A massive disconnect exists today between consumers and providers. As consumers, we have a greater selection of higher quality goods and services to choose from, yet our experience of obtaining and using these items is more frustrating than ever. At the same time, companies find themselves with declining customer loyalty, greater challenges in fulfilling orders, and a general sense of dissatisfaction in connecting with their customers. In LEAN SOLUTIONS, lean production experts Womack and Jones show consumers and companies alike how they can align their goals to achieve greater value with less waste.

This study investigates the relation of total quality management (TQM) and just-in-time purchasing (JITP) with respect to firms' performance, based on theories from operations management, organization theory, strategic management and marketing. U.S. companies have implemented TQM and JITP techniques to improve their global competitive position. The lack of empirical research on how these techniques effect firms performance makes it necessary to explain their strategic values as management innovations. In this study, a cross-sectional mail survey was used with the target population of firms in the continental United States that have implemented either technique, or both. The results indicate that the extent of TQM and JITP implementation positively correlates with a firm's performance. Furthermore, the relation between JITP and financial and market performance is more significant in those industries that face high as opposed to low foreign competition. In this study, the validity of findings was assessed in four parts: statistical conclusion, internal, construct, and external validity. Each validity type is defined and its threats are discussed. Based on the findings, a revised research model is offered. The author also notes likely avenues of future research for theorists and practitioners.

Principles of Mass and Flow Production is a 55th Anniversary Special Reprint Edition of Frank G. Woollard's long-forgotten book published in 1954, and includes Woollard's amazing 1925 paper "Some Notes on British Methods of Continuous Production." Both are presented as unabridged digitized images of the original works, and include commentary and analysis by noted Lean management practitioner, author, and educator, Bob Emiliani, Ph.D. Frank G. Woollard made major contributions to progressive manufacturing management practices in the British automobile industry of the 1920s, and was also the first to develop and implement mechanical materials handling equipment known as automatic transfer machines while working at Morris Motors Ltd., Engines Branch, in Coventry, U.K. His work is comparable to that of the legendary Taiichi Ohno, the principal architect of Toyota Motor Corporation's production system, and suggests that the timeline for discoveries and attributions of key accomplishments must be revised. Woollard deserves widespread recognition for his own groundbreaking achievements, which lie between the time of Henry Ford and Kiichiro Toyoda, the founder of Toyota Motor Corporation. His work is highly relevant to current-day Lean management, in that he understood the idea and practice of continuous improvement in a flow environment. Woollard also recognized that flow production will not work properly if used by management in a zero-sum manner, which is an insightful and distinctive feature of Woollard's flow production system, and shows he understood the importance of what is today called the "Respect for People" principle in Lean management. Woollard's remarkable work in flow production and his prescient innovations in industrial automation ensure him a prominent place in the history of production engineering, automation, and industrial management. Readers interested in Lean management, the evolution of flow production, and the history of industrial management and automation will find this book to be entertaining, informative, and a valuable resource for future reference.
