utilizes numerous examples from published research and the pedagogical approach of spaced repetition to provide a step-by-step explanation of how to design, conduct, and present a research study in psychology. Early chapters introduce important concepts for

developing research ideas, subject sampling, ethics, and data collection to help students understand the process of research. Subsequent "Nuts and Bolts" chapters provide more detailed coverage of these topics and examine the various types of research relevant to the field of

psychology. This approach creates a logical scaffolding upon which students can build their knowledge and allows for an easy-to-read, concise format that provides students with the appropriate information required to do research in psychology!

Scientist Within is the only book on the market that teaches students about research methods using a case study approach. All the design-focused chapters present students with a single study described from start to finish. The chapter starts by asking students to

consider a scenario and then walks them through the steps of the study: formulating a research question, performing a literature review, constructing a data collection method, considering ethics, refining the method, gathering data, understanding the statistical results, and reporting the

results in APA style.

Students come away with a practical understanding of the research process and useful practice in the basic steps that comprise all studies.

The book also has excellent pedagogy, starting with clear Learning Outcomes at the beginning of each chapter, "Your Turn"

assessments as the end of each section, and end-of-chapter Review Questions and Applying What You've Learned activities. As part of their class projects, students are often asked to run some statistics and write in APA style. This text has ample support for both, including Appendices

on both topics, as well as in-chapter material modeling writing and reporting in APA style. Best of all, the book comes integrated with new Research in Action activities from the same author team. These activities extend the core mission of the book by putting students in the role of a researcher

and simulating the kinds of decisions they would face in conceptualizing and executing a study. Each chapter includes an activity (a few chapters have more than one), and the activities are called out in the chapter. The new edition features coverage of "fake news," as well as "Our

and other resources.

This book also comes with an unprecedented set of instructor supplements, many of them prepared by the authors themselves.

These include a full instructor's manual, including supplemental examples for each chapter, suggestions for in-class activities

and demonstrations, lab/group project ideas, a feature designed to enhance psychological/information literacy, and suggestions for using end of chapter materials. Instructors also get access to unique PowerPoint slide decks that incorporate the same active learning and

hands-on approach as the textbook. Chapter PowerPoint slides include additional examples, discussion questions, demonstrations and activities built right into the presentation to help bring the material to life. For design chapters, they provide two sets of PowerPoint slides: one set that

incorporates the chapter's research question and a more traditional set that focuses on key concepts.

In *Practical Strategies for Technical Communication*, Mike Markel gives students the essentials they'll need to communicate successfully in today's workplace. The book
