As the outcome of the seventh international congress, the papers in this volume cover a wide range of topics related to the main theme of the conference, titled "Current Debates in Social Sciences", and basically focuses Sustainability in Architecture, Urban Design and Environmental Studies. In this context, the articles in the book draw attention to the different aspects and scales about design and planning processes including architecture, urban design and environment studies. We believe that these studies would contribute to the development of debates in social sciences and encourage interdisciplinary approaches.

Basic And Applied Soil Mechanics Is Intended For Use As An Up-To-Date Text For The Two-Course Sequence Of Soil Mechanics And Foundation Engineering Offered To Undergraduate Civil Engineering Students. It Provides A Modern Coverage Of The Engineering Properties Of Soils And Makes Extensive Reference To The Indian Standard Codes Of Practice While Discussing Practices In Foundation Engineering. Some Topics Of Special Interest, Like The Schmetrmann Procedure For Extrapolation Of Field Compressibility, Determination Of Secondary Compression, Lambes Stress - Path Concept, Pressure Meter Testing And Foundation Practices On Expansive Soils Including Certain Widespread Myths, Find A Place In The Text.The Book Includes Over 160 Fully Solved Examples, Which Are Designed To Illustrate The Application Of The Principles Of Soil Mechanics In Practical Situations. Extensive Use Of Si Units, Side By Side With Other Mixed Units, Makes It Easy For The Students As Well As Professionals Who Are Less Conversant With The Si Units, Gain Familiarity With This System Of International Usage. Inclusion Of About 160 Short-Answer Questions And Over 400 Objective Questions In The Question Bank Makes The Book Useful For Engineering Students As Well As For Those Preparing For Gate, Upsc And Other Qualifying Examinations.In Addition To Serving The Needs Of The Civil Engineering Students, The Book Will Serve As A Handy Reference For The Practising Engineers As Well.

TRANSPORTATION PLANNING : PRINCIPLES, PRACTICES AND POLICIES

This book (in three volumes) comprises the proceedings of the Fifth Conference of Transportation Research Group of India (CTRG2019) focusing on emerging opportunities and challenges in the field of transportation of people and freight. The contents of the volume include characterization of conventional and innovative pavement materials, operational effects of road geometry, user impact of multimodal transport projects, spatial analysis of travel patterns, socio-economic impacts of transport projects, analysis of transportation policy and planning for safety and security, technology enabled models of mobility services, etc. This book will be beneficial to researchers, educators, practitioners and policy makers alike.

The idea of the book floated about seven years ago, back in 2015, in the reading room of Bhai Gurdas Library, Guru Nanak Dev University, Amritsar when I (Sakshi Sahni) was preparing for my Ph.D. entrance exam along with Hardeep Sekhon who was preparing for Assistant Town Planner exam. As time flew, Sanjay Mishra got involved with the tedious task of typing registers. Puneet Mehra got involved in co-ordinating, sorting and arranging the PPSC papers. Simranjot Singh took all the task of sketching and preparing illustrations using various software like Autocad, Sketchup, coral draw, photo shop etc. Gulpreet Kaur helped in the academic section editing and drafting. Rawal Singh helped in history of Architecture questions and its framing. The huge daunting task which seemed impossible was completed in the span of seven years by consistent efforts of all the authors with grace of almighty. With all of us placed at different locations, managed to contribute what we could do at our best. Planning students were great motivation and inspiration to us for whom the work has been produced and will help in their PPSC and GATE exam preparation. Since all the authors are the product of Guru Ram Das school of Planning, who made us what we are today we would sincerely like to express our gratitude towards our alma mater and would like to dedicate this book to Guru Ram Das ji and to the Department which is celebrating its 50th anniversary this year.

Aditya is a confused soul. He is unclear about his ambitions or goals in life. He hates engineering from the core of his heart, but destiny has other plans for him as he ends up in an engineering college despite his wishes. Aditya's search for true love comes to a halt when he runs into Riya, a fellow college student. Just when things are going great between the two, an unexpected tragedy strikes. Will their love be able to fight against the odds?

Trafficking of persons is a modern-day form of slavery, threatening the dignity and security of millions of people throughout the world. Virtually every country in the world and every state of India is affected by this crime as a place of origin, transit or destination for victims. This book is an attempt to discuss various issues of human trafficking, including perspectives of various stakeholders. The book argues that crime cannot be dealt with only by applying piecemeal tactics. Instead, it will require an organised professional, multi-disciplinary and multi-agency approach, calling for concerted, collaborative and participatory efforts of all stakeholders. All the essays included in this book are original works delving deeply into various forms of human trafficking. They are organised into different themes such as sexual exploitation, child trafficking, trafficking outside India, legal aspects, state experiences and case studies.

Over the time, Intelligent Transport System (ITS) has become important for any country not only for traffic congestion management, but also for modern infrastructure and safety. Since there is a dearth of literature on this subject, this book attempts to fill the gap and provides a holistic work on ITS encompassing theory, examples and case studies on various facets in both road and railway sectors. The basic principles of various technologies used for ITS have been explained in such a manner that students from non-technical background can also comprehend them with ease. It also discusses the emerging technologies such as autonomous vehicles, electric vehicles, cooperative vehicle highway system, automated highway systems, 5G mobile technology, etc. Considering the need of huge funds required for ITS implementation, the text provides various funding options available. Conclusively, it is a unique book that contains all aspects of ITS which a student of engineering is expected to know. The book is intended as a text for postgraduate students of transportation engineering and as a reference book for professionals such as transport planners, town planners, traffic engineers, transit operators and consultants. Key Features, • ITS architecture with a number of case studies based on real-life situation • Concept of smart city, importance of advanced transport system, and applications of ITS technologies in smart cities • ITS in Rail sector—intelligent trains, train control systems and intelligent train maintenance practices • Chapter-end questions for practice and bibliography
