In governments challenged by budget deficits and declining public trust, these reform efforts seek to improve policy decisions and public management. Along the way, program efficiency and effectiveness help rebuild public confidence in government. Whether through regular measurement of program inputs, activities, and outcomes, or through episodic one-shot studies, performance monitoring plays a central role in the most important current reform efforts. It explains why there is interest in performance monitoring in a given setting, why it has failed or created uncertainties, and identifies criteria for improving its design and use. One of the challenges this book offers is the need to consider dimensions of performance beyond the traditional ones of economy, efficiency, and effectiveness. With an increasingly diverse, interdependent, and uncertain public sector environment, for some stakeholders meeting objectives fixed some time ago may not be as important as the capacity to adapt to current and future change. In this vein, the contributors address a

The current economic and political climate places ever greater pressure on public organizations to deliver services in a cost-efficient way. Focused on the costs of service delivery, governments across the world have introduced a series of business like practices ¿ from performance management to public-private partnership ¿ in the belief that these will increase the efficiency of their public services. However, both the debate about public service efficiency and the policies and practices introduced to advance it, have developed without a coherent account of what efficiency means in this context and how it should be realized.
