Business Ethics provides a thorough review and analysis of business ethics issues using several learning tools: Strategic Stakeholder Management as the Theme: All chapters use a strategic stakeholder approach as a unifying theme. The text is thus the first text that adopts this approach. Most business ethics scholars and practitioners agree that successful ethical companies are the ones that can strategically balance the needs of their various stakeholders. By adopting this approach, students will be able to see how the various aspects of business ethics are connected. Theory-based and Application-based: All chapters have important applicable theories integrated with discussion of how such theories apply in practice. Unlike other texts that are either too theoretical or too practical, this text provides the appropriate blend of theory and practice to provide deeper insights into the concepts covered in the chapter. Global Perspective: Unless most other texts, this text provides a global perspective on business ethics. Most chapters include material pertaining to ethics in global contexts. Included are cases about companies in a wide range of countries including Japan, U.K., China and India among many others. Cases: The text contains over 30 real world global cases. Each chapter ends with a short two page case as well as a longer case that varies in length. Each has discussions questions at the end. Finally each of the four parts ends with a Comprehensive Case; proven teaching cases from The Ivey School and other sources.

*In this report the Transport Committee calls on the Government to implement the vision for transport - including improved traffic flows on motorways, rail electrification and high speed rail, reducing greenhouse gas emissions from transport - that has been established under the current Secretary of State, Lord Adonis. The Department has made progress in a number of important areas, both recently and over the past decade, and has also established a new sense of direction, despite a too-frequent change of ministers. The Committee reviews progress against the Government's integrated transport plan, 'Transport 2010', which was adopted in 2000. Whilst much has been achieved, the ambition to build up to 25 light rail lines has not. It calls on the Government to publish a comprehensive progress report against the targets that it set itself. It also calls for strong action on local bus services which, outside London, are still not integrated with other local transport services. Bus use outside London continues to decline, apart from a slight increase after the introduction of free bus travel for older and disabled people. The Committee calls for full implementation of the Local Transport*

*Act which gives local authorities powers to introduce bus quality partnerships and quality contracts; and for the Traffic Commissioners to be given adequate resources to carry out punctuality monitoring.*

*Lightweighting is a concept well known to structural designers and engineers in all applications areas, from laptops to bicycles to automobiles to buildings and airplanes. Reducing the weight of structures can provide many advantages, including increased energy efficiency, better design, improved usability, and better coupling with new, multifunctional features. While lightweighting is a challenge in commercial structures, the special demands of military vehicles for survivability, maneuverability and transportability significantly stress the already complex process. Application of Lightweighting Technology to Military Vehicles, Vessels, and Aircraft assesses the current state of lightweighting implementation in land, sea, and air vehicles and recommends ways to improve the use of lightweight materials and solutions. This book considers both lightweight materials and lightweight design; the availability of lightweight materials from domestic manufacturers; and the performance of lightweight materials and their manufacturing technologies. It also considers the "trade space"--that is, the effect that use of lightweight materials or technologies can have on the performance and function of all vehicle systems and components. This book also discusses manufacturing capabilities and affordable manufacturing technology to facilitate lightweighting. Application of Lightweighting Technology to Military Vehicles, Vessels, and Aircraft will be of interest to the military, manufacturers and designers of military equipment, and decision makers.*

Current energy consumption mainly depends on fossil fuels that are limited and can cause environmental issues such as greenhouse gas emissions and global warming. These factors have stimulated the search for alternate, clean, and renewable energy sources. Solar cells are some of the most promising clean and readily available energy sources. Plus, the successful utilization of solar energy can help reduce the dependence on
