This book gives a general view of sequence analysis, the statistical study of successions of states or events. It includes innovative contributions on life course studies, transitions into and out of employment, contemporaneous and historical careers, and political trajectories. The approach presented in this book is now central to the life-course perspective and the study of social processes more generally. This volume promotes the dialogue between approaches to sequence analysis that developed separately, within traditions contrasted in space and disciplines. It includes the latest developments in sequential concepts, coding, atypical datasets and time patterns, optimal matching and alternative algorithms, survey optimization, and visualization. Field studies include original sequential material related to parenting in 19th-century Belgium, higher education and work in Finland and Italy, family formation before and after German reunification, French Jews persecuted in occupied France, long-term trends in electoral participation, and regime democratization. Overall the book reassesses the classical uses of sequences and it promotes new ways of collecting, formatting, representing and processing them. The introduction provides basic sequential concepts and tools, as well as a history of the method. Chapters are presented in a way that is both accessible to the beginner and informative to the expert.

Design patterns, which express relationships between recurring problems and proven solutions, have become immensely popular in the world of software development. More and more software developers are recognizing the supreme usefulness of design patterns and how they ease the design and delivery of software applications. This book builds upon the information presented in the seminal work in this field, Design Patterns: Elements of Reusable Object-Oriented Software, and gives software professionals the information they need to recognize and write their own patterns. Pattern Hatching, written by one of the co-authors of Design Patterns, truly helps the software professional apply one of the most popular concepts in software development.

A Choice Outstanding Academic Title of the Year A CounterPunch Best Book of the Year A Lone Star Policy Institute Recommended Book "A critically important exploration of the political dynamics that have made us one of the most punitive societies in human history. A must-read by one of our most thoughtful scholars of crime and punishment." —Bryan Stevenson, author of *Just Mercy* "A cogent and provocative argument about how to achieve true institutional reform and fix our broken system." —Emily Bazelon, author of *Charged* "If you care, as I do, about disrupting the perverse politics of criminal justice, there is no better place to start than *Prisoners of Politics*." —James Forman, Jr., Pulitzer Prize-winning author of *Locking Up Our Own* The United States has the world's highest rate of incarceration in the world. As awful as that truth is, its social consequences—recycling offenders through an overwhelmed criminal justice system, ever-mounting costs, and a growing class of permanently criminalized citizens—are even more devastating. With the authority of a prominent legal scholar and the practical insights gained through her work on criminal justice reform, Rachel Barkow reveals how dangerous it is to base criminal justice policy on the whims of the electorate and argues for a transformative shift toward data and expertise.

An Introduction

Ecritures digitales aims to demonstrate how digital writing, as new technology, contributes to the emergence of a reconfigured relationship between the human body and the machines, and how this transition influences the Jewish-Christian textual corpus referred to as "the Scriptures".

Ecritures digitales souhaite démontrer de quelle manière l'écriture digitale, en tant que nouvelle technologie, contribue à l'émergence d'une relation innovante entre le corps humain et les machines, et influence le corpus textuel judéo-chrétien désigné comme «les Ecritures».

How does scale affect our understanding of the Holocaust? In the vastness of its implementation and the sheer amount of death and suffering it produced, the genocide of Europe's Jews presents special challenges for historians, who have responded with work ranging in scope from the world-historical to the intimate. In particular, recent scholarship has demonstrated a willingness to study the Holocaust at scales as focused as a single neighborhood, family, or perpetrator. This volume brings together an international cast of scholars to reflect on the ongoing microhistorical turn in Holocaust studies, assessing its historiographical pitfalls as well as the distinctive opportunities it affords researchers.

What has confounded African efforts to create cohesive, prosperous and just states in postcolonial Africa? What has been the long-term impact of the Berlin Conference of 1884-5 on African unity and African statehood? Why is postcolonial Africa haunted by various ethno national conflicts? Is secession and irredentism the solution? Can we talk of ethno-futures for Africa? These are the kinds of fundamental questions that this important book addresses. Sabelo J. Ndlovu-Gatsheni and Brilliant Mhlanga's book introduces the metaphor of the 'northern problem' to dramatise the fact that there is no major African postcolonial state that does not enclose within its borders a disgruntled minority that is complaining of marginalization, domination and suppression. The irony is that in 1963 at the formation of the OAU, postcolonial African leaders embraced the boundaries arbitrarily drawn by European colonialists and institutionalised the principle of inviolability of 'bondage of boundaries' thereby contributing to the

problem of ethno-national conflicts. The successful struggle for independence of the Eritrean people and the secession of South Sudan in 2011 have encouraged other dominated and marginalised groups throughout Africa to view secession as an option. Ndlovu-Gatsheni and Mhlanga successfully assembled competent African scholars to deal exhaustively with various empirical cases of ethno-national conflicts throughout the African continent as well as engaging with such pertinent issues as Pan-Africanism as a panacea to these problems. This important book delves deeper into complex issues of space, languages, conflict, security, nation-building, war on terror, secession, migration, citizenship, militias, liberation, violence and Pan-Africanism.

When the scientific study of the Black Sea Region began in the late 18th and early 19th centuries, initially commissioned by adjacent powers such as the Habsburg and the Russian empires, this terra incognita was not yet considered part of Europe. The eighteen chapters of this volume show a broad range of thematic foci and theoretical approaches - the result of the enormous richness of the European macrocosm and the BSR. The microcosms of the many different case studies under scrutiny, however, demonstrate the historical dimension of exchange between the allegedly opposite poles of 'East' and 'West' and underscore the importance of mutual influences in the development of Europe and the BSR.

This timely and lucid guide is intended for students and scholars working on all historical periods and

topics in the humanities and social sciences--especially for those who do not think of themselves as experts in quantification, "big data," or "digital humanities." The authors reveal quantification to be a powerful and versatile tool, applicable to a myriad of materials from the past. Their book, accessible to complete beginners, offers detailed advice and practical tips on how to build a dataset from historical sources and how to categorize it according to specific research questions. Drawing on examples from works in social, political, economic, and cultural history, the book guides readers through a wide range of methods, including sampling, cross-tabulations, statistical tests, regression, factor analysis, network analysis, sequence analysis, event history analysis, geographical information systems, text analysis, and visualization. The requirements, advantages, and pitfalls of these techniques are presented in layperson's terms, avoiding mathematical terminology. Conceived primarily for historians, the book will prove invaluable to other humanists, as well as to social scientists looking for a nontechnical introduction to quantitative methods. Covering the most recent techniques, in addition to others not often enough discussed, the book will also have much to offer to the most seasoned practitioners of quantification.
