes, is whether it is possible to manipulate and shape our environment rather than simply become the victim of forces beyond one's control. Time and again, Freedman demonstrates that the inherent unpredictability of this environment-subject to chance events, the efforts of opponents, the missteps of friends-provides strategy with its challenge and its drama. Armies or corporations or nations rarely move from one predictable state of affairs to another, but instead feel their way through a series of states, each one not quite what was anticipated, requiring a reappraisal of the original strategy, including its ultimate objective. Thus the picture of strategy that emerges in this book is one that is fluid and flexible, governed by the starting point, not the end point. A brilliant overview of the most prominent strategic theories in history, from David's use of deception against Goliath, to the modern use of game theory in economics, this masterful volume sums up a lifetime of reflection on strategy.

This book is about the process of using analytics and the capabilities of analytics in today's organizations. Cutting through the buzz surrounding the term analytics and the overloaded expectations about using analytics, the book demystifies analytics with an in-depth examination of concepts grounded in operations research and management science. Analytics as a set of tools and processes is only as effective as: The data with which it is working The human judgment

applying the processes and understanding the output of these processes. For this reason, the book focuses on the analytics process. What is intrinsic to analytics' real organizational impact are the careful application of tools and the thoughtful application of their outcomes. This work emphasizes analytics as part of a process that supports decision-making within organizations. It wants to debunk overblown expectations that somehow analytics outputs or analytics as applied to other concepts, such as Big Data, are the be-all and end-all of the analytics process. They are, instead, only a step within a holistic and critical approach to management thinking that can create real value for an organization. To develop this holistic approach, the book is divided into two sections that examine concepts and applications. The first section makes the case for executive management taking a holistic approach to analytics. It draws on rich research in operations and management science that form the context in which analytics tools are to be applied. There is a strong emphasis on knowledge management concepts and techniques, as well as risk management concepts and techniques. The second section focuses on both the use of the analytics process and organizational issues that are required to make the analytics process relevant and impactful.
