

Trade Facilitation And Performance Of Manufacturing

It is becoming more evident that better market access conditions alone, do not translate directly into increased trade opportunities for developing countries. With the burgeoning trend of lowering tariff barriers, it is "non-tariff measures" and "behind the border" barriers that are gaining ground in the trade policy debate. Trade facilitation reforms aim to lower transaction costs for businesses and help expedite the clearance and release of goods across borders. As part of the current round of multilateral trade negotiations, Members of the World Trade Organization are negotiating new commitments in the area of trade facilitation. Through its three different essays, this research tries to first examine this new multilateral agreement from a political economy perspective and address how it is neither a classic WTO Agreement nor a classic case of winners and losers in the WTO jargon. Second, with some thirty trade facilitation measures on the table, the objective of this research is to quantify the potential gains in trade performance from the implementation of this agreement. This research uses a new and original database of forty diverse developing countries which assesses their compliance level with a set of trade facilitation proposed measures. Using a combination of quantitative and qualitative methods, this research assesses the impact of five trade facilitation indicators on their trade flows. Finally, despite the positive relationship between the economic benefits of trade liberalization and trade facilitation, implementation of a WTO Accord on Trade Facilitation in developing countries will face many challenges related to the domestic politics of trade and institutional factors that policymakers need to consider for any successful implementation to take place.

Real borders can be thick. They are not dimensionless lines as typically assumed in theoretical models and standard empirical analyses, but a zone populated by agencies that develop and administer regulations firms have to comply with when engaging in international trade, many of which have their own procedures. Borders can then easily become a labyrinth hard to get through. This is crucial because border agencies' procedures influence the time needed to ship goods from their origins to their destinations and can thereby affect trade, particularly in a context characterized by increasingly segmented production chains and rising lean retailing. Latin American and Caribbean countries have recently implemented various trade facilitation initiatives that aim to streamline the administrative processing of trade flows and accordingly reduce trading times. These initiatives include risk management, single windows, authorized economic operators, simplified postal exports, and expedited transit arrangements, all of which are cornerstones of the 2013 WTO Agreement on Trade Facilitation and have been subject of multiple international organizations' operations. Despite of being ubiquitous, evidence on the impact of these specific initiatives has been extremely limited. Lack of precise data has been a major obstacle. *Out of the Border Labyrinth* fills this gap and sheds entirely new light on the trade effects of such trade facilitation measures and the channels thereof. It presents the results of thorough impact evaluations, which have been carried out by applying rigorous methods on unprecedented transaction-level data for several countries in the region. These results reveal that trade actually expanded as a consequence of such facilitation measures and that the primary channel has been shipping frequency. Based on these econometric examinations and careful institutional case studies, *Out of the Border Labyrinth* systematizes a new line of trade policy research and informs policymaking and assistance activities by international organizations by providing tools that will help design and assess policies in an area that will be very active in upcoming years as countries work towards implementing the multilateral agreement reached in Bali.

Does foreign aid spent on trade facilitation increase trade flows of developing countries? There is an on-going and high profile discussion of aid-for-trade associated with the Doha negotiations of the World Trade Organization. There continue also questions about how best to achieve the Millennium Development Goals. The analysis in this paper explicitly considers how to target aid most effectively to increase trade a fundamental question related to the crisis and policy debate over restarting the world trading system. Using detailed data on aid flows from the OECD, the analysis here estimates the responsiveness of trade flows to specific types of foreign aid. The findings indicate that aid directed toward promoting trade enhances the trade performance of recipient countries: a 1 percent increase in aid directed toward trade policy and regulatory reform (amounting to about US\$11.7 million more such aid) could generate an increase in global trade of about US\$818 million. This yields a "rate of return" on every dollar of this type of aid of about US\$697 in additional trade. As the dollar aid flow is relatively small, such targeted aid mitigates concerns about absorptive capacity and real exchange rate appreciation, which may accompany larger disbursements.

Trade facilitation measures that simplify, modernize, and harmonize export and import processes are particularly important in a world of global value chains where goods cross borders multiple times. At the firm level, trade facilitation commitments in preferential trade agreements can generate larger gains for firms participating in global value chains, as these firms can benefit both from efficiency enhancement at their own border (when importing inputs) and at the partner countries' borders (when exporting). This paper uses Peruvian customs data to investigate the heterogeneous impact of trade facilitation provisions across firms, depending on their global value chain linkages. The results show that trade facilitation provisions in preferential trade agreements promote the export performance of global value chain firms, especially when they import inputs from the preferential trade agreement partner country. In the case of Peru, the main benefit of trade facilitation provisions results from efficiency enhancements at its own border, allowing global value chain firms to import inputs in a more timely and predictable manner.

A WTO Agreement on Trade Facilitation

Belarus

This National Trade Facilitation Roadmap for Exports Enhancement and Diversification provides the framework for a national trade facilitation reform programme over a five-year period (2019-2024) and includes a strategic vision supported by goals and activities, and performance indicators to measure progress against set targets. It is the result of a consultative effort of the National Coordination Committee on Trade Facilitation (CCTF), under the UNECE guidance, and in collaboration with key international partners including the ITC and UNCTAD. This document has been developed in the context of the project on "Removing regulatory and procedural barriers to trade in the Republic of Tajikistan" at the request of the Government.

Trade facilitation increases trade flows, lowers trade cost, and ultimately contributes to sustainable and inclusive growth. This publication, jointly prepared by the Asian Development Bank and the United Nations Economic and Social Commission for Asia and the Pacific, reviews the state of play of trade facilitation and paperless trade in Asia and the Pacific. It investigates the evolution of trade costs in the region, examines trade facilitation and paperless trade implementation, and highlights the key initiatives and efforts in Central Asia, the Greater Mekong Subregion, South Asia, and the Pacific. It includes impact assessments of trade facilitation implementation and corridor performance on reducing trade costs and increasing trade. Belarus is a member of Eurasian Economic Union (EEU), bordering three European Union (EU) countries (Poland, Lithuania and Latvia), Ukraine and Russia. As such, the country is strategically located for international transit trade. With the aim of boosting the country's transit role, the government of Belarus is undertaking several infrastructure development projects and regulatory reforms aimed at trade facilitation. Government undertook a Two agencies at the border reform with the goal of reducing the number of agencies at the border to only two, namely Customs and the Border Police. Belarus's efforts were supported by the World Bank Group (WBG), including the World Bank's Transit Corridor Improvement Project (TCIP), which is financing the modernization of the transit Corridor-M6 Minsk-Grodno, and the Belarus Business Regulation and National Quality Infrastructure Advisory Project of the International Finance Corporation (IFC) with the aim of improving trade procedures. Border-crossing time release studies are powerful tools for analyzing trade logistics and measuring the performance of border agencies. Insights from a border-crossing study can help in designing and accelerating trade facilitation reforms. Preparing and carrying out an effective study is a challenging exercise in itself, as it involves sensitive data, and complex multi-agency and cross-country relationships. The border-crossing time release study for commercial cargo undertaken by the World Bank Group's (WBG's) Trade and Competitiveness Global Practice team in Belarus in 2015 is an example that provides important lessons that may be useful for other countries. In this context, the border crossing time release study (BCTR study) was designed by the two WBG project teams, and implemented in close cooperation with the State Customs Committee of Belarus.

This book guides the implementation of trade facilitation measures and reforms in Asia and the Pacific. It attempts to bridge the gaps among policy makers, practitioners, and economists by outlining operational guidance on how to assess the status of trade facilitation, what measures and reforms are necessary, and how to implement them at the national and regional levels. The reference book also provides international, regional, and national perspectives on trade facilitation.

The Economics of Trade Facilitation

This paper studies the effectiveness of the implementation of trade facilitation measures in ASEAN member countries in comparison with these measures in other regional organizations. We evaluate trade facilitation performance and indicate trade facilitation priorities and needs that are different between ASEAN members. More specifically, we examine logistics-related costs in ASEAN and figure out how the current level of logistics-related costs could be a burden or an advantage for ASEAN countries. Then, we identify some critical barriers which have impacts on logistics services which are related to foreign investment, customs and mode-specific across ASEAN. Although most of the barriers are based on logistics unfriendly practice, "specific policy measures would help member countries to reduce the impact of these barriers to logistics services." (Gupta et al, 2011) The ultimate goal of this research is to propose implications and recommendations for harmonization of logistics policies in ASEAN countries toward AEC. Studies on trade facilitation have been conducted for the Asia-Pacific in general. However, no such specific research has been conducted for ASEAN. Per se, this research aims to find out the factors that promote trade facilitation and assess several costs for logistics services in ASEAN. The research also examines the main inhibitors to trade liberalization in ASEAN, and hence, carries practical implications for ASEAN. The critical barriers to trade liberalization as examined in this paper are valuable for ASEAN for implementing and fine-tuning appropriate policies toward the AEC.

The Middle East and North Africa (MENA) region's trade performance over the past two decades has been disappointing. Efforts to boost trade through a plethora of regional trade agreements (RTAs) are underway. This study examines the potential contribution of regional trade agreements, as well as trade facilitation improvements, in enhancing the development prospects of the region. Using the Global Trade Analysis Project (GTAP) model and database, both intra-regional integration and integration with the European Union are observed to have a favorable impact on welfare in the MENA region. The welfare gains from integrating with the European Union are observed to be at least twice as much as intra-regional integration. Furthermore, these welfare gains are observed to at least triple when the implementation of the RTAs is complemented with trade facilitation improvements.

With efforts for further substantive liberalization of trade showing little signs of success, focus has shifted to the rationalization and simplification of procedural regulations in international trade. The Agreement on the Trade Facilitation in Goods came into force in 2017, and proposals for similar agreements for trade in services and foreign investment have been submitted and are under discussion. This book discusses both existing and proposed provisions on trade facilitation within the World Trade Organisation (WTO). It covers relevant General Agreement on Tariffs and Trade (GATT) provisions and jurisprudence, the negotiating history of the Trade Facilitation Agreement in Goods, provisions of the WTO Trade Facilitation Agreement and their relevance for developing countries' concerns, with special emphasis on India, and the prospects for a global digital trade facilitation platform. The book also discusses the desirability for trade facilitation agreements for services and investment and the possibility of success of the proposals submitted in this regard in the WTO.

The 'Trade and Transport Facilitation Assessment' (TTFA) is a tool for identifying inefficiencies in international supply chains that limit a country's ability to compete in international trade. The TTFA examines problems that affect not only exports competitiveness, but also the ability to import and distribute inputs to production and consumer goods. This new TTFA toolkit was developed to meet the growing demand for facilitation and logistics reforms in an environment of increasing global competition and expanded trade in intermediate goods. It reflects practical experience and the change in the nature of demand from developing countries. The TTFA focuses on simplification and harmonization of trade-related procedures and identifies the opportunities for improving logistics services, infrastructure, and the overall performance of specific supply chains. It also outlines practices to develop plans of action with proper interactions with government agencies and stakeholders.

Regional Integration in South Asia: What Role for Trade Facilitation?

Agricultural Specific Trade Facilitation Indicators

Trade and investment are engines of growth for the Asia and the Pacific and enabled them to significantly reduce poverty during the past two decades. However, the performance of the region would

have been better if the high tariff and non-tariff barriers issues could have been addressed, with the non-tariff trade cost alone accounts for at least 90% of overall trade costs. With some of the world's most dynamic economies located in the region, there is large potential for an expansion of intraregional trade and investment in Asia and the Pacific, making the whole region more resilient to external shocks. Unfortunately, many barriers prevent intraregional movement of goods and investment, affecting in particular the opportunities for small and medium-sized enterprises (SMEs) to directly participate in international trade. Removal of those barriers and deepening regional connectivity can therefore be a strong driver of growth and poverty reduction. While sufficient literature exists with regard to establishing a direct and positive correlation between trade and poverty reduction, very little study has been done on the linkages between trade facilitation and poverty reduction. This book addresses this gap and features a compilation of specific case studies that explore the linkages between a number of trade facilitation measures and poverty reduction.

This report presents the findings of the OECD indicators for assessing the impact of specific trade facilitation measures on developing countries' trade. Sixteen trade facilitation indicators (TFIs) have been constructed, corresponding to the main policy areas under negotiation at the WTO, with the aim to estimate the impact of addressing specific hurdles in the trade and border procedures of a given country. The policy areas that seem to have the greatest impact on trade volumes and trade costs not only for imports but also to export performance are the availability of trade-related information, the simplification and harmonization of documents, the streamlining of procedures and the use of automated processes. The combined effect of improvements in these areas is greater than the simple sum of the impact of individual measures, reaching almost 14.5% reduction of total trade costs for low income countries, 15.5% for lower middle income countries and 13.2% for upper middle income countries. The Asian Development Bank, under the South Asia Subregional Economic Cooperation program, is helping Maldives implement a robust domestic and regional trade system. This integrated trade network facilitates seamless movement of goods and documents, across organizational and national boundaries, and will vastly improve the business environment and overall economic activity. This publication outlines key blockchain use cases recommended for implementation in Maldives for trade facilitation. A feasibility study conducted from April to July 2019 established the use cases of blockchain technology to facilitate cross-border trade and improve operational performance of domestic trade processes in Maldives.

The authors estimate the impact of aggregate indicators of "soft" and "hard" infrastructure on the export performance of developing countries. They build four new indicators for 101 countries over the period 2004-07. Estimates show that trade facilitation reforms do improve the export performance of developing countries. This is particularly true with investment in physical infrastructure and regulatory reform to improve the business environment. Moreover, the findings provide evidence that the marginal effect of infrastructure improvement on exports appears to be decreasing in per capita income. In contrast, the impact of information and communications technology on exports appears increasingly important for richer countries. Drawing on estimates, the authors compute illustrative exports growth for developing countries and ad-valorem equivalents of improving each indicator halfway to the level of the top performer in the region. As an example, improving the quality of physical infrastructure so that Egypt's indicator increases half-way to the level of Tunisia would increase exports by 10.8 percent. This is equivalent to a 7.4 percent cut in tariffs faced by Egyptian exporters across importing markets.

Quantitative Methods for Assessing the Effects of Non-tariff Measures and Trade Facilitation

Trade Facilitation in the Caribbean

Aid for Trade Facilitation

An Overview

A Practical Toolkit for Country Implementation

This study examines the relevance of trade facilitation reforms in maximizing the economic impact of infrastructure connectivity investments through the Belt and Road Initiative (BRI). It provides an overview of trade facilitation performance in BRI economies, with a focus on those countries involved in six key land corridors. This overview is based on three categories of data: international indicators for trade facilitation performance, notably Doing Business, the Logistics Performance Index, the Enabling Trade Index, and the OECD Trade Facilitation Indicators; publicly-available literature and analysis on the BRI corridors; and analysis conducted through World Bank projects involving BRI economies. A key finding is that, in a global context, trade facilitation along the BRI corridors is weak, with performance for most corridors below global averages according to most indicators. There is also wide variation in performance between countries along each corridor, providing a significant barrier to the efficient utilization of the corridors for predictable, timely cross-border transportation of goods. Based on the review of corridor performance, the study recommends priority trade facilitation reforms for the BRI economies, as well as recommendations on the implementation of these reforms, based on international experience.

What key business process output measure(s) does Trade facilitation leverage and how? Who is responsible for ensuring appropriate resources (time, people and money) are allocated to Trade facilitation? How do we go about Securing Trade facilitation? How can the value of Trade facilitation be defined? Does the Trade facilitation performance meet the customer's requirements? This amazing Trade facilitation self-assessment will make you the entrusted Trade facilitation domain veteran by revealing just what you need to know to be fluent and ready for any Trade facilitation challenge. How do I reduce the effort in the Trade facilitation work to be done to get problems solved? How can I ensure that plans of action include every Trade facilitation task and that every Trade facilitation outcome is in place? How will I save time investigating strategic and tactical options and ensuring Trade facilitation costs are low? How can I deliver tailored Trade facilitation advice instantly with structured going-forward plans? There's no better guide through these mind-expanding questions than acclaimed best-selling author Gerard Blokdyk. Blokdyk ensures all Trade facilitation essentials are covered, from every angle: the Trade facilitation self-assessment shows succinctly and clearly that what needs to be clarified to organize the required activities and processes so that Trade facilitation outcomes are achieved. Contains extensive criteria grounded in past and current successful projects and activities by experienced Trade facilitation practitioners. Their mastery, combined with the easy elegance of the self-assessment, provides its superior value to you in knowing how to ensure the outcome of any efforts in Trade facilitation are maximized with professional results. Your purchase includes access details to the Trade facilitation self-assessment dashboard download which gives you your dynamically prioritized

projects-ready tool and shows you exactly what to do next. Your exclusive instant access details can be found in your book.

The 2013 World Trade Organization ministerial in Bali produced a comprehensive framework agreement on trade facilitation. If fully implemented, the agreement should increase the speed and reduce the cost of moving goods across international borders. But which reforms are most likely to improve these outcomes, how much improvement should be expected, and what might such improvements be worth? This paper adopts the Organisation for Economic Co-operation and Development's trade facilitation indicators as quantitative descriptions of trade facilitation policy. It estimates the impact of the indicators and other variables on the time necessary to clear customs, the associated cost, and a customs performance index. Of the 12 policy bundles, the good governance and impartiality indicator is most clearly related to customs clearance time. A move to best practice in all policies by all World Trade Organization members would reduce the predicted time spent in customs by an average of 1.6 days for imports and 2 days for exports. Using a conservative estimate of the value of time in trade, such comprehensive reforms imply a mean tariff equivalent reduction of 0.9 percentage points on imports and 1.2 percentage points on exports. The same estimates are used to calculate welfare gains of policy reform by World Trade Organization members. Reform in China alone accounts for roughly one-fourth of the global benefits from the Trade Facilitation Agreement.

As the fourth industrial era evolves, the role of blockchain technology, Artificial Intelligence (AI), and machine learning in transforming national commerce cannot be overemphasized, especially with the expansion of e-commerce in Africa. In other words, technological advancement and innovation are becoming essential to many aspects of Nigerian businesses, thereby considerably enhancing trade and productivity. This book provides a primer on the role that digital technology may play in Nigeria's trade flows, and the implications for enabling an economy-wide deployment of digitization in trade facilitation. This book analyzes the importance of STI's contributions to the Nigerian economy, focusing on the transition to digital solutions and their potential to significantly increase trade and commerce. Since AfCFTA's 2018 launch, academic and political responses to the automation of business have increased. Further, business promotion, aid-for-trade, regional integration and trade facilitation issues are at the forefront of business development policy and intellectual discourse in Nigeria. This book details Nigeria's business opportunities, capacities and challenges with a special interest in sustainably enhancing the nation's business ecosystem in the digital age. Through the examination of trade facilitation policies, programs, tools, models and technologies, this book demonstrates Nigeria's need for strategic public-private partnership in digital trade to foster a more sustainable business future.

Trade Facilitation and the Global Economy

This paper analyzes the impacts of selected trade facilitation measures on international trade flows. A gravity model is used to estimate four equations: a pooled cross-section model; a fixed-effects model; a random effects model; and a Poisson maximum likelihood estimator. The contribution of the paper is twofold. First, the analysis uses a recent data set, a panel that includes trade data from 2011 and 2012 for 72 countries. Second, to measure the impacts of trade facilitation measures, the analysis includes dummy variables for the presence of an authorized economic operator program, the existence of a single-window program in the countries in the sample, and the existence of a mutual recognition arrangement between pairs of countries in the sample. The results show that the presence of an authorized economic operator program and the existence of a single-window program will improve countries' trade performance. By contrast, the existence of a mutual recognition arrangement will not necessarily improve countries' trade performance. These results suggest that, in general, trade facilitation measures as a whole will help countries improve their trade performance.

The trade performance of countries in South Asia over the past two decades has been poor relative to other regions. Exports from South Asia have doubled over the past 20 years to approximately USD 100 billion. In contrast, East Asia's exports grew ten times over the same period. The low level of intraregional trade has contributed to weak export performance in South Asia. The empirical analysis in this paper demonstrates gains to trade in the region from reform and capacity building in trade facilitation at the regional level. When considering intraregional trade, if countries in South Asia raise capacity halfway to East Asia's average, trade is estimated to rise by USD 2.6 billion. This is approximately 60 percent of the total intraregional trade in South Asia. Countries in the region also have a stake in the success of efforts to promote capacity building outside its borders. If South Asia and the rest of the world were to raise their levels of trade facilitation halfway to the East Asian average, the gains to the region would be estimated at USD 36 billion. Out of those gains, about 87 percent of the total would be generated from South Asia's own efforts (leaving the rest of the world unchanged). In summary, we find that the South Asian region's expansion of trade can be substantially advanced with programs of concrete action to address barriers to trade facilitation to advance regional goals.

This book focuses on strategies to achieve economic diversification in Asian landlocked countries. It does so by analysing the impact of the Dutch disease, non-resource firm heterogeneity, trade logistics operations, trade facilitation, aid for trade, small and medium-sized enterprises, and foreign direct investment. Offering a wide range of expert views and opinions, research findings, information and data, the book will be of value to policy makers and students of trade and development economics. This dissertation explores the narrow dimensions of trade facilitation and their impact on trade. In the first part, I describe the various ways to measure trade facilitation. I explore the traditional indicators of trade facilitation as well as some specific surveys. I indicate several limitations of these commonly used indicators. I also review the role of international arrangements linked to trade facilitation which are rarely taken into account in related studies. Then, I build a composite indicator of trade facilitation which covers various narrow dimensions. It follows the WTO negotiations framework and draws on ninety nine variables. I show that several disparities remain across OECD countries and that information availability, advance rulings and formalities have an important impact

on trade. In the second part, I review various trade facilitation dimensions across the World and particularly the European Union. It reveals several disparities and indicates the need to expand the TFIs to a wider set of countries. The European case study suggests that potential gains remain even in developed countries who share -similar- regulations. It underlines not only some implementation issues but also a path to follow to improve trade facilitation policies. Finally, I provide several insights on the methodology of EU trade facilitation performance.

This report discusses the benefits of trade facilitation - meant to promote transparent, predictable and straightforward border procedures so as to expedite the movement of goods. The OECD Trade Facilitation indicators provide a powerful tool for assessing the impact of related reforms and monitoring

Border processes for perishable agro-food products involve multiple agencies and raise complex compliance and enforcement issues. At the same time, the speed of border processes is of particular importance for exporters as delays at the border can have great negative impacts on the quality of perishable agro-food products and hence their value. This calls for a more detailed and nuanced look at the impact of trade facilitation reforms on agro-food trade.

This report examines how a sub-set of OECD Trade Facilitation Indicators (TFIs) could be used to provide a more complete picture of the current performance of border processes for perishable agro-food goods. It highlights specific TFIs of relevance to agro-food, including: documentation requirements or border controls related to sanitary and phytosanitary measures and technical barriers to trade, and automation and streamlining of border formalities, and explores differentiated impacts across agro-food product groups. Practical approaches are identified to enrich the scope of the existing OECD TFIs with a view to deepening the information base on the performance of trade facilitation policies for perishable agro-food goods.

Trade Facilitation in ASEAN Members - A Focus on Logistics Policies Toward ASEAN Economic Community

Trade facilitation matters. Estimates of trade friction costs from border and custom procedures are relatively high. Trade facilitation to allow for the speedy movement of traded goods may be more important for agricultural, especially perishable, products than for other goods because of their time sensitivity, especially for developing countries. Data suggest that many countries across the geographic and income spectrum have improved their performance on several trade facilitation variables. Concurrently, agricultural trade has grown substantially, especially from low and lower middle income countries. The data suggest that further improvements to trade facilitation in many low and lower middle income countries are needed for them to catch up with best practices. Impediments to trade remain, as indicated by the relatively high tariff equivalent of trade costs, especially on agricultural products.

In a globalised world, where goods cross borders many times as intermediate and as final products, trade facilitation is essential to lowering overall trade costs and increasing economic welfare, in particular for developing and emerging economies. Facilitation efforts undertaken by various countries around the world also show that the benefits of such measures clearly compensate the costs and challenges posed by their implementation.

This paper analyzes the impacts of selected trade facilitation measures on international trade flows. A gravity model is used to estimate four equations: a pooled cross-section model; a fixed-effects model; a random effects model; and a Poisson maximum likelihood estimator. The contribution of the paper is twofold. First, the analysis uses a recent data set, a panel that includes trade data from 2011 and 2012 for 72 countries. Second, to measure the impacts of trade facilitation measures, the analysis includes dummy variables for the presence of an authorized economic operator program, the existence of a single-window program in the countries in the sample, and the existence of a mutual recognition arrangement between pairs of countries in the sample. The results show that the presence of an authorized economic operator program and the existence of a single-window program will improve countries' trade performance. By contrast, the existence of a mutual recognition arrangement will not necessarily improve countries' trade performance. These results suggest that, in general, trade facilitation measures as a whole will help countries improve their trade performance.

Annotation With contributions from 35 leading economists, this forward-looking book explores the future of development economics against the background of the past half-century of development thought and practice. Outstanding representatives of the past two generations of development economists assess development thinking at the turn of the century and look to the unsettled questions confronting the next generation. The volume offers a thorough analysis of the broad range of issues involved in development economics, and it is especially timely in its critique of what is needed in development theory and policy to reduce poverty. An overriding issue is whether in the future development economics is to be regarded simply as applied economics or whether the nature and scope of development economics will constitute a need for a special development theory to supplement general economic theory. *Frontiers of Development Economics* is

an ideal reference for all those working in the international development community. A Copublication of the World Bank and Oxford University Press.

A Forward-Looking Retrospective

Trade Facilitation & Competitiveness Project Performance Measurement System

Case Studies from Asia

Impact on Peru's Exporters

Can it Really Facilitate Trade?

The Impact of Regional Trade Agreements and Trade Facilitation in the Middle East and North Africa Region

This report describes how Central Asia Regional Economic Cooperation (CAREC) corridor performance measurement and monitoring (CPMM) helps to achieve the objectives of the CAREC Transport and Trade Facilitation Strategy and its Implementation Action Plan. It presents the CPMM methodology and discusses the roles and responsibilities of key stakeholders, especially the private sector. It highlights ongoing efforts to provide accurate and reliable indicators despite the challenges of measuring corridor performance in the CAREC context. The extensive depth of data collected and the richness of information CPMM has been providing since 2009 supports detailed policy analysis and formulation. Trade facilitation indicators have been developed to inform CAREC's Development Effectiveness Review. These indicators provide a basis of comparison or benchmarking of one location (border crossing point or corridor segment) against another in terms of (i) the efficiency of border management agency policies and procedures in regulating trade, (ii) infrastructure quality, and, in due course, (iii) the quality of performance of trade logistics service providers. The four indicators include the standard measures of time and cost as the main components. Selected corridor performance data are then analyzed to identify the physical and non-physical barriers to trade and transit traffic encountered at specific locations, helping to pinpoint the causes of excessive delays and costs. With this study, it underscores the value of CPMM for CAREC countries (and for countries participating in other subregional programs) as they develop policies and consider investments to facilitate trade.

As tariffs have fallen worldwide, the increasing importance of non-tariff policies for further trade liberalization has become widely recognized. The methods for assessing the potential effects of such liberalization have lagged significantly behind those available for analyzing tariffs. This book is the first volume that comprehensively addresses this gap. It has been designed to be useful to both economists and policymakers, especially for those involved in communicating ideas and results between economists and policymakers. This indispensable book contains cutting-edge discussions of the full range of methodologies used in this area, including business surveys, summary statistics such as effective rates of protection and price gaps, time-series and panel econometrics, and simulation methods such as computable general equilibrium. It covers the entire spectrum of policies under discussion in current trade negotiations, including trade facilitation, services policies, quantitative measures, customs procedures, standards, movement of natural persons, and anti-dumping. Some prominent contributors to this book are Bijit Bora (World Trade Organization), John Wilson, Tsunehiro Otsuki and Vlad Manole (World Bank), Catherine Mann (Institute of International Economics), Alan Deardorff and Robert Stern (University of Michigan), Joe Francois (Erasmus University), Dean Spinanger (University of Kiel), Antoni Estevadeordal and Kati Suominen (Inter-American Development Bank), Thomas Prusa (Rutgers University), Thomas Hertel and Terrie Walmsley (Purdue University), Scott Bradford (Brigham Young University), Judith Dean, Robert Feinberg, Soamiely Andriamananjara and Marinos Tsigas (US International Trade Commission).

Border clearance processes by customs and other agencies are among the most important and problematic links in the global supply chain. Delays and costs at the border undermine a country's competitiveness, either by taxing imported inputs with deadweight inefficiencies or by adding costs and reducing the competitiveness of exports. This book provides a practical guide to assist policy makers, administrators, and border management professionals with information and advice on how to improve border management systems, procedures, and institutions.
