Drawing on a range of different approaches and perspectives, this book attempts to set and develop a new agenda for IPE research. It lays down the theoretical foundations of a new IPE, provides new perspectives on orthodox IPE concerns and highlights previously neglected issues and approaches.

Through life-changing stories, respected thinkers and authentic presentations, Keynote promotes a deeper understanding of the world and gives students the courage and means to express themselves in English. Communication, collaboration and creative thinking drive students towards real 21st century outcomes and encourage them to respond to ideas and find their own voice. Both students and teachers will emerge with new confidence, new ideas and a new determination to communicate in this increasingly information-rich world of Global English.

Organizing involves continuous challenges in the face of uncertainty and change. How is globalization impacting organizations? How will new strategies for a turbulent world affect organizational design? In this second edition of *Organization Theory and Design*, developed for students in the UK, Europe, the Middle East and Africa, respected academics Jonathan Murphy and Hugh Willmott continue to add an international perspective to Richard L. Daft's landmark text. Together they tackle these questions in a comprehensive, clear and accessible study of the subject.

This book is for all those professionals directly or indirectly working in magnetic resonance, and arises from the need to have available a complete and comprehensible guide, in order to recognize, construe and work out almost all the artifacts that can currently be observed in the supplied scanners, being low-field, mid-field, high-field or ultra-high-field. The content includes many demonstrative images and few mathematical formula, moreover simple to be construed, in order to make easily comprehensible the

complex mechanisms hidden behind MR Physics, connected to the artifact under consideration. The text presents a basic introduction to the magnetic resonance and a glossary of used acronyms, so that the principles related to k-space, impulse sequences and relaxation times are clearly understood. Artifacts are effectively classified in chapters and subchapters, according to the underlying cause generating them. Each artifacts group is dealt with following a logic providing for: -Introduction to the specific artifact-related technique.-Modes by which the artifact shows itself, on the basis of images and text.-Technical solutions suited to the resolutions.-Online examinations, videos, focuses, overview tables with access linked to the credentials obtained when purchasing the original text. In this volume, the communicative and neuropsychological correlates of daily interactions are discussed. The predominant account on explaining the construction of meaning by humans is the inter-relational perspective, that postulates an intentional convergence of

meaning arising as a consequence of the active exchanges between people. The neural correlates of communication were illustrated in the light of new empirical results, considering the main topics of: a) language and language development; b) pragmatics and neuropragmatics of communication; c) neurocognition and the cognitive bases of intentions; d) nonverbal communication and emotion contribution to the communicative systems. New methodological approaches are considered, with particular attention to neuroimaging (such as PET and fMRI) and brain stimulation techniques (as MEG and TMS), as well as their application to the clinical field.

Aimed at non-accounting management students, this textbook offers a thorough introduction to management accounting, approaching the subject from a managerial perspective, without sacrificing accuracy or detail.

Neuroengineering is a field of science which studies the properties and functions of neural systems, with the objective of enhancing, repairing or replacing neural function. This field builds on the foundations of experimental and computational neuroscience, electrical engineering, clinical neurology and signal

processing of living neural tissue. It also integrates robotics, neural tissue engineering, nanotechnology, etc. By using the fundamentals of neural networks, neural relations and nervous system functions, devices that can control and interpret signals and produce meaningful responses can be designed. The research in neural engineering is driven by the use of techniques that study how the nervous system functions or malfunctions.

Neuroimaging techniques such as MRI, fMRI, PET and CAT scans, neural networks that model neural systems, neural prostheses that replace or supplement impaired nervous functions, etc. are some of the applications of neuroengineering. Research in this domain is focused on the rehabilitation of brain malfunction or brain damage arising from spinal cord injury, peripheral nerve injury, etc.

There has also been a concerted effort to develop scaffolds for the regrowth of the spinal cord for management of neurological problems. This book discusses the fundamentals as well as modern approaches of this field. It elucidates the concepts and innovative models of neuroengineering around prospective developments with respect to rehabilitation. This book, with its detailed analyses and data, will prove

immensely beneficial to professionals and students involved in this area at various levels.

The growing body of research on business models draws upon a range of sub-disciplines, including strategic management, entrepreneurship, organization studies and management accounting. Business Models: A Research Overview provides a research map for business scholars, incorporating theoretical and applied perspectives. It develops the field of business model research by offering a critique of the field as it has developed to date and provides a guide for future research and theorization. The research performed as a basis for this book improves and extends prior subjective and less-documented work by using a scientific approach to identifying impactful research. The book argues that business model research is a mature field and that future research should focus on performative and ecosystem-based contributions, with the timely identification of four distinct stages of business model research. The study here provokes a new set of research questions, which are addressed in the concluding

passages of Chapters 5-8, as a point of departure for those researching business models. This book is essential primary reading for scholars and practitioners of business models who are looking to seek out new knowledge and build new perspectives. The Language of the News investigates and critiques the conventions of language used in newspapers and provides students with a clear introduction to critical linguistics as a tool for analysis. Using contemporary examples from UK, USA and Australian newspapers, this book deals with key themes of representation - from gender and national identity to 'race'- and looks at how language is used to construct audiences, to persuade, and even to parody. It examines debates in the newspapers themselves about the nature of language including commentary on political correctness, the sensitive use of language and irony as a journalistic weapon. Featuring chapter openings and summaries, activities, and a wealth of examples from contemporary news coverage (including examples from television and radio), The Language of the News broadens the perceptions of the use of language in the news media and is essential reading for students of media and communication, journalism, and English language and linguistics.

Foundations of Strategy, Canadian Edition is a concise text aimed at both undergraduate and MBA students. With the needs of these students in mind, the authors made sure that

the text was written in an accessible style, with a clear, comprehensive approach and sound theoretical depth. An excellent set of current and in-depth Canadian and global cases will show students how to apply the strategy concepts in real-world scenarios. Today's strategy modules are delivered in a wide variety of different formats to a wide range of audiences. Instructors frequently find themselves faced with the challenge of delivering their modules in relatively short time frames to student groups with very diverse educational and employment backgrounds. This text is designed to assist instructors in meeting this challenge by covering the core aspects of strategy as concisely as possible without losing academic depth.

An integrated, global view of macroeconomics, showing the connections between goods markets, financial markets, and labour markets worldwide. This is a book rooted in the real-world: from the major economic crisis of the late 2000s to the profound economic effects caused by

the COVID-19 pandemic, from monetary policy in the US, to Brexit, the problems of the Euro area and growth in China, it will help your students make sense not only of current macroeconomic events but also those that may unfold in the future. Previous edition, 1st, published in 2001. One in a series of books produced under the auspices of the British Association of Social Work which are written with an emphasis on practice and set within a theoretical framework. This volume examines community work, the process of community development, project management and social change.

This classic work explores the vast differences between oral and literate cultures offering a very clear account of the intellectual, literary and social effects of writing, print and electronic technology. In the course of his study, Walter J. Ong offers fascinating insights into oral genres across the globe and through time, and examines the rise of abstract philosophical and scientific thinking. He considers the impact of orality-literacy studies not only on literary criticism and theory but on our very understanding of what it is to be a human being, conscious of self and other. This is a book no reader, writer or

speaker should be without.

This text emphasizes a modern approach to microeconomics by integrating new topics in microeconomic theory and making them accessible to students. These topics include risk and uncertainty, asymmetric information and game theory. Traditional topics are also treated in a clear way with solid applications. Modifications have been made to the text in this edition, these include new information on the theory of the firm, specifically the coverage of cost, and examples are included throughout the text to reinforce the material presented.

Children's literature delights in made-up words, nonsensical terms, and creative nicknames, but how do you translate these expressions into another language?
 This book provides a new approach to translation studies to address the challenges of translating children's literature. It focuses on expressive language (nonsense, names, idioms, allusions, puns, and dialects) and provides guidance for translators about how to translate such linguistic features without making assumptions about the reader's capabilities and without drastically changing the work. The text features effective strategies for both experienced translators and those who are new to the field, including exercises and discussion questions that are particularly beneficial for students training to be translators. This learner-friendly book also offers original contributions to translation theory in light of the translation issues particular to children's literature.

The New International Political Economy

Today's economic environment has interconnectedness levels never thought of before. Financial markets follow similar trends too: portfolios are internationally diversified and financial securities are now more than ever cross listed on foreign exchanges. The aim of this book is to offer both a clear framework and a set of operational tools to understand the relationship between multinational firms and international financial markets. Every topic and chapter is accompanied by several real-world cases aimed at developing the capability to understand and use international finance methodologies and practices around the world. The framework developed throughout the book suggests how to balance three relevant factors: complex financial incentives have to be integrated with institutional obstacles and opportunities and aligned with managerial objectives. While revolving around international markets, with all its features and aspects, the main discussion addresses both macroeconomic and financial components.

The Language of Politics: * examines how both politicians and commentators describe political stances * explores some of the most common linguistic features to be found in political speeches * analyses electioneering through various written texts including manifestos, posters and pamphlets * looks at how politicians answer questions both in the media and in parliament * includes examples of political discourse from Britain, America and Australia * has a comprehensive glossary of terms.

On December 7, 2010, Mario Vargas Llosa was awarded the Nobel Prize in Literature. His Nobel Lecture is a resounding tribute to fiction's power to inspire readers to greater ambition, to dissent, and to political action. "We would be worse than we are without the good books we have read, more conformist, not as restless, more submissive, and the critical spirit, the engine of progress, would not even exist," Vargas Llosa writes. "Like writing, reading is a protest against the insufficiencies of life. When we look in fiction for what is missing in life, we are saying, with no need to say it or even to know it, that life as it is does not satisfy our thirst for the absolute—the foundation of the human condition—and should be better." Vargas Llosa's lecture is a powerful argument for the necessity of literature in our lives today. For, as he eloquently writes, "literature not only submerges us in the dream of beauty and happiness but alerts us to every kind of oppression."

Microeconomics: Principles and Applications provides a lively, rigorous introduction to basic economic theory and its applications. In just 29 chapters, it has been carefully crafted in both content and supporting pedagogy to keep students focused on learning and applying the central ideas used in economic analysis. Its objective is to be a study tool for

students and a complement to, rather than a substitute for, the instructor. Pedagogy and applications are designed to maintain a focus on the fundamentals while allowing instructors the flexibility to bring in additional material.

L'università a portata di mano. L'edizione 2022-2023 della Guida all'Università e ai test di ammissione, aggiornata alla nuova offerta formativa, con una sezione dedicata all'orientamento e con nuove prove simulate, fornisce gli strumenti per conoscere tutti i corsi di laurea, scegliere con consapevolezza la propria università e mettersi alla prova con i test di ammissione. Le università sono suddivise per regione e numerate progressivamente, in modo da poterle reperire con facilità grazie all'indice geografico e all'indice delle università per classi di laurea. Il volume ,completamente rivisto nella struttura, consente così di: • autovalutarsi grazie a un questionario di orientamento; • conoscere il percorso formativo universitario; • scoprire gli atenei regione per regione; • identificare, grazie a delle icone immediate, i corsi di laurea con programmazione; • simulare un test di ammissione, completo di soluzione, così da verificare la propria preparazione.

This open access book offers a cross-sectoral reference for both managers and scientists interested in climate-smart forestry, focusing on mountain regions. It provides a comprehensive analysis on forest issues, facilitating the implementation of climate objectives. This book includes structured summaries of each chapter. Funded by the EU's Horizon 2020 programme, CLIMO has brought together scientists and experts in continental and regional focus assessments through a cross-sectoral approach, facilitating the implementation of climate objectives. CLIMO has provided scientific analysis on issues including criteria and indicators, growth dynamics, management prescriptions, long-term perspectives, monitoring technologies, economic impacts, and governance tools.

On Kindness

Marcus Terentius Varro (116-27 BC) was the greatest polymath of the Roman republic. During his lifetime he authored several hundred books, and though many of them dealt with linguistic topics, the De lingua Latina ('On the Latin language'), the first large-scale linguistic treatment of Latin, was by far his most significant work. Originally consisting of twenty-five volumes - one introductory, followed by six on etymology, six on morphology, and twelve on syntax - only books 5-10 treating etymology and morphology have come down to us in a more or less complete form, though a fair number of fragments of other volumes have been transmitted in other authors. The present two volumes aim to provide a comprehensive treatment of this highly technical text in a new critical edition accompanied by a clear, accurate

translation and full commentary. In Volume I, an introductory study outlines Varro's life and works, analysing his own linguistic usage and setting his insights about language in their historical and intellectual context. His etymology and morphology are contrasted with our own modern methods, yielding important and sometimes surprising insights into how an educated Roman looked at the history of his own language: although his etymology is, by current standards, pre-scientific, it is actually quite often in agreement with modern etymology, while his morphology also has much in common with a modern approach, focusing on the question of how regular language is and providing arguments against and in favour of regularity. Detailed discussions of these and other of Varro's linguistic ideas are brought to the fore in the exhaustive commentary in Volume II, which also sheds much needed light on the work's textual problems, cultural background, and distinctive Varronian style, and will be indispensable to scholars and students of both classics and linguistics.

Kindness is the foundation of the world's great religions and most-enduring philosophies. Why, then, does being kind feel so dangerous? If we crave kindness with such intensity, why is it a pleasure we often deny ourselves? And why—despite our longing—are we often suspicious when we are on the receiving end of it? In this brilliant book, the eminent psychoanalyst Adam Phillips and the historian Barbara Taylor examine the pleasures and perils of kindness. Modern people have been taught to perceive ourselves as fundamentally antagonistic to one another, our motives self-seeking. Drawing on intellectual history,

literature, psychoanalysis, and contemporary social theory, this book explains how and why we have chosen loneliness over connection. On Kindness argues that a life lived in instinctive, sympathetic identification with others is the one we should allow ourselves to live. Bursting with often shocking insight, this brief and essential book will return to its readers what Marcus Aurelius declared was mankind's "greatest delight": the intense satisfactions of generosity and compassion.

Together these countries pioneered new technologies that have made them ever richer.
