Development of various energy sources continues across North America and around the world, raising questions about social and economic consequences for the places and communities where these activities occur. Energy Impacts brings together important new research on site-level social, economic, and behavioral impacts from large-scale energy development. Featuring conceptual and empirical multidisciplinary research from leading social scientists, the volume collects a broad range of perspectives to

understand North America's current energy uses and future energy needs. Twelve chapters from respected scholars in a variety of disciplines present new ways to consider and analyze energy impact research. Focused on varied energy topics, geographies, and disciplines, each chapter includes a policy brief that summarizes the work and provides "key takeaways" to apply the findings to policy and public discourse. Meaningful public engagement is critical in limiting the negative implications of energy development, and understanding the social influences on and of energy systems is a cornerstone of

Agriculture Law provides an up-to-date discussion of these reforms and the changing landscape in which the CAP now operates. Adopting an interdisciplinary approach, and with international contributors from across Europe and the United States, the Handbook commences with analyses of the legal instruments which implement the reformed CAP, before moving on to consider questions of land use, the role of agriculture within the wider food chain and the international dimension. In these contexts, particular issues identified include: the environmental impact of past, present and future farming

practices; the ability of the food chain to accommodate consumer preferences and scientific innovation; and the hurdles to be cleared before international consensus can be reached on a whole range of agricultural imperatives. As well as providing a state-of-the-art point of reference for academics, this comprehensive book will be of great interest to students, scholars and policymakers dealing with these new challenges faced by agriculture in the EU.

School Development through Teacher Research – Lessons and Learning Studies in Sweden and Tanzania presents results from a three-year-long joint research project conducted by educational researchers from Tanzania and Sweden. Even though the country contexts differ in social economic as well as educational conditions, including teacher education and classroom standards, many

recurrent education challenges are shared. These include the tendency to make educational reforms with little or no input from professionals. The new educational reforms in both countries put a much higher responsibility on teachers; teachers must be able to organise teaching that enables all students to develop required abilities/competencies. Thus, teachers need tools to develop knowledge that can contribute to their professional knowledge base. With an overall interest in issues of teaching and action research, this joint project aimed to use Lesson and Learning Study as models for developing and improving the quality of teaching and

learning in schools. The research project was realised through four case studies in each country with a focus on students' development of specific capabilities and values in Science, Vocational Skills/Home and Consumer Studies, English as second language and Mathematics in grades 6-7. Complementing the cases School Development through Teacher Research – Lesson and Learning Studies in Sweden and Tanzania offers an introductory background to Lesson and Learning Studies as models of teacher-driven research and school development. The book is written to support teachers and teacher educators' wishing to reflect about learning and the

Tourism, one of the world's leading industries, has propelled countries into recovery from economic recession. As a multi-disciplinary, multi-sectoral, holistic, and systemic industry, tourism also uniquely placed to address the concerns of the United Nations' Sustainable Development Goals (SDGs). While the relationships between tourism, sustainability, and sustainable development are the subjects of deep study, the direct positive effects of tourism on SDGs remain underdiscussed. The Handbook of Research on the Role of Tourism in Achieving Sustainable Development Goals is a collection of innovative

research that explores sustainable practices within the tourism industry. While highlighting a broad range of topics including economic growth, education, and production patterns, this book is ideally designed for engineers, entrepreneurs, policymakers, executives, advocates, researchers, academicians, and students.

*Action research is a form of research closely linked to practice which can readily be undertaken by practitioners and service users. This handbook offers a comprehensive guide to action research as a strategy for inquiry and development in health and social care. It can be used by individuals or groups working independently on their own projects or as a basis for a tutor-led course. It features * an introduction to the theories behind action research and other forms of research related to it *lively case studies from social work, nursing, mental health care and community work * a step-by-step study guide.*

The theoretical section of the book provides a general definition of action research, compares action research with other forms of social research, outlines the nature of a 'culture of inquiry' in the workplace, and describes the links between action research and service-user research, management, community development, evaluation, reflective practice, feminist research and anti-racist research. This practical study guide covers issues such as preparing a proposal, ethics and principles of procedure, gathering and analysing data, writing a report, the links between action research and critical reflection. It will be particularly useful for groups wishing to undertake action research on an independent basis

Bioplastic is simply plastic that is created from a plant or other biological source rather than petroleum. It can be created by extracting sugar from plants like corn and sugarcane and

converting it into polylactic acids (PLAs), or it can be made from microorganism-engineered polyhydroxyalkanoates (PHAs). Bioplastics are plastics made from renewable biomass sources such vegetable fats and oils, corn starch, straw, woodchips, sawdust, and recovered food waste, among others. Common plastics, such as fossil-fuel plastics (also known as petro-based polymers), on the other hand, are made from petroleum or natural gas. Biodegradable Products Manufacturing (Bio-Products) are all types of natural and artificial products that can be easily decomposed without causing any damage to the environment. The significant examples of Biodegradable Products are Biodegradable Plastic, Biodegradable Airline Meals, Bio-degradable Toilet Paper, Biodegradable Cups etc. It has become the need of

The worldwide bioplastics market is predicted to increase at a CAGR of 17.1 percent over the next five years. The packaging industry's rising product demand will propel the market even higher. The book covers a wide range of topics connected to bioplastics and biodegradable products, as well as their manufacturing processes. It also includes contact information for machinery suppliers, as well as images of equipment and plant layout.
