In *The New Rules of Lifting for Women*, authors Lou Schuler, Cassandra Forsythe and Alwyn Cosgrove present a comprehensive strength, conditioning and nutrition plan destined to revolutionize the way women work out. All the latest studies prove that strength training, not aerobics, provides the key to losing fat and building a fit, strong body. This book refutes the misconception that women will "bulk up" if they lift heavy weights. Nonsense! It's tough enough for men to pack on muscle, and they have much more of the hormone necessary to build muscle: natural testosterone. Muscles need to be strengthened to achieve a lean, healthy look. Properly conditioned muscles increase metabolism and

The program demands that women put down the "Barbie" weights, step away from the treadmill and begin a strength and conditioning regime for the natural athlete in every woman. The New Rules of Lifting for Women will change the way women see fitness, nutrition and their own bodies.

They have a vested interest in optimizing their athletes ' strength, power, and conditioning, as well as their joint health and longevity. #2 Bodyweight training is highly skewed toward pushing exercises, and this must be taken into account when

designing a program. Because of the wonders of gravity, all it takes to get a great pressing workout is to sink your body toward the ground and then push your body upward. #3 Bodyweight training is the most convenient form of resistance, and it can provide you with a great workout. You can gain great functional fitness in terms of strength, power, balance, and endurance from progressive bodyweight training, and recent research shows that you can enhance your flexibility to the same or even a greater degree through resistance training than from a stretching routine. #4 You will continue to challenge your neuromuscular system as you progress to more difficult variations and increase the number of repetitions you perform with the various exercises. Your body will respond by synthesizing more
