Guidelines for Determination of Optimal Traffic Responsive Plan Selection Control Parameters

Closed-loop traffic control systems can be operated by either Time-of-Day (TOD) mode or Traffic Responsive Plan Selection (TRPS) mode. When properly configured, the TRPS mode has the potential to provide an optimal operation due to its ability to accommodate abnormal traffic conditions such as incidents, special events, and holiday traffic. TRPS mode can also reduce the need for frequent redesign/updates to signal timing plans. To date, there have not been any formal guidelines for selection of robust and optimal TRPS system parameters and thresholds. Consequently, traffic engineers usually revert to the TOD mode of operation for its ease of setup. This report provides a new methodology for robust and optimal selection of TRPS parameters and thresholds. The report presents an innovative framework of TRPS system setup following a comprehensive approach that incorporates a multi-objective evolutionary algorithm and a supervised discriminant analysis. The developed guidelines are presented in simplified tables to facilitate their implementation. Guidelines were verified by using hardware-in-the-loop simulations. Compared to just the worst possible solutions encountered during the optimization, the final solution provided a concurrent savings of 53 percent in delay and 19 percent in stops.

Even the best information is worthless if users can't find it. Providing user-friendly structure and navigation is just as important as providing well-written content. However, structuring user assistance isn't as simple and obvious as it may seem. If you think that your document structure should follow the structure of your product's components and functions: You're wrong. If you think that the type of document that you prefer is the same type of document that your clients prefer: You're wrong. If you think that all the information that you have is important: You're also wrong. This book tells you how to structure, index, and link your documents so that readers actually find the information that your documents contain. Topics covered: General structuring principles that all structural decisions have in common. Choosing media: Should you provide a printed or printable user manual (PDF), online help, or both? What information should go into the user manual, and what information should go into online help? Which help format should you use? Can context-sensitive help calls be implemented? Should you provide interactive features and social features? Planning documents: Should you put all information into one document, or should you supply several user manuals for specific purposes and user groups? How should you name your documents? Planning document sections: What are the major sections that your documents should consist of? Are there any standard sections that you shouldn't forget? Planning topics: What types of information do your clients need? How should you build and name the individual topics within the document? Planning the order of sections and topics: How should you organize the sections and topics within your documents? What comes first? What comes later? Planning navigation: Which navigational devices should you provide in printed documents and in online help systems? Where should you provide links or cross-references and where not? Audience: Technical writers Developers Marketing professionals Product managers

Solution-based casework is an approach to assessment, case planning, and case management that combines what we know from clinical social work with what we value about sound social work practice. It is grounded in family-centered social work and draws from clinical approaches within social work and mental health. By integrating problem- and solution-focused approaches that form the clinical and social work traditions, treatment partnerships are more easily formed between family, caseworker, and service provider. Solution-Based Casework is a skill-based, practice-oriented text that provides the specific guidance that students and new practitioners need in order to make sense quickly of the complex tasks of assessment and case planning in child welfare. The book flows out of a long practice experience, and was developed in consultation with workers and supervisors who were attempting to remedy problems viewed as contributing to recurrent abuse and neglect. It seeks to end adversarial relationships in casework and advocates case plans based on specific outcome skills rather than on those written with vague outcome goals measuring attendance in counseling. It serves as a common conceptual framework for integrating disparate segments of a response network, thereby allowing all providers in a therapeutic system to work toward common goals. The text is divided into three sections. In Section I the conceptual history and theoretical foundations of solution-based casework are presented so that the reader can place this approach to casework within the ongoing professional conversation about what constitutes sound practice. Section II addresses issues of assessment and case planning. Section III focuses on case management issues and how treatment team members experience a solution-based casework approach.
