

The Eyes Of The Skin Architecture And The Senses

Their Eyes Were Watching God is a 1937 novel by African-American writer Zora Neale Hurston. It is considered a classic of the Harlem Renaissance of the 1920s, and it is likely Hurston's best known work. First published in 1996, *The Eyes of the Skin* has become a classic of architectural theory. It asks the far-reaching question why, when there are five senses, has one single sense – sight – become so predominant in architectural culture and design? With the ascendancy of the digital and the all-pervasive use of the image electronically, it is a subject that has become all the more pressing and topical since the first edition's publication in the mid-1990s. Juhani Pallasmaa argues that the suppression of the other four sensory realms has led to the overall impoverishment of our built environment, often diminishing the emphasis on the spatial experience of a building and architecture's ability to inspire, engage and be wholly life enhancing. For every student studying Pallasmaa's classic text for the first time, *The Eyes of the Skin* is a revelation. It compellingly provides a totally fresh insight into architectural culture. This third edition meets readers' desire for a further understanding of the context of Pallasmaa's thinking by providing a new essay by architectural author and educator Peter MacKeith. This text combines

Read PDF The Eyes Of The Skin Architecture And The Senses

both a biographical portrait of Pallasmaa and an outline of his architectural thinking, its origins and its relationship to the wider context of Nordic and European thought, past and present. The focus of the essay is on the fundamental humanity, insight and sensitivity of Pallasmaa's approach to architecture, bringing him closer to the reader. This is illustrated by Pallasmaa's sketches and photographs of his own work. The new edition also provides a foreword by the internationally renowned architect Steven Holl and a revised introduction by Pallasmaa himself.

Featuring four essays by Peter Zumthor, this volume exhibits the essence of Zumthor's architectural ideas.

Buildings have often been studied whole in space, but never before have they been studied whole in time. *How Buildings Learn* is a masterful new synthesis that proposes that buildings adapt best when constantly refined and reshaped by their occupants, and that architects can mature from being artists of space to becoming artists of time. From the connected farmhouses of New England to I.M. Pei's Media Lab, from "satisficing" to "form follows funding," from the evolution of bungalows to the invention of Santa Fe Style, from Low Road military surplus buildings to a High Road English classic like Chatsworth—this is a far-ranging survey of unexplored essential territory. More than any other human artifacts, buildings improve with

Kevin is entranced when he finds a pair of sunglasses that turn his desires into reality, but then things start to get out of control.

Novel, translated by Joachim Neugroschel. Bataille's scandalous STORY OF THE EYE, written under the pseudonym Lord Auch, centers around the exploits of a young couple exploring the utmost boundaries of the sacred and profane. This hallucinatory melding of sex and religion has lost none of its transgressive power since its original publication in the 1920s, and prefigures Bataille's later studies of death and sensuality, including EROTISM and THE TEARS OF EROS, also published by City Lights and available from SPD.

After enduring a vicious bear attack in the Russian Far East's Kamchatka Peninsula, a French anthropologist undergoes a physical and spiritual transformation that forces her to confront the tenuous distinction between animal and human. In the Eye of the Wild begins with an account of the French anthropologist Nastassja Martin's near fatal run-in with a Kamchatka bear in the mountains of Siberia. Martin's professional interest is animism; she addresses philosophical questions about the relation of humankind to nature, and in her work she seeks to partake as fully

as she can in the lives of the indigenous peoples she studies. Her violent encounter with the bear, however, brings her face-to-face with something entirely beyond her ken—the untamed, the nonhuman, the animal, the wild. In the course of that encounter something in the balance of her world shifts. A change takes place that she must somehow reckon with. Left severely mutilated, dazed with pain, Martin undergoes multiple operations in a provincial Russian hospital, while also being grilled by the secret police. Back in France, she finds herself back on the operating table, a source of new trauma. She realizes that the only thing for her to do is to return to Kamchatka. She must discover what it means to have become, as the Even people call it, medka, a person who is half human, half bear. *The Eye of the Wild* is a fascinating, mind-altering book about terror, pain, endurance, and self-transformation, comparable in its intensity of perception and originality of style to J. A. Baker's classic *The Peregrine*. Here Nastassja Martin takes us to the farthest limits of human being.

In our current global networked culture that puts so much emphasis on the virtual and the visual, the mind and the body have become detached and ultimately disconnected. Though physical appearance is idolised for its sexual appeal and its social identity, the role of the body in developing a full understanding of the physical world and the human condition has become neglected. The potential of the human body as a knowing entity – with all our senses as well as our entire bodily functions being structured to produce and maintain silent knowledge together – fails to be recognised. It is only through the unity of mind and body that craftsmanship and artistic work can be fully realised. Even those endeavours that are generally regarded as solely intellectual, such as writing and thinking, depend on this union of mental and manual skills. In *The Thinking Hand*, Juhani Pallasmaa reveals the miraculous potential of the human hand. He

shows how the pencil in the hand of the artist or architect becomes the bridge between the imagining mind and the emerging image. The book surveys the multiple essences of the hand, its biological evolution and its role in the shaping of culture, highlighting how the hand–tool union and eye–hand–mind fusion are essential for dexterity and how ultimately the body and the senses play a crucial role in memory and creative work. Pallasmaa here continues the exploration begun in his classic work *The Eyes of the Skin* by further investigating the interplay of emotion and imagination, intelligence and making, theory and life, once again redefining the task of art and architecture through well-grounded human truths.

The allure of mobile, portable architecture is worldwide and centuries old. From the desert tents of the Bedouin to the silvery capsules of the Airstream trailer, mobile architecture has inspired designers with its singular characteristics of lightness, transience, and practicality. In "More Mobile", the follow-up to her groundbreaking 2002 book *Mobile*, Jennifer Siegal explores the ever-growing range of possibilities of portable, demountable structures. From serious Refuge Wear to the playful Bar Rectum and the practical Kunsthallen, "More Mobile" explores the working methods and finished work of the most exciting

contemporary designers and presents today's most dynamic, active mobile structures in beautiful color images, detailed drawings, and thoughtful text. Contributors include Studio-Orta, Dré Wapenaar, Andrea Zittel, Andrew Maynard, Andreas Vogler, Horden Cherry Lee Architects, N55, Atelier Bow-Wow, Mark Fisher Studio, MMW, LOT-EK, and the Office of Mobile Design. A foreword by Jude Stewart discusses life on the move, while an introduction by William J. Mitchell considers the house as a robot in which to live.

In *The Eyes Of Love* by Zelma Orr released on Jun 24, 1983 is available now for purchase.

In this first novel of the exhilarating Agents of the Crown series, a man who will become the original MI6 agent protects England and Her Majesty Queen Elizabeth I from Spain's nefarious plan to crush the Age of the Enlightenment. After centuries locked in an endless cycle of poverty, persecution, and barbarity, Europe has finally emerged into the Age of Enlightenment. Scientists, philosophers, scholars, and poets alike believe this to be a new era of reason and hope for all. But the forces of darkness haven't completely dissipated, as Spain hunts and butchers any who dare to defy its ironclad Catholic orthodoxy. Only one nation can fight the black shadow that threatens this new age, and that is Britain, now ruled by a brilliant young Queen Elizabeth I. But although she may be brave and headstrong, Elizabeth knows she cannot win this war simply by force of arms. After her armies have been slashed in half, her treasury is on its knees. Elizabeth needs a new kind of weapon forged to fight a new kind of war, in which stealth

and secrecy, not bloodshed, are the means. In this tense situation, Her Majesty's Secret Service is born with the charismatic John Dee at its head. A scholar, a soldier, and an alchemist, Dee is loyal only to the truth and to his Queen. And for her, the woman he's forbidden from loving, he is prepared to risk his life. A visceral and heart-pumping historical thriller, *The Eyes of the Queen* is perfect for fans of Ken Follett and Dan Brown.

Estimation of the Time Since Death remains the foremost authoritative book on scientifically calculating the estimated time of death postmortem. Building on the success of previous editions which covered the early postmortem period, this new edition also covers the later postmortem period including putrefactive changes, entomology, and postmortem r

How Buildings Learn

The Embodied Image: Imagination and Imagery in Architecture Juhani Pallasmaa All artistic and architectural effects are evoked, mediated and experienced through poeticised images. These images are embodied and lived experiences that take place in 'the flesh of the world', becoming part of us, at the same time that we unconsciously project aspects of ourselves on to a conceived space, object or event. Artistic images

Read PDF The Eyes Of The Skin Architecture And The Senses

have a life and reality of their own and they develop through unexpected associations rather than rational and causal logic. Images are usually thought of as retinal pictures but profound poetic images are multi-sensory and they address us in an embodied and emotive manner. Architecture is usually analysed and taught as a discipline that articulates space and geometry, but the mental impact of architecture arises significantly from its image quality that integrates the various aspects and dimensions of experience into a singular, internalised and remembered entity. The material reality is fused with our mental and imaginative realm. The book is organised into five main parts that look at in turn: the image in contemporary culture; language, thought and the image; the many faces of the image; the poetic image; and finally the architectural image. The Embodied Image is illustrated with over sixty images in pairs, which are diverse in subject. They range from scientific images to historic artistic and architectural masterpieces. Artworks span Michelangelo and Vermeer to Gordon Matta-Clark and architecture takes in Modern Masters such as Mies van der Rohe, Le Corbusier and Alvar Aalto, as well as significant contemporary works by Steven Holl and Daniel Libeskind.

"Timing, skill, and talent all play an important role in creating a great photograph, but it is perhaps the most basic, primary element-the photographer's eye-which is most crucial. In *The Eyes of the City* Richard Sandler not only showcases decades-worth of his strong eye for street photography, but also the eyes of his subjects as he catches them looking into his camera at just the right moment. From 1977 to September 11th 2001, Richard regularly walked through Boston and New York City, encountering all that

Read PDF The Eyes Of The Skin Architecture And The Senses

the streets had to offer, and the results are presented here, many for the first time. Sandler credits his fascination with street life to his years in New York as a teenager in the 1960s. Young Sandler, a frequent truant, spent much of his time in a very different Times Square than we know today. His quests were to buy illegal fireworks and visit the arcades and side shows, particularly Hubert's Flea Circus on 42nd Street. Manhattan was a cyclone of faces- some at play, many clearly suffering. All eyes, ears, and heart, Sandler was sensitive to it all as a kid peering into this adult world. Such early impressions would come to play a significant role in his later street photography. Living in Boston in 1977, and after two careers involved in helping others, as a natural foods chef and acupuncturist, Sandler realized an overwhelming desire to do something for himself, alone. As if on cue, a late 1940s Leica appeared in his life and he hit the Boston streets in an experimental mood. He shot in Boston for three productive years and then moved back home to photograph an edgy, nervous, angry, dangerous New York City. In the 1980s crime and crack were on the rise and their effects were devastating the city. Graffiti exploded onto surfaces everywhere and the Times Square, East Village, and Harlem streets were riddled with drugs, while in midtown the rich wore furs in vast numbers and ogreed was good. In the 1990s the city experienced drastic changes to lure in corporate interests and tourists and the results were directly felt on the streets as rents were raised and several neighborhoods were sanitized, making them ghosts of what, to many, made them formerly exciting. Throughout these turbulent and triumphant years Sandler paced the streets with all his knowledge of what the city was, ever on the lookout for what his eye connected to as it transformed and changed the

Read PDF The Eyes Of The Skin Architecture And The Senses

lives of everyone who lived in it. For better and for worse, one was simply on the street in public space, bathing in the comforts, or terrors, of the human sea and Sandler's work is the marbled evidence of this beauty mixing with decay as only his eyes could capture it."

Young African American children enjoy the activities of a typical day at school.

The Pritzker-winning architect outlines the creative process he employs while designing the atmosphere of his houses, describing in nine short and self-observant chapters his efforts to instill a feeling of harmonious presence into his environments.

Touching the World

The Eyes of the Skin Architecture and the Senses John Wiley & Sons

'You cannot fix this world alone, selkie.' 'I know. But, when we die, all that is left are shadows of our lives preserved in the memories of those who remain. I plan on leaving an exceptionally long shadow, filled with ripples of moonlight for those I helped, and darker than the worst of nightmares for those who wronged us.' How far would you go to save your skin? I'm a selkie, trapped above the waves until I can recover my skin. Humans used to call us seal-wives many years ago - before they broke the planet. I

thought that less humans, after the warming, would mean less danger. My kind believed our world was finally recovering. We were wrong. Up here, the magic is fading and Old Ones like me are being traded as trophies for rich and powerful humans to display in collections. Without the Old Ones, the magic fades, without magic, the planet dies. Humankind has gone too far and someone has to put a stop to it, I just wasn't expecting it to be me. As the selkie begins her hunt, far to the south on his enormous pleasure ship, Barge, Lord Sal hunts for missing Old Ones with a grand plan to leave his own mark on the world. Icidro and Prince Ulises are searching for them too, and this is a world where money talks louder than morals.

The Death of Drawing explores the causes and effects of the epochal shift from drawing to computation as the chief design and communication medium in architecture. Drawing both framed the thinking of architects and organized the design and construction process to place architects at its center. Its displacement by building information modeling (BIM) and computational design recasts both the terms in which architects think and their role in building production. Author David Ross Scheer explains that, whereas drawing allowed architects to represent ideas in form, BIM and computational design simulate experience, making building behavior or performance the primary object of design. The author explores many ways in which this displacement is affecting architecture: the dominance of performance criteria in the evaluation of design decisions; the blurring of the separation of design and construction; the undermining of

architects' authority over their projects by automated information sharing; the elimination of the human body as the common foundation of design and experience; the transformation of the meaning of geometry when it is performed by computers; the changing nature of design when it requires computation or is done by a digitally-enabled collaboration. Throughout the book, Scheer examines both the theoretical bases and the practical consequences of these changes. *The Death of Drawing* is a clear-eyed account of the reasons for and consequences of the displacement of drawing by computational media in architecture. Its aim is to give architects the ability to assess the impact of digital media on their own work and to see both the challenges and opportunities of this historic moment in the history of their discipline.

"After more than forty years, Lucy Daniels, author of the prize-winning *Caleb, My Son*, returns with a new novel, *The Eyes of the Father*, with the same vigor and passion but with a honed wisdom and wealth of insight. Daniels is a remarkably gifted writer who sings a tremblingly beautiful song." -Dannye Romine Powell, author of *Parting the Curtains: Interviews with Southern Writers*

"As a black woman artist who deals with race and identity in my paintings, I resonated with the inner conflicts of Lucy Daniels' beautifully drawn characters in *The Eyes of the Father*." -Beverly McIver, Artist

"Simple clarity lit onto layers of complex emotions are the brushstrokes by which Lucy Daniels paints her tale of a South never rid of its history. *The Eyes of the Father* sings to a soulful rhythm of sustenance in the battle between tradition and its invisible enemy,

indifference." -Martin Tucker, Writer/Editor As a small child in Los Angeles, blue-eyed, red-haired, black-skinned Lily Price, daughter of a flamboyant white musician and a beautiful black singer, glories in the delight her father shows for her and her strikingly "special" appearance. But when tragedy brings Lily and her mother back east to the rigidly conservative home of her fundamentalist minister grandfather in Millboro, North Carolina, "special" is viewed as "freak." Lily's emotional response to this loss is only one of several with which this story demonstrates the power the past wields over the present.

A Novel

Vision for Tomorrow

Thermal Delight in Architecture

Seeds for Architectural Thought

In the Eye of Heaven

The Eyes of the City

Buildings shape our identity and sense of self in profound ways that are not always evident to architects and town planners, or even to those who think they are intimately familiar with the buildings they inhabit. Architecture and the Mimetic Self provides a useful theoretical guide to our unconscious behaviour in relation to buildings, and explains both how and why we are

drawn to specific elements and features of architectural design. It reveals how even the most uninspiring of buildings can be modified to meet our unconscious expectations and requirements of them—and, by the same token, it explores the repercussions for our wellbeing when buildings fail to do so. Criteria for effective architectural design have for a long time been grounded in utilitarian and aesthetic principles of function, efficiency, cost, and visual impact. Although these are important considerations, they often fail to meet the fundamental needs of those who inhabit and use buildings. Misconceptions are rife, not least because our responses to architecture are often difficult to measure, and are in large part unconscious. By bridging psychoanalytic thought and architectural theory, *Architecture and the Mimetic Self* frees the former from its preoccupations with interpersonal human relations to address the vital relationships that we establish with our nonhuman environments. In addition to providing a guide to the unconscious behaviours that are most relevant for evaluating architectural design, this book explains how our relationships with the built environment inform a more expansive

and useful psychoanalytic theory of human relationship and identity. It will appeal to psychoanalysts and analytical psychologists, architects, and all who are interested in the overlaps of psychology, architecture, and the built environment. Bristling with intelligence and shimmering with romance, this novel tests the boundary between history and myth. Patrick Lewis arrives in Toronto in the 1920s and earns his living searching for a vanished millionaire and tunneling beneath Lake Ontario. In the course of his adventures, Patrick's life intersects with those of characters who reappear in Ondaatje's Booker Prize-winning *The English Patient*. 256 pp.

In recent years we have seen a number of dramatic discoveries within the biological and related sciences. Traditional arguments such as "nature versus nurture" are rapidly disappearing because of the realization that just as we are affecting our environments, so too do these altered environments restructure our cognitive abilities and outlooks. If the biological and technological breakthroughs are promising benefits such as extended life expectancies, these same discoveries also have the potential to improve in significant

ways the quality of our built environments. This poses a compelling challenge to conventional architectural theory... This is the first book to consider these new scientific and humanistic models in architectural terms. Constructed as a series of five essays around the themes of beauty, culture, emotion, the experience of architecture, and artistic play, this book draws upon a broad range of discussions taking place in philosophy, psychology, biology, neuroscience, and anthropology, and in doing so questions what implications these discussions hold for architectural design. Drawing upon a wealth of research, Mallgrave argues that we should turn our focus away from the objectification of architecture (treating design as the creation of objects) and redirect it back to those for whom we design: the people inhabiting our built environments. Leading neuroscientists and architects explore how the built environment affects our behavior, thoughts, emotions, and well-being. Although we spend more than ninety percent of our lives inside buildings, we understand very little about how the built environment affects our behavior, thoughts, emotions, and well-being. We are biological beings whose senses and neural systems

have developed over millions of years; it stands to reason that research in the life sciences, particularly neuroscience, can offer compelling insights into the ways our buildings shape our interactions with the world. This expanded understanding can help architects design buildings that support both mind and body. In *Mind in Architecture*, leading thinkers from architecture and other disciplines, including neuroscience, cognitive science, psychiatry, and philosophy, explore what architecture and neuroscience can learn from each other. They offer historical context, examine the implications for current architectural practice and education, and imagine a neuroscientifically informed architecture of the future.

Architecture is late in discovering the richness of neuroscientific research. As scientists were finding evidence for the bodily basis of mind and meaning, architecture was caught up in convoluted cerebral games that denied emotional and bodily reality altogether. This volume maps the extraordinary opportunity that engagement with cutting-edge neuroscience offers present-day architects. Contributors Thomas D. Story of the Eye
The Thinking Hand

Our thermal environment is as rich in cultural associations as our visual, acoustic, olfactory, and tactile environments. This book explores the potential for using thermal qualities as an expressive element in building design. Until quite recently, building technology and design has favored high-energy-consuming mechanical methods of neutralizing the thermal environment. It has not responded to the various ways that people use, remember, and care about the thermal environment and how they associate their thermal sense with their other senses. The hearth fire, the sauna, the Roman and Japanese baths, and the Islamic garden are discussed as archetypes of thermal delight about which rituals have developed—reinforcing bonds of affection and ceremony forged in the thermal experience. Not only is thermal symbolism now obsolete but the modern emphasis on central heating systems and air conditioning and hermetically sealed buildings has actually damaged our thermal coping and sensing mechanisms. This book for the solar age could help change all that and open up for us a new dimension of architectural experience. As the cost of energy continues to skyrocket, alternatives to the use of mechanical force must be developed to meet our thermal

Read PDF The Eyes Of The Skin Architecture And The Senses

needs. A major alternative is the use of passive solar energy, and the book will provide those interested in solar design with a reservoir of ideas.

Intended both as an introductory text for students and professionals in the field as well as an accessible read for the general public, Primer on Architecture (working title) addresses the basic principles of architecture and uncovers its ongoing influence in contemporary culture. The volume is organized in a series of chapters based on key architectural themes--space, time, matter, gravity, light, silence, dwelling, ritual, memory, landscape, and place--with an introductory essay for each chapter that includes a wide variety of historical examples from around the world followed by more in depth analyses of key buildings that further exemplify the theme of a particular chapter. By combining a broad historical sweep with a jargon-free architectural study of space and the direct experience of architecture, this volume will be a unique introduction to architecture as a timeless and enduring art.

In The Eye of God, a Sigma Force novel, New York Times bestselling author James Rollins delivers an apocalyptic vision of a future predicted by the distant past. In the wilds of Mongolia, a research satellite has crashed, triggering an explosive search for its valuable cargo: a code-black physics project connected to the study of dark energy—and a shocking image of the eastern seaboard of the United States in utter ruin. At the Vatican, a package arrives containing two strange artifacts: a skull scrawled with ancient Aramaic and a tome bound in human skin. DNA evidence reveals that both came from the same body: the long dead Mongol king Genghis Khan. Commander Gray Pierce and Sigma Force set out to discover a truth tied to the fall of the Roman Empire, to a mystery going back to the birth of Christianity, and to a weapon hidden for centuries that holds the fate of humanity.

A collection of the writing of the highly influential architect, Juhani Pallasmaa, presented in short, easily accessible, and condensed ideas ideal for students Juhani Pallasmaa is one of Finland's most distinguished

Read PDF The Eyes Of The Skin Architecture And The Senses

architects and architectural thinkers, publishing around 60 books and several hundred essays and shorter pieces over his career. His influential works have inspired undergraduate and postgraduate students of architecture and related disciplines for decades. In this compilation of excerpts of his writing, readers can discover his key concepts and thoughts in one easily accessible, comprehensive volume. Inseminations: Seeds for Architectural Thought is a delightful collection of thoughtful ideas and compositions that float between academic essay and philosophical reflection. Wide in scope, it offers entries covering: atmospheres; biophilic beauty; embodied understanding; imperfection; light and shadow; newness and nowness; nostalgia; phenomenology of architecture; sensory thought; silence; time and eternity; uncertainty, and much more. Makes the wider work of Pallasmaa accessible to students across the globe, introducing them to his key concepts and thoughts Exposes students to a broad range of issues on which Pallasmaa has a view Features an alphabetized structure that makes serendipitous discovery or linking of concepts more likely Presents material in short, condensed manner that can be easily digested by students Inseminations: Seeds for Architectural Thought will appeal to undergraduate students in architecture, design, urban studies, and related disciplines worldwide.

Losing his inheritance when a knight's believed-dead son turns up alive, Durand inadvertently participates in a murder and

finds himself in the service of a duke's disgraced son, a situation that eventually causes him to participate anonymously in a series of tournaments. A first novel. Reprint.

Jesus Christ is arguably the most famous man who ever lived. His image adorns countless churches, icons, and paintings. He is the subject of millions of statues, sculptures, devotional objects and works of art. Everyone can conjure an image of Jesus: usually as a handsome, white man with flowing locks and pristine linen robes. But what did Jesus really look like? Is our popular image of Jesus overly westernized and untrue to historical reality? This question continues to fascinate. Leading Christian Origins scholar Joan E. Taylor surveys the historical evidence, and the prevalent image of Jesus in art and culture, to suggest an entirely different vision of this most famous of men. He may even have had short hair.

The Searing Portrayal Of War That Has Stunned And Galvanized Generations Of Readers An immediate bestseller upon its original publication in 1939, Dalton Trumbo's stark, profoundly troubling masterpiece about the horrors of World War I brilliantly crystallized the uncompromising brutality of war and became the

most influential protest novel of the Vietnam era. Johnny Got His Gun is an undisputed classic of antiwar literature that's as timely as ever. "A terrifying book, of an extraordinary emotional intensity."--The Washington Post "Powerful. . . an eye-opener." --Michael Moore "Mr. Trumbo sets this story down almost without pause or punctuation and with a fury amounting to eloquence."--The New York Times "A book that can never be forgotten by anyone who reads it."--Saturday Review
Brilliant, witty, scathing, The Australian Ugliness is the classic postwar account of Australian society, how we live in the environments we create, and the consequences of our failure to think about how we live.

still renowned for uncovering innumerable archaic facts, lost artefacts, ancient maps, and obscure historical documents. Her quiet life is about to change when Banqui, an archaeologist, enlists her services to find The Eyes of Tamburah: legendary gemstones that bestow great magic on their wielder. These ancient objects can tip the balance of power and give whoever possesses them complete control of the city. But chaos erupts when The Eyes are stolen soon after they're found - and Shyla is blamed for the theft. Forced to flee, with the Prince's soldiers and the Priestess' deacons on her trail, Shyla must recover the jewels and clear her name. A quest that will unearth secrets even more valuable than The Eyes of Tamburah themselves...

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes

competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

What if we designed for all of our senses? Suppose for a moment that sound, touch, and odor were treated as the equals of sight, and emotion considered as important as cognition. What would our built environment be like if sensory response, sentiment, and memory were critical design factors, the equals of structure and program? In *Sensory Design*, Joy Monice Malnar and Frank Vodvarka explore the nature of our responses to spatial constructs--from various sorts of buildings to gardens and outdoor spaces, to constructions of fantasy. To the degree that this response can be calculated, it can serve as a typology for the design of significant spaces, one that would sharply contrast with the Cartesian model that dominates architecture today. In developing this typology, the authors consult the environmental sciences, anthropology, psychology, and architectural theory, as well as the spatial analysis found in literary depiction. Finally, they examine the opportunities that CAVE and other immersive virtual reality technologies present in furthering a new, sensory-oriented design paradigm. The result is a new philosophy of design that both celebrates our sensuous occupation of the built environment and creates more humane design. A revolutionary approach to the built environment that embraces all of our senses and modes of understanding.

When Hannah Powers sustains a head injury, her prom queen world turns from white to black. During her best friend, Emily's funeral, she sees a white-gray ghost image radiating around Emily's casket, but no outline around Emily. This convinces Hannah that she is brain damaged even though her

neuropsychologist tells her she is not. Then, she is plunged into a terrifying world of being able to predict death before it happens without being able to do anything about it.

Atmospheres

Skin is the border of our body and, as such, it is that through which we relate to others but also what separates us from them. Through skin, we speak: when we display it, when we tan it, when we tattoo it, or when we mute it by covering it with clothes. Skin exhibits social relationships, displays power and the effects of power, explains many things about who we are, how others perceive us and how we exist in the world. And when it gets sick, it turns us into monsters. In Skin, Sergio del Molino speaks of these monsters in history and literature, whose lives have been tormented by bad skin: Stalin secretly taking a bath in his dacha, Pablo Escobar getting up late and shutting himself in the shower, Cyndi Lauper performing a commercial for a medicine promising relief from skin disease, John Updike sunburned in the Caribbean, Nabokov writing to his wife from exile, 'Everything would be fine, if it weren't for the damned skin.' As a psoriasis sufferer, Sergio del Molino includes himself in this gallery of monsters through whose stories he delves into the mysteries of skin. What is for some a badge of pride and for others a source of anguish and shame, skin speaks of us and for us when we don't speak with words.
