Autism is in the

more than ever as

new research and information appears almost daily.

Although in many ways this is a positive development it also presents challenges to families and practitioners who want to keep up with the latest developments and

are left to sift through new information by themselves to see what is credible and relevant for them. Each of us needs a personal research assistant who can determine which information we need to pay attention to and let

us know how it
might affect our
daily work and the
children we are
living with or serve.
Since we each don't
have our own
research assistants
on staff, I am
delighted to
recommend this
wonderful book by

Autism is a word most of us are familiar with. But do we really know what it means?

Children with autism are challenged by the most essential human behaviors. They have difficulty interacting

with other people-
often failing to see
people as people rather
than simply objects in
their environment.

They cannot easily
communicate ideas
and feelings, have great
trouble imagining what
others think or feel,
and in some cases
spend their lives
speechless. They

frequently find it hard
to make friends or even
bond with family

members. Their
behavior can seem
bizarre. Education is
the primary form of
treatment for this
mysterious condition.

This means that we
place important
responsibilities on
schools, teachers and

While we have since amassed a substantial body of research, researchers have not adequately communicated with one another, and their findings have not been integrated into a proven curriculum. Educating Children with Autism outlines an interdisciplinary

Thus, the four main sections of the book include these four major ways professionals work with parents: as their advocates, their trainers, their trainees, and their reciprocal emotional support source. To the extent this effort was successful, we acknowledge
