This book brings together the uBuntu jurisprudence of South Africa, as well as the most cutting-edge critical essays about South African jurisprudence on uBuntu. Can indigenou values be rendered compatible with a modern legal system? This book raises some of the most pressing questions in cultural, political, and legal theory. To predict our future, we must look to the extremes. So argues the economist Richard Davies, who takes readers to the margins of the modern economy and beyond. These extreme economies illustrate the forces that test human resilience, drive societies to failure, and promise to shape our collective future. Reviving a foundational idea from the medical sciences, Extreme Economies turns the logic of modern economics on its head by arguing that these outlier societies can teach us more about our own than we might imagine. By adapting to circumstances unimaginable to most of us, the people in these societies are pioneering the economic infrastructure of the future.

Research into the geological processes operating on Mars relies on interpretation of images and other data returned by unmanned orbiters, probes and landers. Such interpretations are based on our knowledge of processes occurring on Earth Terrestrial analog studies therefore play an important role in understanding the geological features observed on Mars. This 2007 book presents direct comparisons between locales on Earth and Mars, and contains contributions from leading planetary geologists to demonstrate the parallels and differences between these two neighboring planets. Mars is characterized by a wide range of geological phenomena that also occur on Earth, including tectonic, volcanic, impact cratering, eolian, fluvial, glacial and possibly lacustrine and marine processes. The book provides terrestrial analogs for data sets from Mars Global Surveyor, Mars Odyssey, Mars Exploration Rovers and Mars Express, and will therefore be a key reference for students and researchers of planetary science.

Katie's Cabbage is the inspirational true story of how Katie Stagliano, a third grader from Summerville, South Carolina, grew a forty-pound cabbage in her backyard and donated it to help feed 275 people at a local soup kitchen. In her own words, Katie shares the story of the little cabbage seedling and the big ideas of generosity and service that motivated her to turn this experience into Katie's Krops, a national youth movement aimed at ending hunger one vegetable garden at a time. Katie's Cabbage reminds us of how small things can grow and thrive when nurtured with tender loving and care and of how one person, with the support of family, friends, and community, can help make a powerful difference in the lives of so many. Katie's Cabbage was illustrated by Karen Heid, associate professor of art education at the University of South Carolina School of Visual Art and Design. Editorial assistance was provided by Michelle H. Martin, a dedicated gardener and the Augusta Baker Chair in Childhood Literacy at the University of South Carolina School of Library and Information Science. Patricia Moore-Pastides, First Lady of the University of South Carolina and author of Greek Revival from the Garden: Growing and Cooking for Life, offers a foreword about her friendship with Katie and her admiration of Katie's dream to end hunger one garden at a time.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been cus tomarily referred to as L systems. Lindenmayer’s invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the in terest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and O (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

The Indian Ocean is famously referred to as the "cradle of globalization," as it facilitated cultural and economic exchanges between Africa, the Arab world, the Indian subcontinent, Southeast Asia, and China, for 5000 years prior to European presence in the region. As this ocean’s significance has gained increasing attention from scholars in recent years, few have examined the ‘human’ dimensions of Indian Ocean exchanges. Including the work of historians, geographers, anthropologists and literary analysts, each essay in this volume addresses a specific human factor, such as the fate of the creole in the Bay of Bengal, creolization as a globalized phenomenon, migrancy and diaspora, the lives of seafarers then and now, and the lives of those who inhabit the ocean’s littoral. This volume is a necessary addition to the field of Indian Ocean studies.

Interfacial Compatibility of SOFC Glass Seals

Instructor’s Manual to Accompany Contemporary Canadian Business Law : Principles and Cases

The Meaning of Contemplation for Social Qualitative Research

UBuntu and the Law

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

This book examines the various interfacial reactions that take place when glass seals come into contact with components of SOFCs in reducing and oxidizing conditions. In developing an understanding of the structure and function of SOFCs, interfacial compatibility is an imperative criterion.

This book addresses the technical challenges of developing sealants to avoid leakage losses at high operating temperatures, which are profoundly impactful to the efficiency of the fuel cell. This resource is important for anyone working with or studying fuel cell design and development, and is a pivotal source of cutting-edge information for research groups actively engaged in developing hermetic and stable seals which show minimum interfacial chemical reaction with interconnect and electrolyte.

Fuel cell technology is quite promising for conversion of chemical energy of hydrocarbon fuels into electricity without forming air pollutants. There are several types of fuel cells: polymer electrolyte fuel cell (PEFC), phosphoric acid fuel cell (PAFC), molten carbonate fuel cell (MCFC),

solid oxide fuel cell (SOFC), and alkaline fuel cell (AFC). Among these, SOFCs are the most efficient and have various advantages such as flexibility in fuel, high reliability, simple balance of plant (BOP), and a long history. Therefore, SOFC technology is attracting much attention as a power plant and is now close to marketing as a combined heat and power generation system. From the beginning of SOFC development, many perovskite oxides have been used for SOFC components: for example, LaMnO -based oxide for the cathode and 3 LaCrO for the interconnect are the most well known materials for SOFCs. The 3 current SOFCs operate at temperatures higher than 1073 K. However, lowering the operating temperature of SOFCs is an important goal for further SOFC development. Reliability, durability, and stability of the SOFCs could be greatly improved by decreasing their operating temperature. In addition, a lower operating temperature is also beneficial for shortening the startup time and decreasing energy loss from heat radiation. For this purpose, faster oxide ion conductors are required to replace the conventional Y O -stabilized ZrO 2 3 2 electrolyte. A new class of electrolytes such as LaGaO is considered to be 3 highly useful for intermediate-temperature SOFCs.

This book offers an account of contemplative reflection in qualitative social research. Focusing on the experiences of the researcher – including sensory and emotional experiences – and the work of the mind in the investigative process, it considers the means by which the researcher ’ s basic assumptions can be analysed and bracketed, so as to shed light on the process by which knowledge is produced. Through an exploration of the methods of meditation, auto-observation and self-reports, epoché, “ contemplative memo-ing ” , and the contemplative diary, the author explores the essential role of subjectivity in qualitative research, providing inspiration for more mindful research. As such, it will appeal to scholars of sociology, anthropology and geography with interests in phenomenology, research methods and the role of the mind in the research process.

This selection of Hardy’s poetry does full justice to its humanity, integrity, humour and evocative power, ranging from charming anthology pieces such as 'Weathers' to the great love poems he wrote after the death of his first wife and the meditations on war and philosophy. The poems - nearly 80 in total - are set in the context of his life and thought, including personal writings by him and those closest to him

The world’s ever-growing demand for power has created an urgent need for new efficient and sustainable sources of energy and electricity. Today’s consumers of portable electronics also demand devices that not only deliver more power but are also environmentally friendly. Fuel cells are an important alternative energy source, with promise in military, commercial and industrial applications, for

example power vehicles and portable devices. A fuel cell is an electrochemical device that directly converts the chemical energy of a fuel into electrical energy. Fuel cells represent the most efficient energy conversion technologies to-date and are an integral part in the new and renewable energy chain (e.g., solar, wind and hydropower). Fuel cells can be classified as either high-temperature or lowtemperature, depending on their operating temperature, and have different materials requirements. This book is dedicated to the study of high temperature fuel cells. In hightemperature fuel cells, the electrolyte materials are ceramic or molten carbonate, while the electrode materials are ceramic or metal (but not precious metal). High operation temperature fuel cells allow internal reforming, promote rapid kinetics with non-precious materials and offer high flexibilities in fuel choice, and are potential and viable candidate to moderate the fast increase in power requirements and to minimize the impact of the increased power consumption on the environment. 'Materials for High Temperature Fuel Cells' is part of the series on Materials for Sustainable Energy and Development edited by Prof. Max Q. Lu. The series covers advances in materials science and innovation for renewable energy, clean use of fossil energy, and greenhouse gas mitigation and associated environmental technologies.

Perovskite Oxide for Solid Oxide Fuel Cells

During the last decades the knowledge of the magnetic properties of the d transition elements and of their metallic alloys and compounds has increased widely. The improvement of preparation techniques for well-defined substances, the development of sophisticated measuring methods and above all the drive to obtain more insight in the origin of magnetic interactions in solids have resulted in the publication of many specific magnetic properties for an abundance of all kinds of metallic materials. The data assembled in this booklet are selected from the comprehensive compilation of magnetic and related properties of metals in the Landolt-Bornstein New Series Group III sub volumes 19a, band c. It has been attempted to include preferentially those properties which are of a basic character and which therefore are most often needed by scientists active in the field of solid state magnetism. In the field of magnetism, there is a gradual transition from the use of cgs/emu units to SI units. It was, however, not intended to represent all data in the units of one system, regardless of how nice this would have been from a systematic point of view. Instead, mostly preference was given to the system of units that was originally used by the authors whose work is quoted. Thus cgs/ emu units occur most frequently. Of colirse the user of the tables and figures is helped in several ways to convert the data to the units which he is most familiar with, see, e. g.

Today's commercial, medical and military electronics are becoming smaller and smaller. At the same time these devices demand more power and currently this power requirement is met almost exclusively by battery power. This book includes coverage of ceramic hybrid separators for micro fuel cells and miniature fuel cells built with LTCC technology. It also covers novel fuel cells and discusses the application of fuel cell in microelectronics.

An exceptionally beautiful and hospitable country, Oman is a researchers delight, with archives and manuscripts, archaeological and ethno-archaeological attractions ranging from pre-Islamic Arabia to the present, and modern multi-tribal communities. Located on the southern edge of the Persian Gulf, where the Arabian Sea and the Indian Ocean meet and control the entrance to the Persian Gulf, it has stood at a commercial and cultural crossroads for centuries. But with commercial sea routes also to Africa and Asia, it is simultaneously a contemporary state that combines modernity and tradition, religion and multiculturalism -- a place where the present meets the past without being bound by it. It is, thus, no accident that Ibadis have played and continue to play an important role in the history of Muslim theology and its political theory, a role that only in recent years has begun to be acknowledged in international academic circles. This volume presents the proceedings of the first international conference dedicated to Ibadism and the Sultanate of Oman, which was held at Aristotle University of Thessaloniki in November 2009. The goal of the conference was to introduce Ibadism and Ibadi Studies to the worldwide research community and, indeed, it has served as the springboard for other conferences and the founding of academic groups dedicated to Ibadism and the Sultanate of Oman. In the first part of this volume, we are guided through Ibadi history, theology, and jurisprudence while the second part opens the reader to a broad vista on the dialectics between religion, society, and politics within contemporary Ibadi communities and especially that of Oman. By introducing Ibadism to the broader academic community, we hope to contribute to the mutual understanding and rapprochement of peoples, cultures, and religions. In this regard, each paper in the present volume has lasting value. (Luxury Edition)

Presents daily words of timeless wisdom and heartfelt advice for people of all walks of life and religious backgrounds on how to find true happiness, serenity, and fulfillment in one's life and bring true peace to the world around.
