Nestled between

Read PDF The Strawberry Picker

the Chesapeake
Bay and the
Atlantic Ocean,
and stretching
from Hampton
Roads to
Assateague
Island,
Virginia's
Eastern Shore
is a distinctly
southern place
with an

Read PDF The Strawberry Picker

exceptionally
southern taste.

In this
inviting
narrative,
Bernard L.

Herman welcomes
readers into
the

communities,
stories, and
flavors that
season a land

Read PDF The Strawberry Picker

where the
distance from
tide to tide is
often less than
five miles.

Blending
personal
observation,
history,
memories of
harvests and
feasts, and
recipes, Herman

Read PDF The Strawberry Picker

tells of life
along the
Eastern Shore
through the
eyes of its
growers,
watermen,
oyster and clam
farmers,
foragers,
church cooks,
restaurant
owners, and

Read PDF The Strawberry Picker

everyday
residents. Four
centuries of
encounter,
imagination,
and invention
continue to
shape the
foodways of the
Eastern Shore
of Virginia,
melding
influences from

Indigenous
peoples,
European
migrants,
enslaved and
free West
Africans, and
more recent
newcomers.
Herman reveals
how local
ingredients and
the cooks who

Read PDF The Strawberry Picker

have prepared
them for the
table have
developed a
distinctly
American
terroir--the
flavors of a
place
experienced
through its
culinary and
storytelling

Read PDF The Strawberry Picker

traditions.

This terroir flourishes even as it confronts challenges from climate change, declining fish populations, and farming monoculture.

Herman reveals this resilience through the

Read PDF The Strawberry Picker

recipes and
celebrations
that hold
meaning, not
just for those
who live there
but for all
those folks who
sit at their
tables--and
other tables
near and far.
At its peak,

Read PDF The Strawberry Picker

Oregon produced
21 percent of
the nation's
total
commercial
strawberry
production.
However, since
1971, Oregon's
share of
strawberry
production has
been declining

Read PDF The Strawberry Picker

steadily. In fact, for the last three years strawberry production in Oregon constitutes only 8 percent of the nation's total production, which is the

Read PDF The Strawberry Picker

lowest since the end of the Korean War (Figure 1). Among other factors, the increase in harvest cost without an offsetting increase in the farm prices of strawberries,

Read PDF The Strawberry Picker

is the main
cause for the
continuing
decline of
strawberry
production in
Oregon.

Decrease in the
supply of
strawberry
pickers is the
main cause for
the upward

Read PDF The Strawberry Picker

trend of the
strawberry
harvest cost in
Oregon.

Particularly,
since 1973, due
to enactment of
the child labor
law, the
shortage in the
supply of
strawberry
pickers in

Read PDF The Strawberry Picker

Oregon has intensified, causing further escalation in harvest cost. Thus, in order to alleviate the problems associated with harvest cost, since 1967, Oregon has been actively

Read PDF The Strawberry Picker

seeking to
mechanize its
strawberry
harvest. The
principal
objective of
this thesis has
been to
evaluate the
economic
feasibility of
mechanical
strawberry

Read PDF The Strawberry Picker

harvest in
Oregon. As
demonstrated in
Chapter V,
depending on
the assumptions
about the
quality and the
average yield
of the
strawberry
varieties that
would

Read PDF The Strawberry Picker

eventually be
harvested
mechanically,
and the
efficiency of
the harvester;
the expected
savings per
acre to the
strawberry
growers from
the use of
mechanical

Read PDF The Strawberry Picker

harvester was shown to range from a net saving of \$523.50 to a net loss of \$186.76 (Table 9). Even though negative savings are shown to appear when extremely unfavorable

Read PDF The Strawberry Picker

conditions are assumed, in the majority of cases discussed in Chapter V, the implementation of mechanical strawberry harvesting in Oregon is found to be associated with

Read PDF The Strawberry Picker

significant
positive
returns to the
growers. In
addition, in
Chapter VI,
under certain
conditions
which are
expected to
prevail if
mechanization
of strawberry

Read PDF The Strawberry Picker

harvest become a reality in Oregon, the annual gross and net 'social rate of returns' were estimated to be 330 percent and 95.7 percent respectively. The difference between the

Read PDF The Strawberry Picker

gross and net social rate of return is the wage loss of the displaced workers. Based on the above social return figures and the estimated savings to the growers, it appears that

Read PDF The Strawberry Picker

mechanical
strawberry
harvesting is
an economically
viable
alternative
that could
eventually
solve the
problem of the
growing
shortage of
strawberry

Read PDF The Strawberry Picker

of your mind! This book will train you to do this - after reading it only once!

Nearly all the U.S.' fresh market strawberries produced in the fields are hand-harvested.

Existing
mechanical

Read PDF The Strawberry Picker

harvesters induce excessive crop damage and cannot compete with the dexterity and speed of farmworkers.

During manual harvest of strawberries in conventional raised-bed systems, pickers

Read PDF The Strawberry Picker

walk inside the furrows, pick fruit from the plants on both sides, and deposit them into a tray carried by a wheelbarrow-like picking cart. Studies have shown that pickers spend up to 22% of the harvest time on

Read PDF The Strawberry Picker

making round trips to and from the headlands to deliver their full trays. Mechanized labor aids such as cross-row conveyors have previously been proposed to increase productivity by reducing these

Read PDF The Strawberry Picker

non-productive times. However, such harvest aids cause worker underutilization and difficult field maneuvering due to their large size, and degraded ergonomics, because pickers lose their chance to stand erect

Read PDF The Strawberry Picker

and take breaks from the prolonged stooped work. As a solution, small robotic carts are being developed, whose goal is to supply pickers with empty trays and transport full trays to unloading stations at the

Read PDF The Strawberry Picker

edges of a field. These robots can offer easier field deployment, improved picker ergonomics, and the ability to match individual picker productivity. To improve labor management and optimize the

Read PDF The Strawberry Picker

design and operation of strawberry harvest aids, picking time statistics are required.

However, such data is not available. The first step in this study was to formulate a set of

Read PDF The Strawberry Picker

conditional linear mixed models (LMMs) to model the amount of time required by a picker to fill an empty tray with harvested crop (i.e., the picking time). The LMMs were based on different combinations of

Read PDF The Strawberry Picker

the following influencing factors: picker speed, time of day, plant spacing, and picking cart type. The significance of effects of these factors was investigated and the LMMs were rated using cross-

Read PDF The Strawberry Picker

validation (CV) techniques. The LMMs were also evaluated using a new dataset collected during the following year's harvest season. The best predictive LMM was found to be a heterogeneous model with picker

Read PDF The Strawberry Picker

speed, time of day, and picking cart type factors. The model had a prediction error of 134.9 s based on 10-fold CV, and 136.8 s based on leave-one-out CV (LOOCV). The selected model predicts the a priori mean

Read PDF The Strawberry Picker

picking time and its standard error for any given combination of factor levels. In robot-aided strawberry harvesting, pickers' non-productive walking and waiting times are replaced with a

Read PDF The Strawberry Picker

new waiting time for robots to arrive with empty trays. Real-time prediction of temporal distributions of future service requests has been shown to improve robot scheduling, and therefore, picker

Read PDF The Strawberry Picker

productivity, due to reducing robot-induced waiting times. In the second part of this study, two mechanistic grey models (GM1 and GM2) were developed to predict the next tray-transport request times

Read PDF The Strawberry Picker

during robot-aided strawberry harvesting. Both models rely on real-time mass of harvested crop to predict when a tray capacity is going to be reached. A picking cart, similar to the standard carts

Read PDF The Strawberry Picker

currently in use, was designed and instrumented with load cells, a real-time kinematic global positioning system (RTK GPS), a microcontroller, and an inertial measurement unit (IMU). This

Read PDF The Strawberry Picker

instrumented cart works in sync with tray-transporting robots and monitors and communicates a picker's location and real-time mass of harvested crop to them wirelessly. The first model

Read PDF The Strawberry Picker

(GM1) predicts the next transport request time by adding the a priori mean picking time obtained from the previously developed predictive black box LMM, and the beginning time of a cycle, whereas,

Read PDF The Strawberry Picker

the second model (GM2) fits a simple linear regression (SLR) to the load cell data in real-time. In order to evaluate the performances of the two models, a set of load cell output time series was obtained

Read PDF The Strawberry Picker

during manual strawberry harvesting procedures. Except for one tray, both GM1 and GM2 successfully generated prediction intervals for the next transport request time. In

Read PDF The Strawberry Picker

general, the predictions made by GM2 were more accurate than those by GM1 because they were more directly dependent on the measured data rather than the a priori knowledge of the process,

Read PDF The Strawberry Picker

which could not immediately adapt to dynamic changes in the environment. It was also demonstrated that by performing Bayesian updating on the predicted mean picking time, the

Read PDF The Strawberry Picker

prediction accuracy would improve. Almost all of the strawberry production in the U.S. is done based on uniform field management techniques. Creating yield maps of strawberries

Read PDF The Strawberry Picker

allows for variable-rate and site-specific applications of inputs, which can improve productivity and reduce environmental pollution. The third part of this study demonstrates

Read PDF The Strawberry Picker

that the instrumented picking carts could also function as yield-monitoring systems, independently from the robots. A yield map for an approximately 300 m² plot of a strawberry field

Read PDF The Strawberry Picker

was generated. During the yield-monitoring experiment, 13.5 trays, each with a capacity of about 4.2 kg, were filled with fruit. The mean prediction accuracy of the mass of full trays measured by the load cells was

Read PDF The Strawberry Picker

calculated to be 4.8%. The predictive models developed in this work lay the groundwork for optimization of scheduling and deployment of autonomous harvest-aiding robots in strawberry fields.

Read PDF The Strawberry Picker

However, the application of methodologies established in the present work is not limited to strawberries and can potentially be extended to other specialty crops such as cherry tomatoes and table grapes, as

Read PDF The Strawberry Picker

well.
