NEW - TAMAR ELKELES WINS PRESTIGIOUS AWARD! Tamar Elkeles, vice president of Qualcomm Learning Center and co-author of *The Chief Learning Officer*, has been named 2010 CLO of the Year by Chief Learning Officer magazine "Since she began with the company in 1992, Tamar Elkeles has built the Qualcomm Learning Center from a one-person operation into a sophisticated, integrated and innovative strategic resource for the organization" said Norm Kamikow, president and editor in chief of Chief Learning Officer magazine.

Congratulations Tamar! ----- New business realities and customer demands, coupled with new technologies in a changing competitive landscape are causing corporate learning departments to rethink their value, role, and impact in the organization. In a constantly changing business landscape with limited resources and tight budgets, learning must be viewed as essential to a successful achievement of business goals. The individual driving this function, the Chief Learning Officer (CLO), is in a unique position to add significant value to the organization. The role of the CLO is to drive value, focusing on issues such as business alignment, managing resources, innovation, customer service and ROI. The challenge is to show value to the organization in terms that business leaders and financial analysts can understand and appreciate. Written from the perspective of the CLO, this book discusses nine important value-adding strategies, making up this critical role of the CLO of the future. At least twenty high profile CLOs provide their strategies on each of these issues. This book is essential reading for both the training and HR communities who need to show the value and connect learning to the business. This book shows the value that can be achieved in the organization if it is managed and organized properly and the appropriate leadership is provided. * Real world strategies from successful CLO's * Practical applications for skill development * Shows how to connect the learning enterprise to the business.

Tips, techniques, and trends on how to use dashboard technology to optimize business performance Business performance management is a hot new management discipline that delivers tremendous value when supported by information technology. Through case studies

and industry research, this book shows how leading companies are using performance dashboards to execute strategy, optimize business processes, and improve performance. Wayne W. Eckerson (Hingham, MA) is the Director of Research for The Data Warehousing Institute (TDWI), the leading association of business intelligence and data warehousing professionals worldwide that provide high-quality, in-depth education, training, and research. He is a columnist for SearchCIO.com, DM Review, Application Development Trends, the Business Intelligence Journal, and TDWI Case Studies & Solution.

“One of the most interesting and useful books ever written on networking.”—Adam Grant
Social Chemistry will utterly transform the way you think about “networking.”

Understanding the contours of your social network can dramatically enhance personal relationships, work life, and even your global impact. Are you an Expansionist, a Broker, or a Convener? The answer matters more than you think. . . . Yale professor Marissa King shows how anyone can build more meaningful and productive relationships based on insights from neuroscience, psychology, and network analytics. Conventional wisdom says it's the size of your network that matters, but social science research has proven there is more to it. King explains that the quality and structure of our relationships has the greatest impact on our personal and professional lives. As she illustrates, there are three basic types of networks, so readers can see the role they are already playing: Expansionist, Broker, or Convener. This network decoder enables readers to own their network style and modify it for better alignment with their life plans and values. High-quality connections in your social network strongly predict cognitive functioning, emotional resilience, and satisfaction at work. A well-structured network is likely to boost the quality of your ideas, as well as your pay. Beyond the office, social connections are the lifeblood of our health and happiness. The compiled results from dozens of previous studies found that our social relationships have an effect on our likelihood of dying prematurely—equivalent to obesity or smoking. Rich stories of Expansionists like Vernon Jordan, Brokers like Yo-Yo Ma, and Conveners like Anna Wintour, as well as personal experiences from King's own world of connections, inform this warm, engaging, revelatory investigation into some of the most consequential decisions we can make about the trajectory of our lives.

Our Black Year

Rose is a princess, a Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her.

". . . And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

For many years, there has been a great deal of work done on chronic congestive heart failure while acute heart failure has been considered a difficult to handle and hopeless syndrome. However, in recent years acute heart failure has become a growing area of study and this is the first book to cover extensively the diagnosis and management of this complex condition. The book reflects the considerable amounts of new data reported and many new concepts which have been proposed in the last 3-4 years looking at the epidemiology, diagnostic and treatment of acute heart failure.

Who discovered the Dead Sea Scrolls? When and where were they discovered? How were they saved? Who has them now? Will more be discovered? Have all the scrolls been published? Are some still hidden away? Were there conspiracies to suppress some scrolls? How do the scrolls affect Christianity and Judaism? How similar are the biblical scrolls to our Bible today? These and other questions are answered in *The Dead Sea Scrolls, A Short History*, which offers information from exclusive interviews and unpublished archives.

Corporate Explorers Transform Disruption Into Opportunity With This Proven Framework Innovation used to be seen as a game best left to entrepreneurs, but now a new breed of corporate managers is flipping this logic on its head. These Corporate Explorers have the insight, resilience, and discipline to overcome the obstacles and build new ventures from inside even the largest organizations. Corporate Explorers are part entrepreneurs, using innovation disciplines to jump start cutting-edge ideas, and part change leaders, capable of creating support for investment. They see that corporations already own the ideas, resources, and—critically—the talent to build new ventures. Companies like Amazon, Microsoft, Bosch, LexisNexis, and Analog Devices enable managers to put these assets to use and gain an upper hand over startups that threaten to disrupt them. Corporate Explorer is a guidebook to the practices that enable these managers to go from idea into action. It demonstrates how success is not only possible but may offer entrenched companies better odds than venture-capital backed startups. This actionable and proven framework explains how managers can become successful corporate innovators; it includes tools to: Learn how to apply innovation practices with greater discipline Turn great ideas into a full-time job as an innovation leader Experiment with and scale original business models Transform innovation programs into a thriving source of new business Attract, retain, and motivate entrepreneurial talent Energize employees by creating a realistic way to innovate These lessons come from the trailblazers of corporate innovation—Andrew Binns (Change Logic), Charles O'Reilly (Stanford Graduate School of Business), and Michael Tushman (Harvard Business

School)—who have decades of experience helping entrepreneurial-minded executives activate employees to become Corporate Explorers. Entrepreneurs take notice—it's time for Corporate Explorers to set the pace and chart the course for disruption.

From their haunts in the shadowy corner of a bar, front and center at a convenience store, or reigning over a massive mall installation bursting with light, sound, and action, arcade games have been thrilling and addicting quarter-bearers of all ages ever since Pong first lit up its paddles. Whether you wanted a few minutes' quick-twitch exhilaration or the taste of three-initial immortality that came with topping the high score screen, you could get it from the diverse range of space shooters, dot-eating extravaganzas, quirky beat-'em-ups, and more that have helped define pop culture for more than four decades. In *Attract Mode: The Rise and Fall of Coin-Op Arcade Games*, author Jamie Lendino celebrates both the biggest blockbusters (*Pac-Man*, *Star Wars: The Arcade Game*) and the forgotten gems (*Phoenix*, *Star Castle*) of the Golden Age of coin-op gaming, and pulls back the curtain on the personalities and the groundbreaking technologies that brought them to glitzy, color-drenched life in the U.S., Japan, and all over the world. You'll start your journey exploring the electromechanical attractions and pinball games of the early 20th century. Next, you'll meet the earliest innovators, who used college computers and untested electronics to outline the possibilities of the emerging form, and discover the surprising history behind the towering megahits from Nintendo, Sega, and others that still inform gaming today. Then you'll witness the devastating crash that almost ended it all—and the rebirth no one expected. Whether you prefer the white-knuckle gameplay of *Robotron: 2084*, the barrel-jumping whimsy of *Donkey Kong*, or the stunning graphics and animation of *Dragon's Lair*, *Attract Mode* will transport you back to the heyday of arcade games and let you relive—or experience for the first time—the unique magic that transformed entertainment forever. This book features case studies of ten individuals with acquired neurological disorders. These disorders have implications for speech, language, and communication, but to date they have not been the focus of research in speech-language pathology. Chapters present a brief medical overview of each condition, followed by detailed linguistic analysis. A carefully assembled narrative captures the impact of each neurological disorder on an individual's daily life and social activities. This structured approach, supported by further reading and exercises, gives readers a nuanced understanding of each disorder's clinical presentation and language and communication features, and the complex interrelationship between language, communication, and

cognitive and motor symptoms. The book will be of interest to students of all levels, researchers, and clinicians in speech-language pathology and related disciplines, including neurology, psychiatry, and psychology.

"[...] 53. They are enemies of Christ and of the pope, who bid the Word of God be altogether silent in some Churches, in order that pardons may be preached in others. 54. Injury is done the Word of God when, in the same sermon, an equal or a longer time is spent on pardons than on this Word. 55. It must be the intention of the pope that if pardons, which are a very small thing, are celebrated with one bell, with single processions and ceremonies, then the Gospel, which is the very greatest thing, should be preached with a hundred bells, a hundred processions, a hundred ceremonies. 56. The "treasures of the Church," out of which the pope grants indulgences, are not sufficiently named or known among the people of Christ. 57. That they are not temporal treasures is certainly evident, for many of the vendors do not pour out such treasures so easily, but only gather them. 58. Nor are they the merits of Christ and the Saints, for even without the pope, these always work grace for the inner man, and the cross, death, and hell for the outward man. 59. St. Lawrence said that the treasures of the Church were the Church's poor, but he spoke according to the usage of the word in his own time.[...]"

CompTIA A+ Practice Questions Exam Cram Core 1 (220-1001) and Core 2 (220-1002) complements any A+ study plan with 480 practice test questions in the book plus two bonus exams on the companion website—all supported by complete explanations of every answer. This package's highly realistic questions cover every area of knowledge for both new A+ exams: 220-1001 and 220-1002. From Pearson IT Certification, a leader in IT Certification learning and a CompTIA Authorized Platinum Partner, this valuable resource: Covers the critical information you'll need to know to score higher on your A+ 220-1001 and 220-1002 exams! Features 480 questions presented as three full, realistic practice exams for each A+ certification test: both 220-1001 and 220-1002 Includes a detailed answer explanation for every question Addresses all objectives for the 220-1001 and 220-1002 A+ exams, so you can easily assess your knowledge of every topic Coverage includes: Core 1 220-1001: Mobile devices, networking, hardware, virtualization and cloud computing, and hardware and network troubleshooting Core 2 220-1002: Operating systems, security, software troubleshooting, and operational procedures

Practitioners are increasingly adopting a personalised medicine approach to individually tailored patient care, especially disease diagnosis and treatment with the use of biomarkers. However, development and implementation of such

approaches to chronic disease prevention need further investigation and concerted efforts for proper use in healthcare systems. This book provides high-quality, multidisciplinary knowledge from research in personalised medicine, specifically personalised prevention of chronic disease. It addresses different perspectives of prevention in the field, and is the outcome of a four-year work of the Personalized prevention of Chronic Disease (PRECeDI) Consortium, a multi-disciplinary and multi-professional team of experts. The Consortium jointly agreed to document and address the five aspects or domains of personalised medicine and prevention as individual chapters: Identification of biomarkers for the prevention of chronic disease Evaluation of predictive genomic applications Ethico-legal and policy issues surrounding personalised medicine Roles and responsibilities of stakeholders in informing healthy individuals on their genome: a sociotechnical analysis Identification of organisational models for the provision of predictive genomic applications The book focuses on the Consortium's recommendations that are derived from each of these domains based on up-to-date evidence and research that the authors write, follow, and systematically organise and report. Personalisation of health care is, eventually, a driver of innovation in research and healthcare systems. With this SpringerBrief on Personalised Health Care: Fostering Precision Medicine Advancements for Gaining Population Health Impact, the Consortium provides further evidence of the clinical validity and utility of personalised medicine with special emphasis on the prevention of chronic diseases. The book is a useful resource for policy makers, industry and healthcare professionals, scientists, technology-sector professionals, investors, citizens, and private companies that need proper advice to realise the potential of personalised medicine.

Anastasia spent her life longing for an escape. Now, she will spend every waking moment searching for a way back. After a brutal childhood left her with both physical and emotional scars, Anastasia has fought for years to put an end to the nightmares. It's with him, the boy next door who is now the man she cannot live without, that she can finally hope for a happy ending. But in Anastasia's world, hope is a very, very dangerous thing. When she is kidnapped and dragged into a perilous world, Anastasia discovers that her nightmares are not figments of a broken mind, but rather premonitions of her harsh new reality. In a world plagued with dark magic and monsters determined to tear her apart, can she fight her way to freedom even though the only person who ever believed in her is a world away? Grab your copy today and find out what happens when you stop letting others define you. Please note: This series contains darker elements, including explicit language, mentions of abuse, and torture. It is not intended for anyone under the age of 18. This is the first book in a completed five-book series. It is perfect for anyone who loves friends-to-lovers, portal fantasy, a strong female heroine, and an alpha hero who stands beside her. Fantasy romance for adults!

This book offers a detailed investigation of breakdowns in traffic and transportation networks. It shows empirically that transitions from free flow

to so-called synchronized flow, initiated by local disturbances at network bottlenecks, display a nucleation-type behavior: while small disturbances in free flow decay, larger ones grow further and lead to breakdowns at the bottlenecks. Further, it discusses in detail the significance of this nucleation effect for traffic and transportation theories, and the consequences this has for future automatic driving, traffic control, dynamic traffic assignment, and optimization in traffic and transportation networks. Starting from a large volume of field traffic data collected from various sources obtained solely through measurements in real world traffic, the author develops his insights, with an emphasis less on reviewing existing methodologies, models and theories, and more on providing a detailed analysis of empirical traffic data and drawing consequences regarding the minimum requirements for any traffic and transportation theories to be valid. The book - proves the empirical nucleation nature of traffic breakdown in networks - discusses the origin of the failure of classical traffic and transportation theories - shows that the three-phase theory is incommensurable with the classical traffic theories, and - explains why current state-of-the art dynamic traffic assignments tend to provoke heavy traffic congestion, making it a valuable reference resource for a wide audience of scientists and postgraduate students interested in the fundamental understanding of empirical traffic phenomena and related data-driven phenomenology, as well as for practitioners working in the fields of traffic and transportation engineering.

Do you use a satnav or smartphone satnav app? If so, How to Get More from Your Satnav is for you. This unique exploration of the satnav, by an experienced professional driver, provides a penetrating analysis of the difficulties and problems associated with using it. In addition, a wealth of practical advice is offered and many fascinating insights. The 'bells and whistles' associated with satnavs are avoided and instead author Bob Scanlon concentrates on straightforward road navigation. • The problem of arriving at the wrong destination is given an in-depth consideration and a simple practical solution offered. • Route planning is explored and a range of techniques are proposed to help. • Pointers are provided to advanced routing. • How you use your satnav on the move is a much neglected area of concern and guidance and advice is provided here too. • A review of a high specification satnav with HD live traffic is included and lastly, the satnav as a concept is evaluated. This is a sorely needed contribution to the practice of road navigation and provides an invaluable guide to getting more from your satnav.

The Best Tool of the Millennium The seeds of Rybczynski's elegant and illuminating new book were sown by The New York Times, whose editors asked him to write an essay identifying "the best tool of the millennium." The award-winning author of *Home*, *A Clearing in the Distance*, and *Now I Sit Me Down*, Rybczynski once built a house using only hand tools. His intimate knowledge of the toolbox -- both its contents and its history -- serves him beautifully on his quest. *One Good Turn* is a story starring Archimedes, who invented the water screw and introduced the helix, and Leonardo, who sketched a machine for carving wood screws. It is a story of mechanical discovery and genius that takes readers from ancient Greece to car design in the age of American industry. Rybczynski writes an ode to the screw, without which there would be no telescope, no microscope -- in short, no enlightenment science. One of our finest cultural and architectural historians, Rybczynski renders a graceful, original, and engaging portrait of the tool that changed the course of civilization.

The author presents his insights and perspective, along with cited publications, on how ingredient selection and food preparation can address a variety of chronic diseases and health issues.
