

Technical Collection Cahier Technique No 177

Le présent bulletin décrit les principaux types de matériel motorisé utilisé pour l'application des pesticides. Il donne des précisions sur la conception et montre les types de buses nécessaires pour traiter les cultures et améliorer la sécurité et l'efficacité des opérations de pulvérisation. Le bulletin traite notamment des pulvérisateurs portés et trainés munis de rampe et du matériel pour les traitements des cultures hautes, des arbres, de l'application des granulés et du traitement des semences, des aérosols et de la nébulisation, ainsi que du traitement aérien. Des spécifications pour le matériel de pulvérisation sont fournies, ainsi que des directives concernant la sécurité et l'entretien. Des conseils sont donnés sur le bon choix du matériel. Ce bulletin s'adresse aux ingénieurs agronomes, aux techniciens, aux établissements de formation et à d'autres personnes s'intéressant à ces questions. Il offre des conseils pratiques à ceux qui s'occupent de l'application des pesticides.

First published in 1993. Routledge is an imprint of Taylor & Francis, an informa company.

High voltage engineering is extremely important for the reliable design, safe manufacture and operation of electric devices, equipment and power systems. The 21st International Symposium on High Voltage Engineering, organized by the 90 years old Budapest School of High Voltage Engineering, provides an excellent forum to present results, advances and discussions among engineers, researchers and scientists, and to share knowledge and expertise on high voltage engineering. The proceedings of the conference presents the state of the art technology of the field. The content is simultaneously aiming to help practicing engineers to be able to implement based on the papers and researchers to link and develop ideas.

Rethinking Comparative Law

Methods and Tools in User-Centred Design for Information Technology

As an industrial process, construction is unique. The procurement processes used to achieve the successful completion of built assets requires a different approach to that adopted in most other industries, due to the design of buildings being bespoke and the sites being geographically varied. The procurement process is central to the success of any construction project and many of the problems which impact construction projects can be traced back to the procurement phase, so a good understanding of the methods of procurement, the development of a procurement strategy and the influence it has on project success is essential for all those working in the industry. Much has changed in the global construction industry since publication of the second edition of Building Procurement, for example the increase in debt burden of many major economies, widespread adoption of Building Information Modelling (BIM) Technology in the industry and the United Kingdom's exit from the European Union. This new edition has been rewritten to take account of these significant developments, but at its core it continues to provide a critical examination and review of current procurement practices in the UK, continental Europe (including EU procurement procedures), China, Middle East and Sub-Saharan Africa and the USA. It retains its original strong emphasis on the need for clients to establish achievable objectives which reflect the project business case and focuses on development of suitable strategies and management structures to meet those objectives in the current construction climate. Building Procurement will be essential reading for senior undergraduate and postgraduate students of construction management and practitioners working in all areas of construction management.

This thesis is about the design and the implementation of a resilient grid operation for the distribution grid. This research question is induced by the advancing of three trends: Decarbonisation, decentralisation and digitalisation. These three trends transform the hitherto passive distribution grid into an active system that contains an active operation. The term “resilience” describes capabilities of the system to absorb, to adapt, and to recover from faults and disturbances. This concept is realised on the one hand with the choice of the operation architecture, on the other hand for the choice of possible methods and functions. This thesis develops a distributed-hierarchical operation architecture. For this architecture several methods have been developed that optimally benefit from the operation architecture and that allow the fully automated operation of the distribution grid. For that purpose a heuristic optimisation has been developed to solve problems like voltage profile violations and congestions. Another important method, especially with regard to resilience, is the self-healing capability to resupply clients after permanent faults.

Substation Automation Systems: Design and Implementation aims to close the gap created by fast changing technologies impacting on a series of legacy principles related to how substation secondary systems are conceived and implemented. It is intended to help those who have to define and implement SAS, whilst also conforming to the current industry best practice standards. Key features: Project-oriented approach to all practical aspects of SAS design and project development. Uniquely focusses on the rapidly changing control aspect of substation design, using novel communication technologies and IEDs (Intelligent Electronic Devices). Covers the complete chain of SAS components and related equipment instead of purely concentrating on intelligent electronic devices and communication networks. Discusses control and monitoring facilities for auxiliary power systems. Contributes significantly to the understanding of the standard IEC 61850, which is viewed as a “black box” for a significant number of professionals around the world. Explains standard IEC 61850 – Communication networks and systems for power utility automation – to support all new systems networked to perform control, monitoring, automation, metering and protection functions. Written for practical application, this book is a valuable resource for professionals operating within different SAS project stages including the: specification process; contracting process; design and engineering process; integration process; testing process and the operation and maintenance process.

These OECD Biosafety Consensus Documents identify elements of scientific information used in the environmental safety and risk assessment of transgenic organisms which are common to OECD member countries.

Fifty theoretical essays by distinctively original and influential film critics and filmmakers are grouped in categories having to do with general considerations, structuralism-semiology, political factors, genre, feminism, auteur theory, and mise-en-scene

This is an easily-accessible two-volume encyclopedia summarizing all the articles in the main volumes Kirk-Othmer Encyclopedia of Chemical Technology, Fifth Edition organized alphabetically. Written by prominent scholars from industry, academia, and research institutions, the Encyclopedia presents a wide scope of articles on chemical substances, properties, manufacturing, and uses; on industrial processes, unit operations in chemical engineering; and on fundamentals and scientific subjects related to the field.

This book is concerned with the development of human factors inputs to software design. The aim is to create products which match the requirements and characteristics of users and which offer usable user interfaces. The HUFIT project - Human Factors in Information Technology - was carried out within the European Strategic Programme for Research and Development in Information Technology (ESPRIT) with the objective of enhancing the quality of software design within the European Community. The variety of activities undertaken to achieve this goal are reflected in this book. It describes human factors knowledge and tools for integration in information technology supplier organisations.

During the past few years there has been an dramatic upsurge in research and development, implementations of new technologies, and deployments of actual solutions and technologies in the diverse application areas of embedded systems. These areas include automotive electronics, industrial automated systems, and building automation and control. Comprising 48 chapters and the contributions of 74 leading experts from industry and academia, the Embedded Systems Handbook, Second Edition presents a comprehensive view of embedded systems: their design, verification, networking, and applications. The contributors, directly involved in the creation and evolution of the ideas and technologies presented, offer tutorials, research surveys, and technology overviews, exploring new developments, deployments, and trends. To accommodate the tremendous growth in the field, the handbook is now divided into two volumes. New in This Edition: Processors for embedded systems Processor-centric architecture description languages Networked embedded systems in the automotive and industrial automation fields Wireless embedded systems Embedded Systems Design and Verification Volume I of the handbook is divided into three sections. It begins with a brief introduction to embedded systems design and verification. The book then provides a comprehensive overview of embedded processors and various aspects of system-on-chip and FPGA, as well as solutions to design challenges. The final section explores power-aware embedded computing, design issues specific to secure embedded systems, and web services for embedded devices. Networked Embedded Systems Volume II focuses on selected application areas of networked embedded systems. It covers automotive field, industrial automation, building automation, and wireless sensor networks. This volume highlights implementations in fast-evolving areas which have not received proper coverage in other publications. Reflecting the unique functional requirements of different application areas, the contributors discuss inter-node communication aspects in the context of specific applications of networked embedded systems.

Pour choisir une machine ou un équipement agricole, l'utilisateur fait appel à différentes sources d'information et en particulier aux comptes-rendus d'essais, lorsqu'ils existent. Ce document traite, en priorité, des essais et des évaluations de l'usage des utilisateurs de machines. Il présente également les essais de l'usage des fabricants. Jusqu'à présent les essais ont visé surtout à satisfaire aux besoins des fournisseurs de matériel; des constructeurs et des distributeurs. Une approche différente, plus appliquée, est également nécessaire si l'on veut répondre aux besoins réels des consommateurs. Elle doit pouvoir être mise en oeuvre dans les conditions réelles d'exploitation et sans exiger des dispositifs de mesure très laborieux. Toutefois, l'essai technique ne constitue qu'une partie de l'information nécessaire à l'agriculteur pour juger de l'aptitude d'un matériel à lui donner satisfaction de façon durable dans les conditions spécifiques de son exploitation. La sélection et l'évaluation des matériels exige donc une approche qui tienne compte plus systématiquement qu'auparavant des besoins de l'utilisateur-acheteur. Le document suggère que la diffusion de l'information et du conseil aux agriculteurs soit confiée à un service spécifique en mesure de coordonner le travail des différentes institutions concernées. Loin de cela est possible, ce service devrait s'appuyer sur les institutions qui ont déjà apporté un soutien efficace aux agriculteurs pour résoudre leurs problèmes de mécanisation.

Over the past decades, the field commonly known as comparative law has significantly expanded. The multiplication of journals, the proliferation of scholarship and the creation of courses or summer schools specifically devoted to comparative law attest to its increasing popularity. Within the Western legal tradition, a traditional, black-letter approach to law has proved particularly authoritative. This co-authored book rethinks comparative law's mainstream model by providing both students and lawyers with the intellectual equipment allowing them to approach any foreign law in a more meaningful way.

We live in a world of technical systems designed in accordance with technical disciplines and operated by technically trained personnel—a unique social organization that largely determines our way of life. Andrew Feenberg's theory of social rationality represents both the threats of technocratic modernity and the potential for democratic change.

François de Larrard is Scientific Director of the R&D centre of the LafargeHolcim group and Scientific Director of the French national project Recybéton. He formerly spent almost thirty years at IFSTTAR (formerly LCPC). He has been granted both the Robert l'Hermite medal and the G.H. Tattersall award by RILEM, and is author of two books, including Concrete Mixture-Proportioning which is also published by Taylor & Francis.

A resource for the photographic conservator, conservation scientist, curator, as well as professional collector, this volume synthesizes both the masses of research that has been completed to date and the international standards that have been established on the subject.

Issues in Metal Research / 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Metal Research. The editors have built Issues in Metal Research: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Metal Research in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Metal Research / 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.
