This brief anthology for introductory sociology is a collection of 24 short readings that illustrate key concepts in sociology, relate to the everyday lives of students, and spark good classroom discussions. The selections represent four theoretical traditions in sociology (functionalism, symbolic interaction, conflict theory, feminism) and show the range and diversity of sociology and the people who practice it. The book is designed for instructors who want to expose students to some original scholarship in their first sociology course, but who do not want to adopt a comprehensive reader along with the core text they

are using.

The stress that comes with being a first responder has been known to lead to depression, anxiety, substance abuse, and suicide. However, few clinicians are informed about these health concerns and how to adequately treat them in this population. Therefore, there is an urgent need for practitioners to understand the latest information regarding treatments that will be useful to this specific population. *Mental Health Intervention and Treatment of First Responders and Emergency Workers* is an essential reference source that focuses on the latest research for diagnosing and treating mental health issues experienced by emergency personnel and seeks to generate awareness and inform clinicians about the unique circumstances encountered by these professionals. While highlighting topics including anxiety disorders and stress management, this book is ideally designed for clinicians, therapists, psychologists, psychiatrists, practitioners, medical professionals, EMTs, law enforcement, fire departments, military, academicians, researchers, policymakers, and students seeking current research on psychological therapy methods regarding first responders.

This volume encompasses the range of issues encountered by language scholars who teach and research in departments of languages and cultures within the higher education system, predominantly in Australia, but touching other universities worldwide. Related studies on language planning, methodology or pedagogy have focused on one or more of these same issues, but rarely on their totality. Intersections as a metaphor running discreetly through the essays in this volume, connects them all to a lived reality. The field of languages and cultures, as it is practised and reflected

upon in Australian universities, is essentially an interdisciplinary and interconnecting space - one in which linguistic and disciplinary diversities meet and join forces, rather than collide or disperse along different pathways. The international and local studies featured here focus on language planning, new pedagogies and language reclamation and link to meeting points and commonalities. They show that language scholars are increasingly finding themselves on common ground as they tackle issues of policy and practice affecting their field, whether within their institutions, within the tertiary system, or within the framework of government policy.

When John Beilein arrived at University of Michigan in 2007, the once-proud men's basketball program was adrift after failing to reach the NCAA Tournament for nine straight seasons. Over the next twelve years, he became the program's all-time winningest coach, reached two national championship games, won four Big Ten championships and produced eight NBA first-round draft picks. In an age of ethical lapses throughout college basketball, Beilein succeeded without a hint of impropriety. As much a teacher as a coach, he consistently

identified undervalued recruits, taught them his innovative offensive system and carefully developed them into better players--an approach to the game that drove his unprecedented rise from high school junior varsity coach to head coach of the Cleveland Cavaliers. This book examines his tenure at Michigan in detail for the first time.

A NEW YORK TIMES BESTSELLER “Brilliant and enthralling.” —The Wall Street Journal A paradigm-shifting book from an acclaimed Harvard Medical School scientist and one of Time’s most influential people. It’s a seemingly undeniable truth that aging is inevitable. But what if everything we’ve been taught to believe about aging is wrong? What if we could choose our lifespan? In this groundbreaking book, Dr. David Sinclair,

leading world authority on genetics and longevity, reveals a bold new theory for why we age. As he writes: “Aging is a disease, and that disease is treatable.” This eye-opening and provocative work takes us to the frontlines of research that is pushing the boundaries on our perceived scientific limitations, revealing incredible breakthroughs—many from Dr. David Sinclair’s own lab at Harvard—that demonstrate how we can slow down, or even reverse, aging. The key is activating newly discovered vitality genes, the descendants of an ancient genetic survival circuit that is both the cause of aging and the key to reversing it. Recent experiments in genetic reprogramming suggest that in the near future we may not just be able to feel younger, but actually become younger. Through a page-turning narrative, Dr. Sinclair invites you into the process of scientific discovery and reveals the emerging technologies and simple lifestyle changes—such as intermittent fasting, cold exposure, exercising with the right intensity, and eating less meat—that have been shown to help us live younger and healthier for longer. At once a roadmap for taking charge of our own health destiny and a bold new vision for the future of humankind, *Lifespan* will forever change the way we think about why we age and what we can do about it.

Despite increased awareness of sexual diversity, older people's accounts of sex and intimacy remain marginalised. This edited volume addresses diversity in sexual and intimate experience later in life (50+) and captures international research and analysis relating to intersectional identities. Contributors explore how being older intersects with

differences of ethnicity, gender, sexuality and class. Offering a critical focus and original contribution to an emerging, although still relatively neglected field, this collection extends knowledge concerning intimacies, practices and pleasures for those thought to represent normative, non-normative and 'new normative' forms of sexual identification and expression.

The Professionalisation of Women's Sport draws upon the expertise of a range of scholars from the fields of sport sociology, sport history, sport economics to critically discuss the complex and often fragmented histories of women's involvement in professional sport.

“Seeing Mad” is an illustrated volume of scholarly essays about the popular and influential humor magazine Mad, with topics ranging across its 65-year history—up to last summer’s downsizing announcement that Mad will publish less new material and will be sold only in comic book shops. Mad magazine stands near the heart of post-WWII American humor, but at the periphery in scholarly recognition from American cultural historians, including humor specialists. This book fills that gap, with perceptive, informed, engaging, but also funny essays by a variety of scholars. The chapters, written by experts on humor, comics, and popular culture,

cover the genesis of Mad; its editors and prominent contributors; its regular features and departments and standout examples of their contents; perspectives on its cultural and political significance; and its enduring legacy in American culture.

Casino games and traditional card games have rich and idiosyncratic histories, complex subcultures and player practices, and facilitate the flow of billions of dollars each year through casinos and card rooms, and between professional players and amateurs. They have nevertheless been overlooked by game scholars due to the negative ethical weight of “gambling” – with such

games pathologized and labelled as deviance or mental illness, few look beyond to unpick the games, their players, and their communities. The Casino, Card and Betting Game Reader offers 25 chapters studying the communities playing these games, the distinctive cultures and practices that have emerged around them, their activities and beliefs and interpersonal relationships, and how these games influence – both positively and negatively – the lives and careers of millions of game players around the world. It is the first of a new series of edited collections, Play Beyond the Computer, dedicated to exploring the play of games beyond computers and games consoles.
