This up-to-date book shows how assistive technology can be used in all kinds of classrooms, at all grade levels, to enhance the teaching and learning of students with a wide range of disabilities. The emphasis is on the integration of assistive technology into the curriculum. It addresses the challenges teachers face when using assistive technology to teach new skills to students with disabilities, to increase their independence and productivity, and to provide them with access to the general education curriculum. The text discusses disability categories within the context of school-related tasks and technology-based solutions to avoid misleading readers into simply pairing a certain diagnosis with a certain tech tool. The new edition of Assistive Technology in the Classroom keeps readers abreast of relevant new developments in mobile devices and assistive technology through a new chapter on how to use assistive technology to create visual supports and promote positive behavior, chapter updates on available mobile devices, expanded information on Universal Design for Learning, and additional ideas and discussion on how to match technology tools to a student ' s specific needs and strengths.

The Time of Anthropology provides a series of compelling anthropological case studies that explore the different temporalities at play in the scientific discourses, governmental techniques and policy practices through which modern life is shaped. Together they constitute a novel analysis of contemporary chronopolitics. The contributions focus on state power, citizenship, and ecologies of time to reveal the scalar properties of chronopolitics as it shifts between everyday lived realities and the macro-institutional work of nation states. The collection charts important new directions for chronopolitical thinking in the future of anthropological research.

Global value chains (GVCs) powered the surge of international trade after 1990 and now account for almost half of all trade. This shift enabled an unprecedented economic convergence: poor countries grew rapidly and began to catch up with richer countries. Since the 2008 global financial crisis, however, the growth of trade has been sluggish and the expansion of GVCs has stalled. Meanwhile, serious threats have emerged to the model of trade-led growth. New technologies could draw production closer to the consumer and reduce the demand for labor. And trade conflicts among large countries could lead to a retrenchment or a segmentation of GVCs. World Development Report 2020: Trading for Development in the Age of Global Value Chains examines whether there is still a path to development through GVCs and trade. It concludes that technological change is, at this stage, more a boon than a curse. GVCs can continue to boost growth, create better jobs, and reduce poverty provided that developing countries implement deeper reforms to promote GVC participation; industrial countries pursue open, predictable policies; and all countries revive multilateral cooperation.

Pearson FlexText ... setting you up for success in school and at work The study of economics requires a different style of thinking from what you may encounter in other courses. Economists make extensive use of assumptions to break down complex problems into simple, analytically manageable parts. This analytical style, while not ultimately more demanding than the styles of thinking in other disciplines, feels unfamiliar to most students and requires practice. Our experience has taught us that what first-year economics students want most from a FlexText is help in mastering course material to do well on examinations. We have developed this FlexText to respond specifically to that demand.

These events are sufficiently important to be incorporated into the body of the text rather than just added as boxed-off features. In particular, they stress the lesson policymakers recently learned the hard way: What happens in the ever-expanding part of the financial system that does not involve commercial banks is of vital importance to the entire economy. This exciting text presents students with the underlying economic explanations of why the financial system is organized as it is and how the financial system is connected to the broader economy. Due to the overwhelming success of their principles of economics textbook, Hubbard and O'Brien have employed a similar approach in this textbook: They provide students with a framework that allows them to apply the theory that they learn in the classroom to the practice of the real world. 0133148688 / 9780133148688 Money, Banking, and the Financial System Plus NEW MyEconLab with Pearson eText -- Access Card Package Package consists of: 0132994917 / 9780132994910 Money, Banking, and the Financial System 0133020002 / 9780133020007 NEW MyEconLab with Pearson eText -- Access Card -- for Money, Banking, and the Financial System

For all courses in construction accounting and construction finance, and for courses in engineering economics taught in construction management programs. This book helps construction professionals and construction management students master the principles of financial management, and adapt and apply them to the challenge of profitably managing construction companies. It integrates content that has traditionally been taught through separate accounting, finance, and engineering economics texts. Students learn how to account for a construction company's financial resources; how to manage its costs, profits, and cash flows; how to evaluate different sources of funding a company's cash needs; and how to quantitatively analyze financial decisions. Readers gain hands-on experience through 220 example problems and over 390 practice problems, many of them based on situations actually encountered by the author. This edition adds more than 100 new discussion questions, and presents financial equations and accounting transactions more visually to support more intuitive learning.
