Paul was

Cardiovascular  
disease is a  
class of  
diseases that  
involve the  
heart or blood  
vessels, such as

arteries,  
capillaries and  
veins.

Cardiovascular  
diseases remain  
the biggest  
cause of deaths  
worldwide,  
though over the  
last two  
decades,  
cardiovascular  
mortality rates  
have declined in

many high-income countries. At the same time, cardiovascular deaths and disease have increased at a fast rate in low- and middle-income countries. The causes of cardiovascular disease are

diverse but  
atherosclerosis  
and/or  
hypertension are  
the most common  
ones. This book  
is targeted for

and blood, the carrier  
of oxygen within these  
components of the

scholars have long recognized the importance of understanding associations between our bodies and communication messages and processes. In the past decade, there has been an increased focus on the role of physiology in interpersonal

interactions, resulting  
in a surge of research  
exploring topics  
related to  
communication in  
close relationships.  
This growing line of  
research explores  
topics such as  
affectionate  
communication,  
forgiveness,

apprehension, and  
social support.

Contributing to the  
increase in  
physiological research  
on communication  
processes is a greater  
recognition of the bi-  
directional nature of  
the associations  
between  
communication and  
the body. Researchers

physiological  
outcomes of  
communication  
episodes (e.g., stress  
responses to conflict  
conversations), as well  
as the effects of  
physiology on  
communication
