When the enemy adopts a policy to attack convoys, truck drivers become front line troops. Convoy commanders must then become tacticians. How to study war? The student of tactics studies previous fights and mentally places himself in the position of the participants. Knowing what they knew, how would he have reacted? In hind sight, what was the best course of action, remembering that there is no one perfect solution? Any number of actions would have succeeded. The tactician must learn what would have worked best for him. For this reason, I have pulled together all the examples of convoy ambushes. The 20th century, Vietnam War, and current war in Iraq provide a wealth of examples of convoy ambushes from which to study. Unfortunately, the US Army did not record many good accounts of ambushes during the Vietnam War. Much of what is presented in this text is based upon oral interviews of the participants, sometimes backed by official record, citations or reports. For this reason, some of the ambush case studies present only the perspective of a crew member of a gun truck or the convoy commander. Since this academic study works best when one mentally takes the place of one of the participants, this view of the ambush serves a useful purpose. After my own review of the ambushes, I have drawn my own conclusion as to what principles apply to convoy ambushes.

How do you test a defibrillator in Rawanda? How can you use a piece of chicken to test an electrosurgery unit? How can you test the billi-lights before releasing them for use on infants when you have no photometer? These are the types of questions and

answers that an engineer working in a developing world hospital needs every day. The proper test equipment isn't available, and the hospital has a desperate need. You can neither release the equipment without testing, nor deny the clinical team the only piece of equipment that could help the patient. This book provides the kinds of practical testing and repairing suggestions that engineers can use when in a poorly equipped hospital, far from a clinical engineering department.

From Pulitzer Prize finalist Annie Jacobsen, the untold USA Today bestselling story of the CIA's secret paramilitary units. Surprise . . . your target. Kill . . . your enemy. Vanish . . . without a trace. When diplomacy fails, and war is unwise, the president calls on the CIA's Special Activities Division, a highly-classified branch of the CIA and the most effective, black operations force in the world. Originally known as the president's guerrilla warfare corps, SAD conducts risky and ruthless operations that have evolved over time to defend America from its enemies. Almost every American president since World War II has asked the CIA to conduct sabotage, subversion and, yes, assassination. With unprecedented access to forty-two men and women who proudly and secretly worked on CIA covert operations from the dawn of the Cold War to the present day, along with declassified documents and deep historical research, Pulitzer Prize finalist Annie Jacobsen unveils -- like never before -- a complex world of individuals working in treacherous environments populated with killers, connivers, and saboteurs. Despite Hollywood notions of off-book operations and external secret hires, covert action is actually one piece in a colossal foreign policy machine. Written with the pacing of a thriller, *Surprise, Kill, Vanish* brings to vivid life the sheer pandemonium and

chaos, as well as the unforgettable human will to survive and the intellectual challenge of not giving up hope that define paramilitary and intelligence work. Jacobsen's exclusive interviews -- with members of the CIA's Senior Intelligence Service (equivalent to the Pentagon's generals), its counterterrorism chiefs, targeting officers, and Special Activities Division's Ground Branch operators who conduct today's close-quarters killing operations around the world -- reveal, for the first time, the enormity of this shocking, controversial, and morally complex terrain. Is the CIA's paramilitary army America's weaponized strength, or a liability to its principled standing in the world? Every operation reported in this book, however unsettling, is legal.

Stryker Brigade Combat Team Weapons Troop (Atp 3-21.91 / Fm 3-21.91)

Written So You Can Understand it

The Light Armored Vehicle 25 (LAV-25) has played a significant role in transforming United States Marine Corps doctrine since its introduction in the early 1980s. The Marine Corps' Light Armored Vehicle program was based on the proven Swiss MOWAG Piranha series of 4x4, 6x6, and 8x8 wheeled vehicles. However, developing organizational units, tactics, and

employment of the weapon system within the force structure of the Marine Corps proved to be more of a challenge than fielding the weapon system. This resulted in multiple re-designations for LAV units within the Corps. The LAV first saw combat in Panama during Operation Just Cause and LAV-25s have fought in every major conflict since, including Operation Enduring Freedom, and Operation Iraqi Freedom. This book covers the design, development, and deployment of this continually successful vehicle.

This 4th edition of *Mastery of Endoscopic and Laparoscopic Surgery* presents both the common procedures residents must master as well as the more challenging procedures required of fellows and practitioners. With 11 new chapters, this edition offers the most extensive coverage of minimally invasive procedures in all areas of surgery. In addition to clear, concise instruction valuable comments from the authors are also included at the end of each chapter. Written in the style of the *Masters of Surgery* series, this book offers the most comprehensive step-by-step text on all procedures including Advances in NOTES procedures. How to rewire your brain to improve virtually every aspect of your life-based on the latest research in neuroscience and psychology on neuroplasticity and evidence-based practices Not long ago, it was thought that the brain you were born with was the brain you would die with, and that the brain cells you had at birth were the most you would ever possess. Your brain was thought to be “hardwired” to function in predetermined ways. It turns out that's not true. Your brain is not hardwired, it's "softwired" by experience. This book shows you how you can rewire parts of the brain to feel more positive about your life, remain calm during stressful times, and improve your social relationships. Written by a leader in the field of Brain-Based Therapy, it teaches you how to activate the parts of your brain that have been underactivated and calm

Tracing the cultural, material, and discursive history of an early manifestation of media culture in the making. Beginning in the late eighteenth century, huge circular panoramas presented their audiences with resplendent representations that ranged from historic battles to exotic locations. Such panoramas were immersive but static. There were other panoramas that moved—hundreds, and probably thousands of them. Their history has been largely forgotten. In *Illusions in Motion*, Erkki Huhtamo excavates this neglected early manifestation of media culture in the making. The moving panorama was a long painting that unscrolled behind a

“window” by means of a mechanical cranking system, accompanied by a lecture, music, and sometimes sound and light effects. Showmen exhibited such panoramas in venues that ranged from opera houses to church halls, creating a market for mediated realities in both city and country. In the first history of this phenomenon, Huhtamo analyzes the moving panorama in all its complexity, investigating its relationship to other media and its role in the culture of its time. In his telling, the panorama becomes a window for observing media in operation. Huhtamo explores such topics as cultural forms that anticipated the moving panorama; theatrical panoramas; the diorama; the "panoromania" of the 1850s and the career of Albert Smith, the most successful showman of that era; competition with magic lantern shows; the final flowering of the panorama in the late nineteenth century; and the panorama's afterlife as a topos, traced through its evocation in literature, journalism, science, philosophy, and propaganda.

Jazz from Detroit explores the city's pivotal role in shaping the course of modern and contemporary jazz. With more than two dozen in-depth profiles of remarkable Detroit-bred musicians, complemented by a generous selection of photographs, Mark Stryker makes Detroit jazz come alive as he draws out significant connections between the players, eras, styles, and Detroit's distinctive history. Stryker's story starts in the 1940s and '50s, when the auto industry created a thriving black working and middle class in Detroit that supported a vibrant nightlife, and exceptional public school music programs and mentors in the community like pianist Barry Harris transformed the city into a jazz juggernaut. This golden age nurtured many legendary musicians—Hank, Thad, and Elvin Jones, Gerald Wilson, Milt Jackson, Yusef Lateef,

Donald Byrd, Tommy Flanagan, Kenny Burrell, Ron Carter, Joe Henderson, and others. As the city's fortunes change, Stryker turns his spotlight toward often overlooked but prescient musician-run cooperatives and self-determination groups of the 1960s and '70s, such as the Strata Corporation and Tribe. In more recent decades, the city's culture of mentorship, embodied by trumpeter and teacher Marcus Belgrave, ensured that Detroit continued to incubate world-class talent; Belgrave protégés like Geri Allen, Kenny Garrett, Robert Hurst, Regina Carter, Gerald Cleaver, and Karriem Riggins helped define contemporary jazz. The resilience of Detroit's jazz tradition provides a powerful symbol of the city's lasting cultural influence. Stryker's 21 years as an arts reporter and critic at the Detroit Free Press are evident in his vivid storytelling and insightful criticism. Jazz from Detroit will appeal to jazz aficionados, casual fans, and anyone interested in the vibrant and complex history of cultural life in Detroit.
