Indonesia's foreign policy reflects the turbulence and change which have been, and remain, a central feature of its political life. First published in 1983, this was the first book to provide a systematic and comprehensive account of the nature and course of Indonesia's foreign policy since independence in 1949. Chapters consider the National Revolution and foundations of future policy, foreign policy in light of domestic needs, and the management of regional order. A product of many visits to Indonesia and interviews with those directly involved in the foreign policy process, Michael Leifer's comprehensive title will of great value to students concerned with the study of foreign policy in Asia, as well as for more general readers with an interest in Indonesia and South-East Asia.

The Institute of Medicine (IOM) Roundtable on Health Literacy focuses on bringing together leaders from the federal government, foundations, health plans, associations, and private companies to address challenges facing health literacy practice and research and to identify approaches to promote health literacy in both the public and private sectors. The roundtable serves to educate the public, press, and policy makers regarding the issues of health literacy, sponsoring workshops to discuss approaches to resolve health literacy challenges. It also builds partnerships to move the field of health literacy forward by translating research findings into practical strategies for implementation. The Roundtable held a workshop March 29, 2012, to explore the field of oral health literacy. The workshop was organized by an independent planning committee in accordance with the procedures of the National Academy of Sciences. The planning group was composed of Sharon Barrett, Benard P. Dreyer, Alice M. Horowitz, Clarence Pearson, and Rima Rudd. The role of the workshop planning committee was limited to planning the workshop. Unlike a consensus committee report, a workshop summary may not contain conclusions and recommendations, except as expressed by and attributed to individual presenters and participants. Therefore, the summary has been prepared by the workshop rapporteur as a factual summary of what occurred at the workshop.

This report examines 24 incidents, resulting in 32 deaths, involving Philippine National Police personnel between October 2016 and January 2017. Human Rights Watch found that the official police reports of these incidents invariably asserted self-defense to justify police killings, contrary to eyewitness accounts that portray the killings as cold-blooded murders of unarmed drug suspects in custody. To bolster their claims, the police routinely planted guns, spent ammunition, and drug packets next to the victims' bodies. No one has been meaningfully investigated, let alone prosecuted, for these killings.

Stalin ordered his execution, but here Peter Palchinsky has the last word. As if rising from an uneasy grave, Palchinsky's ghost leads us through the miasma of Soviet technology and

industry, pointing out the mistakes he condemned in his time, the corruption and collapse he predicted, the ultimate price paid for silencing those who were not afraid to speak out. The

story of this visionary engineer's life and work, as Loren Graham relates it, is also the story of the Soviet Union's industrial promise and failure. We meet Palchinsky in pre-Revolutionary Russia, immersed in protests against the miserable lot of laborers in the tsarist state, protests destined to echo ironically during the Soviet worker's paradise. Exiled from the country, pardoned and welcomed back at the outbreak of World War I, the engineer joined the ranks of the Revolutionary government, only to find it no more open to criticism than the previous regime. His turbulent career offers us a window on debates over industrialization. Graham highlights the harsh irrationalities built into the Soviet system—the world's most inefficient steel mill in Magnitogorsk, the gigantic and ill-conceived hydroelectric plant on the Dnieper River, the infamously cruel and mislocated construction of the White Sea Canal. Time and again, we see the effects of policies that ignore not only the workers' and consumers' needs but also sound management and engineering precepts. And we see Palchinsky's criticism and advice, persistently given, consistently ignored, continue to haunt the Soviet Union right up to its dissolution in 1991. The story of a man whose gifts and character set him in the path of history, *The Ghost of the Executed Engineer* is also a cautionary tale about the fate of an engineering that disregards social and human issues.

The first and so far only Plant Geography of Chile was written about 100 years ago, since when many things have changed: plants have been renamed and reclassified; taxonomy and systematics have experienced deep changes as have biology, geography, and biogeography. The time is therefore ripe for a new look at Chile's plants and their distribution. Focusing on three key issues – botany/systematics, geography and biogeographical analysis – this book presents a thoroughly updated synthesis both of Chilean plant geography and of the different approaches to studying it. Because of its range – from the neotropics to the temperate sub-Antarctic – Chile's flora provides a critical insight into evolutionary patterns, particularly in relation to the distribution along the latitudinal profiles and the global geographical relationships of the country's genera. The consequences of these relations for the evolution of the Chilean Flora are discussed. This book will provide a valuable resource for both graduate students and researchers in botany, plant taxonomy and systematics, biogeography, evolutionary biology and plant conservation.

Drawing on recent scholarship on the history of Western esotericism and religious studies on the importance of millenarian thought in Early Modern Europe, this study provides an innovative re-examination of Peter the Great's Court in early eighteenth-century Russia.
