First published in 1991, this book — through the examination of ancient Greek literary, philosophical and legal texts — analyses how the Athenian torture of slaves emerged from and reinforced the concept of truth as something hidden in the human body. It discusses the tradition of understanding truth as something that is generally concealed and the ideas of 'secret space' in both the female body and the Greek temple. This philosophy and practice is related to Greek views of the 'Other' (women and outsiders) and considers the role of torture in distinguishing slave and free in ancient Athens. A wide range of perspectives — from Plato to Sartre — are employed to examine the subject.

Set seventy years before The Varios, the second book in the trilogy follows the adventures of young Celandine at the onset of the First World War. Having run away from her detested boarding school, Celandine is too afraid to go home in case she is sent back. As she seeks shelter in the Wild Wood near her home, little does she think she will encounter a world where loyalty and independence is fiercely guarded, and where danger lurks in the most unlikely of places. Celandine's troubled character finds both refuge and purpose among the secret tribes of little people that she alone believes in. The novels of the Various trilogy are full of mystery, beauty and adventure; this second novel is both page-turning and life-affirming.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom\_bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Public education is often viewed as dominated by an emphasis on test scores and narrowly defined parameters of performance and achievement. By contrast, John P. Miller's Whole Child Education fosters relationships between various forms of thinking, links body and mind, and recognizes the inner life of the child. Addressing issues of teaching, curriculum, the school, and teacher wellness, Miller presents three basic approaches (transmission, transaction, and transformation) that facilitate a connection with the whole student. Practical examples from teacher (founded in 2009) illustrate how the 'Whole Curriculum' can be implemented on both the small and large scale. Inspired by the powerful vision of Martin Luther King and his concept of the Beloved Community, Whole Child Education is a vehicle for building community through holistic education.

Checklists help us work better. They help us manage complex tasks more effectively and ensure we apply what we know correctly and consistently. They've become indispensable for airline pilots and doctors, but can this low-tech approach to planning and problem solving demand a place in the teacher's toolkit? Teaching is complicated, with challenging decisions and important consequences, but it's in the most complex situations that a straightforward checklist can be the most useful. Goodwin and Hubbell present 12 daily touchstones--simple and specific things any teacher can do every day--to keep classroom practice focused on the hallmarks of effective instruction and in line with three essential imperatives for teaching: \* Be demanding: Align teaching with high expectations for learning. \* Be supportive: Provide a nurturing learning environment. \* Be intentional: Know why you're doing what you're doing. If there were one thing you could do each day to help one student succeed, you'd do it, wouldn't you? What about three things to help three students? What if there were 12 things you could do every day to help all of your students succeed? There are, and you'll find them here.
