This book addresses core questions

about the role of materials in general and of wood in particular in the construction of string instruments used in the modern symphony orchestra – violins, violas, cellos and basses. Further attention is given to materials for classical

guitars, harps, harpsichords and pianos. While some of the approaches discussed are traditional, most of them depend upon new scientific approaches to the study of the structure of materials, such as for example wood cell structure,

which is visible only using modern high resolution microscopic techniques. Many examples of modern and classical instruments are examined, together with the relevance of classical techniques for the treatment of wood. Composite

materials, especially designed for soundboards could be a good substitute for some traditional wood species. The body and soundboard of the instrument are of major importance for their acoustical properties, but the study also

are examined and compared with more recently grown woods available to current makers. The role of varnish in the appearance and acoustics of the final instrument is also discussed, since it has often been proposed as a 'secret

Aspects related to strings are
commented. As well as discussing
these subjects, with many
illustrations from classical and
contemporary instruments, the book
gives attention to conservation and

restoration of old instruments and the physical results of these techniques. There is also discussion of the current value of old instruments both for modern performances and as works of art having great monetary value. The

book will be of interest and value to researchers, advanced students, music historians, and contemporary string instrument makers. Musicians in general, particularly those playing string instruments, will also find its revelations fascinating. It will also

Richard Chronister was one of the pedagogy greats of his time. During the last forty years of the 20th century, he was a driving force for better piano teaching and better training of piano teachers. His influence reached from

large universities to small independent studios, and his name was linked with both the most basic principles and the most recent research. His accomplishments were legendary. He started the first university degree program in piano pedagogy, served on six different faculties, and developed a

new piano method. He was co-founder of the National Conference on Keyboard Pedagogy and the founder and editor of Keyboard Companion magazine. All his professional life he asked searching questions, such as: How can I build on children's innate love of music? How can I teach so that

my students keep learning, practicing and making music? How can I teach my students to become independent learners? What can I apply to my teaching from discoveries of the past and of my own time? How can I become an acute observer of what my students are doing? And of what

teachers whom I observe are doing?
And of what I am doing as a teacher?
This compendium contains
Chronister's best answers to these
questions and many more. They come
from his articles, addresses and
lectures. Whether speaking or writing,
his style is always lucid, informal and

engaging. He never pretends to have the final answer, and invited his audience to consider his advice and reach their own conclusions. This book deserves a place in the library of every serious piano teacher!

Examinations of music signification have been an essential component in thinking about music for millennia, but it is only in the last few decades that music signification has been established as an independent area of study. During this time, the field has grown exponentially, incorporating a
