Insurmountable as the challenges faced by many students may seem, TWR can make a dramatic

is important for two reasons. First it challenges the practice by teachers that one specific method should be used when solving problems. Secondly, it calls into

question the belief that multiple methods would confuse students and retard their learning. Using a case study approach and informed by research conducted by the

student learning. A close reading of the literature reveals that time spent on elucidating concepts rather than on algorithmic methodologies is a critical issue when trying

to have students solve problems with understanding. It is argued that conceptual understanding can be enhanced through the use of multiple methods in an

environment where students can compare, evaluate, and verbally discuss competing methodologies through the facilitation of the instructor. This book focuses on two very useful

methods: proportional reasoning (PR) and dimensional analysis (DA). These two methods are important because they can be used to solve a large number of problems in all

Research: Strategies and Skills For School Libraries

The text that pioneered a constructivist approach to elementary science teaching is based on two fundamental and

and then pursue the finer points. If your student is fascinated by the possibility of a twin star named Nemesis, let them linger over the subject for as long as they can continue to journal about it, and then move on. If your curriculum leads you into an area that is not as fascinating,
