This book constitutes the thoroughly refereed proceedings of the 12th International Conference on Metadata and Semantic Research, MTSR 2018, held in Limassol, Cyprus, on October 23-26, 2018. The 19 full and 16 short papers presented were carefully reviewed and selected from 77 submissions. The papers are organized in topical sections on metadata, linked data, semantics, ontologies and SKOS; digital libraries, information retrieval, big, linked, social and open data; cultural collections and applications; Knowledge IT Artifacts (KITA) in professional communities and aggregations; Digital Humanities and Digital Curation (DHC); European and national projects; agriculture, food and environment; open repositories, research information systems and data infrastructures.

interfaces and applications, with as much emphasis on results as on current issues. It is aimed at an audience of master students and Ph.D. students, and can be of interest as well for researchers and engineers who want to know more about AI. The book is split into three volumes: - the first volume brings together twenty-three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning (Volume 1. Knowledge representation, reasoning and learning) - the second volume offers a view of AI, in fourteen chapters, from the side of the algorithms (Volume 2. AI Algorithms) - the third volume, composed of sixteen chapters, describes the main interfaces and applications of AI (Volume 3. Interfaces and applications of AI). Implementing reasoning or decision making processes requires an appropriate representation of the pieces of information to be exploited. This first volume starts with a historical chapter sketching the slow emergence of building blocks of AI along centuries. The second volume provides an organized overview of different logical, numerical, or graphical representation formalisms able to handle incomplete information, rules having exceptions, probabilistic and possibilistic uncertainty (and beyond), as well as taxonomies, time, space, preferences, norms, causality, and even trust and emotions among agents. Different types of reasoning, beyond classical deduction, are surveyed including nonmonotonic reasoning, belief revision, updating, information fusion, reasoning based on similarity (case-based, interpolative, or analogical), as well as reasoning about actions, reasoning about ontologies (description logics), argumentation, and negotiation or persuasion between agents. Three chapters deal with decision making, be it multiple criteria, collective, or under uncertainty. Two chapters cover statistical computational learning and reinforcement learning (other machine learning topics are covered in Volume 2). Chapters on diagnosis and supervision, validation and explanation, and knowledge base acquisition complete

Marco da Gagliano's *Quinto libro de madrigali a cinque voci* was published in October 1608, a little less than two years after his previous book. It contains fourteen madrigals for five voices, one for seven, all composed by Gagliano. The poets represented include Giambattista Marino, Giovanbattista Strozzi, both the older and the younger, Cosimo Galletti, and Ottavio Rinuccini. The madrigals of book 5 are quite varied in their style and their treatment of text. Many are brief and remarkably concise, like the canzonetta-influenced madrigals of the *Quarto libro*, and most often set text syllabically to shorter rhythmic values in motives that alternate between homophony (or near homophony) and polyphony, imitative or nonimitative. Some, however, set poetry very differently. A three-part setting of a Marino sonnet, for instance, is filled with virtuoso melismata probably intended for the professional singers of the Medici court. Book 5 also includes a concertato madrigal for seven singers and basso continuo that bears the prescriptive direction "per cantare e sonare" (for voices and instruments) in the basso partbook. Although there is no notational indication of instruments, the basso part lacks text for several measures, and it is likely that it was performed with improvised chords on an instrument. The book also contains two threnodies for Count Cammillo della Gheradesca that are in a somber and more traditional style of polyphony and contrast with the rest of the book's contents.

Uncovering the Hidden Prejudice That Shapes What We See, Think, and Do

Jeanne d'Arc The Book Thief Knopf Books for Young Readers

*We need to talk about racism before it destroys our democracy. And that conversation needs to start with an acknowledgement that racism is coded into even the most ordinary interactions. Every time we interact with another human being, we unconsciously draw on a set of expectations to guide us through the encounter. What many of us in the United States—especially white people—do not recognize is that centuries of institutional racism have inescapably molded those expectations. This leads us to act with implicit biases that can shape everything from how we greet our neighbors to whether we take a second look at a resume. This is tacit racism, and it is one of the most pernicious threats to our nation. In *Tacit Racism*, Anne Warfield Rawls and Waverly Duck illustrate the many ways in which racism is coded into the everyday social expectations of Americans, in what they call *Interaction Orders of Race*. They argue that these interactions can produce racial inequality, whether the people involved are aware of it or not, and that by overlooking tacit racism in favor of the fiction of a “color-blind” nation, we are harming not only our society’s most disadvantaged—but endangering the society itself. Ultimately, by exposing this legacy of racism in ordinary social interactions, Rawls and Duck hope to stop us from merely pretending we are a democratic society and show us how we can truly become one.*

Selected by the Modern Library as one of the 100 best nonfiction books of all time From the Modern Library's new set of beautifully repackaged hardcover classics by Truman Capote—also available are *Breakfast at Tiffany's* and *Other Voices, Other Rooms* (in one volume), *Portraits and Observations*, and *The Complete Stories* Truman Capote's masterpiece, *In Cold Blood*, created a sensation when it was first published, serially, in *The New Yorker* in 1965. The intensively researched, atmospheric narrative of the lives of the Clutter family of Holcomb, Kansas, and of the two men, Richard Eugene Hickock and Perry Edward Smith, who brutally killed them on the night of November 15, 1959, is the seminal work of the "new journalism." Perry Smith is one of the great dark characters of American literature, full of contradictory emotions. "I thought he was a very nice gentleman," he says of Herb Clutter. "Soft-spoken. I thought so right up to the moment I cut his throat." Told in chapters that alternate between the Clutter household and the approach of Smith and Hickock in their black Chevrolet, then between the investigation of the case and the killers' flight, Capote's account is so detailed that the reader comes to feel almost like a participant in the events.

From one of the world's leading experts on unconscious racial bias come stories, science, and strategies to address one of the central controversies of our time: How do we talk about bias? How do we address racial disparities and inequities? What role do our institutions play in creating, maintaining, and magnifying those inequities? What role do we play? With a perspective that is at once scientific, investigative, and informed by personal experience, Dr. Jennifer Eberhardt offers us the language and courage we need to face one of the biggest and most troubling issues of our time. She exposes racial bias at all levels of society—in our neighborhoods, schools, workplaces, and criminal justice system. Yet she also offers us tools to address it. Eberhardt shows us how we can be vulnerable to bias but not doomed to live under its grip. Racial bias is a problem that we all have a role to play in solving.

For decades baseball scouts have beat the bushes for talent, wandering throughout the United States in search of promising young players. But

technology and competition have recently brought about big changes, as potential stars are identified as early as Little League. The largest such scouting and development service, Perfect Game USA, has become the primary pipeline to college and professional baseball, with its participants accounting for more than 70 percent of the players taken in the 2007 amateur draft. This book looks at the history, methods, and impact of Perfect Game USA, which continues to change the landscape of youth baseball.

This book describes efficient and effective techniques for harnessing the power of Linked Data by tackling the various aspects of managing its growing volume: storing, querying, reasoning, provenance management and benchmarking. To this end, Chapter 1 introduces the main concepts of the Semantic Web and Linked Data and provides a roadmap for the book. Next,

Chapter 2 briefly presents the basic concepts underpinning Linked Data technologies that are discussed in the book. Chapter 3 then offers an overview of various techniques and systems for centrally querying RDF datasets, and Chapter 4 outlines various techniques and systems for efficiently querying large RDF datasets in distributed environments. Subsequently, Chapter 5 explores how streaming requirements are addressed in current, state-of-the-art RDF stream data processing. Chapter 6 covers performance and scaling issues of distributed RDF reasoning systems, while Chapter 7 details benchmarks for RDF query engines and instance matching systems. Chapter 8 addresses the provenance management for Linked Data and presents the different provenance models developed. Lastly, Chapter 9 offers a brief summary, highlighting and providing insights into some of the open challenges and research directions. Providing an updated overview of methods, technologies and systems related to Linked Data this book is mainly intended for students and researchers who are interested in the Linked Data domain. It enables students to gain an understanding of the foundations and underpinning technologies and standards for Linked Data, while researchers benefit from the in-depth coverage of the emerging and ongoing advances in Linked Data storing, querying, reasoning, and provenance management systems. Further, it serves as a starting point to tackle the next research challenges in the domain of Linked Data management.

Siddhartha is a 1922 novel by Hermann Hesse that deals with the spiritual journey of self-discovery of a man named Siddhartha during the time of the Gautama Buddha. The book, Hesse's ninth novel, was written in German, in a simple, lyrical style. It was published in the U.S. in 1951 and became influential during the 1960s. Hesse dedicated the first part of it to Romain Rolland and the second to Wilhelm Gundert, his cousin. The word Siddhartha is made

up of two words in the Sanskrit language, siddha (achieved) + artha (what was searched for), which together means "he who has found meaning (of existence)" or "he who has attained his goals". In fact, the Buddha's own name, before his renunciation, was Siddhartha Gautama, Prince of Kapilvastu. In this book, the Buddha is referred to as "Gotama".

Cartea lui Eyal și Li propune cea mai practică și mai realistă cale de a găsi un echilibru între tehnologie și starea de bine. Succesul și fericirea le aparțin celor care își pot controla atenția. Nir Eyal și-a propus să te protejeze de ceea ce îți poate distra atenția, iar cartea lui e plină de vitalitate și de idei care pot fi aplicate în viața de zi cu zi. - Adam Grant Concentrat este un ghid esențial pentru cei care vor să își recupereze atenția, capacitatea de concentrare și viața. - Arianna Huffington Dacă pui preț pe timpul, pe capacitatea de concentrare sau pe relațiile tale, atunci trebuie să citești această carte. Eu pun în practică ideile descoperite în paginile ei. - Jonathan Haidt Trăim într-o lume în care telefonul mobil a devenit o extensie a trupului, în care suntem copleșiți de avalanșe de informații mai mult sau mai puțin utile, în care nu mai știm cum să ne facem timp pentru noi înșine și pentru lucrurile cu adevărat importante din viețile noastre. Pierdem din vedere esențialul și nu mai avem răbdare să ducem la bun sfârșit o sarcină fără să ne lăsăm distrași de tot felul de stimuli exteriori. În Concentrat, NIR EYAL și JULIE LI abordează problemele omului modern în ceea ce privește controlul timpului și vin cu soluțiile potrivite pentru a riposta la tendința dominantă și a ține la distanță tentațiile acaparatoare. Dacă ești unul dintre cei cărora nu le ajunge niciodată timpul și dacă vrei să îți canalizezi atenția doar spre ceea ce merită, ai ocazia să descoperi câteva strategii al căror efect se va face simțit imediat ce le vei pune în practică.

“Five-Plus Tools” is a scouting term that refers to a rare and elite type of amateur baseball prospect. A player with five-plus tools grades out well above average in all five skill areas, known as tools: hitting, power, running, throwing, and fielding. While most baseball fans critique players who are already on the professional level, a scout needs to find raw talent and figure out if they’re the “future.” In Five-Plus Tools, Dave Perkin, who was a professional scout and is currently the Major League Baseball Draft correspondent for Sports Illustrated, breaks down not only what all scouts are looking for, but also how amateur players are evaluated and recognized. Broken up into three sections, Perkin teaches the inner details of amateur scouting, using field reports on athletes he’s scouted over the years. Once the understanding of what a scout looks for is understood,

Perkin delves into the current major leaguers and gives scouting insight on their game, skills, and influence on the sport. Finally, the hot-button issues in baseball are covered, including such points as Sabermetrics, baseball analysis, and an explanation of why few of yesterday's heroes could succeed in modern baseball. "A landmark book in the science of emotions and its implications for ethics and human universals."—Library Journal, starred review In this startling study of human emotion, Dacher Keltner investigates an unanswered question of human evolution: If humans are hardwired to lead lives that are "nasty, brutish, and short," why have we evolved with positive emotions like gratitude, amusement, awe, and compassion that promote ethical action and cooperative societies? Illustrated with more than fifty photographs of human emotions, Born to Be Good takes us on a journey through scientific discovery, personal narrative, and Eastern philosophy. Positive emotions, Keltner finds, lie at the core of human nature and shape our everyday behavior—and they just may be the key to understanding how we can live our lives better.
