conjunction with technological innovation, and looks at how language has adapted to the challenges of today's digitized world. Most of the GNU Emacs text editor is written in the programming language called Emacs Lisp. You can write new code in Emacs Lisp and install it as an extension to the editor. However, Emacs Lisp is more than a mere "extension language"; it is a full computer programming language in its own right. You can use it as you would any other programming language. Because Emacs Lisp is designed for use in an editor, it

has special features for scanning and parsing text as well as features for handling files, buffers, displays, subprocesses, and so on. Emacs Lisp is closely integrated with the editing facilities; thus, editing commands are functions that can also conveniently be called from Lisp programs, and parameters for customization are ordinary Lisp variables. This manual attempts to be a full description of Emacs Lisp. For a beginner's introduction to Emacs Lisp, see *An Introduction to Emacs Lisp Programming*,

Generally speaking, the earlier chapters describe features of Emacs Lisp that have counterparts in many programming languages, and later chapters describe features that are peculiar to Emacs Lisp or relate specifically to editing. Ferruolo argues that it was the educational values and ideas promoted by the critics--ideas of the unity of knowledge, the need to share learning freely and willingly, and the higher purposes and social importance of education--that first inspired the scholars of Paris to join together to form a single guild. An analysis of the dramatic impact of

new technology on life at work, home, and play explores the potential health, emotional, social, mental, and cultural hazards of our fascination with computer technology

Moldova is having an arduous transition from being a centrally-planned economy to one that is guided by market signals, and this has contributed to poverty. Its agriculture-dominated economy is handicapped by the loss of its traditional markets and the slow restructuring of its

enterprises. As a result, the economy has been shrinking since independence. This report aims to provide a detailed analysis of the situation regarding living standards in the country, and provide a framework for policy for the Government's emerging social assistance program. Chapter 1 examines the composition and distribution of poverty in Moldova. Chapter 2 looks at how income and price shocks have affected the lives of the poor - and motivates the

need for employment-generating growth, especially in agriculture, as the only sure way out of poverty for most Moldovans. Chapter 3 discusses the role of the Moldovan state in easing poverty, and proposes a broad strategy to reform social assistance and social sector reform that best uses the limited Government resources. In its efforts to directly alleviate poverty, the Moldovan Government has to overcome three mutually reinforcing challenges: the

population's high expectations for broad and effective interventions, its own lack of fiscal resources, and the technical difficulties in finding effective targeting mechanisms for Moldova's shallow poverty.

This is a mathematics textbook with theorems and proofs. The choice of topics has been guided by the needs of computer science students. The method of semantic tableaux provides an elegant way to teach logic that is both

theoretically sound and yet sufficiently elementary for undergraduates. In order to provide a balanced treatment of logic, tableaux are related to deductive proof systems. The book presents various logical systems and contains exercises. Still further, Prolog source code is available on an accompanying Web site. From linguistics to the Middle East; foreign affairs to the role of the media; and intellectual responsibility to the situation in East Timor, Noam Chomsky offers a wide-ranging exploration of the issues and ideas that have concerned him most deeply throughout his distinguished career. These essays are drawn from a series of lectures Chomsky gave in Australia in 1995, under the auspices of the East Timor Relief Association. Examining the interplay between language,
