"The funny, defiant memoir of Sarah Ramey's years-long battle with a mysterious illness that doctors thought was all in her head--but wasn't. A revelation and an inspiration for millions of women whose legitimate health complaints are ignored. In her darkly funny and courageous memoir, Sarah Ramey recounts the decade-long saga of how a seemingly minor illness in her senior year of college turned into a prolonged and elusive condition that destroyed her health but that doctors couldn't diagnose or treat. Worse, as they failed to cure her, they hinted that her problems were all in her head. The Lady's

Handbook for Her Mysterious Illness is a memoir with a mission: to help the millions of (mostly) women who suffer from unnamed or misunderstood conditions: autoimmune illnesses like fibromyalgia and chronic fatigue syndrome, chronic Lyme disease, chronic pain, and many more. Sarah's pursuit of a diagnosis and cure for her own mysterious illness becomes a page-turning medical mystery that reveals a newly emerging understanding of modern illnesses as ecological in nature. Her book will open eyes, change lives, and ultimately change medicine"--

The author addresses both common infections and those presenting a greater challenge in diagnosis. Discussions focus on principles of management, as opposed to details, and place emphasis on determining risk factors and on clinical evaluation, not on performing non-discriminating laboratory tests. An ability to recognise symptoms of serious illness is essential for all front-line professionals in health care. Presented here are the red flag indicators of major disease in need of urgent intervention and the amber flag warnings of a need for urgent assessment. Each is linked to a reason why intervention is required to aid understanding and recall. The Little Book of Red Flags is a practical handbook to help early diagnosis of life-threatening conditions. The authors, Dr Ian Hill-Smith MD MRCP FRCGP and Dr Gina Johnson MB BS MSc MRCGP are highly experienced GP's who run accredited diploma courses in urgent care and are co-authors, along with their colleague Dr Chirag Bakhai, of the best-selling Minor Illness Manual, now in its 5th edition. There is a dearth of written work relating specifically to the emergency care of the child. Why this should be

the case is perhaps not as perplexing as it may initially appear: although children make up between 25% and 30% of the attendance of many emergency departments, constituting approximately 3.5 million attendances a year (Royal College of Paediatrics and Child Health (RCPCH) 1999, 2007), there has until recently been little specific provision made for them. Whilst not addressing all of the challenges it is hoped that this work will provide some of the necessary knowledge for emergency nurses and nurse practitioners, emergency care practitioners, medical care practitioners, physiotherapy practitioners, pre-hospital staff and medical staff working in emergency departments, minor injury units, walk-in centres, out of hours services and other emergency care settings, that will enable them to enhance the care of the child with minor injury or illness.
