"On January 26, 1996, Dave Schultz, Olympic gold medal winner and wrestling champion, was shot in the back by du Pont heir John E. du Pont at the family's famed Foxcatcher Farm estate in Pennsylvania. Following the murder, du Pont barricaded himself in his home for two days before he was finally captured. How did the so-called best friend of amateur wrestling come to commit such a horrifying, senseless murder? For the first time ever, Dave's brother, Mark--another Olympic gold medal-winning wrestler under du Pont's patronage--tells the full story. Fascinating, powerful, and deeply personal, Foxcatcher is a riveting account as told by the only person

The shooting at Columbine High School riveted national attention on violence in the nation's schools. This dramatic example signaled an implicit and growing fear that these events would continue to occur and even escalate in scale and severity. How do we make sense of the tragedy of a school shooting or even draw objective conclusions from these incidents? *Deadly Lessons* is the outcome of the National Research Council's unique effort to glean lessons from six case studies of lethal student violence. These are powerful stories of parents and teachers and troubled youths, presenting the tragic complexity of the young shooter's social and personal circumstances in rich detail. The cases point to possible causes of violence and suggest where interventions may be most effective. Readers will come away with a better understanding of the potential threat, how violence might be prevented, and how healing might be promoted in affected communities. For each case study, *Deadly Lessons* relates events leading up to the violence, provides quotes from personal interviews about the incident, and explores the impact on the community. The case studies center on: Two separate incidents in East New York in which three students were killed and a teacher was seriously wounded. A shooting on the south side of Chicago in which one youth was killed and two wounded. A shooting into a prayer group at a Kentucky high school in which three students were killed. The killing of four students and a teacher and the wounding of 10 others at an Arkansas middle school. The shooting of a

THE MAMMOTH BOOK OF TRUE CRIME is a compelling and comprehensive survey of crime and bad behavior-- on both sides of the law-- from veteran true crime writer Jim Fisher. Readers can test their knowledge of crime, criminal law, and policing by taking the 100-question exam at the end of the book. From the author of eleven published works of non-fiction-- including books on the Lindbergh kidnapping case, false confessions, scam artists, Amish murder, and forensic science-- and the popular blog, Jim Fisher True Crime.

In July 1997, twenty-five of America's most influential journalists sat down to try and discover what had happened to their profession in the years between Watergate and Whitewater. What they knew was that the public no longer trusted the press as it once had. They were keenly aware of the pressures that advertisers and new technologies were putting on newsrooms around the country. But, more than anything, they were aware that readers, listeners, and viewers — the people who use the news — were turning away from it in droves. There were many reasons for the public's growing lack of trust. On television, there were the ads that looked like news shows and programs that presented gossip and press releases as if they were news. There were the "docudramas," television movies that were an uneasy blend of fact and fiction and which purported to show viewers how events had "really" happened. At newspapers and magazines, celebrity was replacing news, newsroom budgets were being slashed, and editors were pushing journalists for more "edge" and "attitude" in place of reporting. And, on the radio, powerful talk personalities led their listeners from

Online Library True False Questions Edinboro University Of Pennsylvania Free

sensation to sensation, from fact to fantasy, while deriding traditional journalism. Fact was blending with fiction, news with entertainment, journalism with rumor. Calling themselves the Committee of Concerned Journalists, the twenty-five determined to find how the news had found itself in this state. Drawn from the committee's years of intensive research, dozens of surveys of readers, listeners, viewers, editors, and journalists, and more than one hundred intensive interviews with journalists and editors, The Elements of Journalism is the first book ever to spell out — both for those who create and those who consume the news — the principles and responsibilities of journalism. Written by Bill Kovach and Tom Rosenstiel, two of the nation's preeminent press critics, this is one of the most provocative books about the role of information in society in more than a generation and one of the most important ever written about news. By offering in turn each of the principles that should govern reporting, Kovach and Rosenstiel show how some of the most common conceptions about the press, such as neutrality, fairness, and balance, are actually modern misconceptions. They also spell out how the news should be gathered, written, and reported even as they demonstrate why the First Amendment is on the brink of becoming a commercial right rather than something any American citizen can enjoy. The Elements of Journalism is already igniting a national dialogue on issues vital to us all. This book will be the starting point for discussions by journalists and members of the public about the nature of journalism and the access that we all enjoy to information for years to come.

The story of Dr. Kent and Amber Brantly's call to serve their neighbors, as well as Kent's fight for life against Ebola, and Amber's struggle to support him from half a world away. Dr. Brantly reminds readers of the risk, honor, and joy to be known when God and others are served without reservation.

At just forty-one years old, Dr. Autumn Klein, a neurologist specializing in seizure disorders in pregnant women, had already been named chief of women's neurology at Pittsburgh's largest health system. More than just successful in her field, Dr. Klein was beloved - by her patients, colleagues, family, and friends. She collapsed suddenly on April 17, 2013, writhing in agony on her kitchen floor, and died three days later. The police said her husband, Dr. Robert Ferrante, twenty-three years Klein's senior, killed her through cyanide poisoning. Though Ferrante left a clear trail of circumstantial evidence, Klein's death from cyanide might have been overlooked if not for the investigators who were able to use Ferrante's computer, statements from the staff at his lab, and his own seemingly odd actions at the hospital during his wife's treatment to piece together what appeared to be a long-term plan to end his wife's life. In Death by Cyanide, Paula

Reed Ward, reporter for the Pittsburgh Post-Gazette, describes the murder investigation and the trial in this sensational case, taking us from the poisoning and the medical staff's heroic measures to save Klein's life to the investigation of Ferrante and the emotion and drama inside the courtroom.

Cybernetics (loosely translated from the Greek): “a helmsman who steers his ship to port.” Psycho-Cybernetics is a term coined by Dr. Maxwell Maltz, which means, “steering your mind to a productive, useful goal so you can reach the greatest port in the world, peace of mind.” Since its first publication in 1960, Maltz’s landmark bestseller has inspired and enhanced the lives of more than 30 million readers. In this updated edition, with a new introduction and editorial commentary by Matt Furey, president of the Psycho-Cybernetics Foundation, the original text has been annotated and amplified to make Maltz’s message even more relevant for the contemporary reader. “Before the mind can work efficiently, we must develop our perception of the outcomes we expect to

reach. Maxwell Maltz calls this Psycho-Cybernetics; when the mind has a defined target it can focus and direct and refocus and redirect until it reaches its intended goal.”

—Tony Robbins (from Unlimited Power) Maltz was the first researcher and author to explain how the self-image (a term he popularized) has complete control over an individual’s ability to achieve (or fail to achieve) any goal. And he developed techniques for improving and managing self-image—visualization, mental rehearsal, relaxation—which have informed and inspired countless motivational gurus, sports psychologists, and self-help practitioners for more than fifty years. The teachings of Psycho-Cybernetics are timeless because they are based on solid science and provide a prescription for thinking and acting that lead to quantifiable results.

Covering the turbulent period of the 1990s, this book examines such issues as the impact on Cuba of the Soviet Union's collapse, the country's social malaise under economic scarcity, the reorganization of its economy, changes in its political system, problems in its

relations with the United States, and the renaissance of Cuban religious life in the aftermath of the pope's visit. Azicri offers an objectively researched study that addresses many of the assumptions made by partisan participants. Demonstrating how Cuba's ongoing reform process has allowed it to avoid the fate of other Soviet bloc regimes, he maintains that Havana has continually reinvented the nature of Cuban socialism. Drawing on original sources and scholarly studies from Cuba, the United States, and elsewhere, he argues that a more restrained and limited socialism is suitable to today's Cuba and explains why such a system probably will prevail beyond Castro.

*"Extravagant," "perverse." The Roman world rendered harsh judgments upon early Christianity--including branding Christianity "new." Novelty was no Roman religious virtue. Nevertheless, as Larry W. Hurtado shows in *Destroyer of the gods*, Christianity thrived despite its new and distinctive features and opposition to them. Unlike nearly all other religious groups, Christianity utterly rejected the traditional gods of the Roman world. Christianity also offered a new and different kind of religious identity, one not based on ethnicity. Christianity was distinctively a "bookish" religion, with the production, copying, distribution, and reading of texts as central to its faith, even preferring a distinctive book-form, the codex. Christianity insisted that its adherents behave differently: unlike the simple ritual observances characteristic of the pagan religious*

environment, embracing Christian faith meant a behavioral transformation, with particular and novel ethical demands for men. Unquestionably, to the Roman world, Christianity was both new and different, and, to a good many, it threatened social and religious conventions of the day. In the rejection of the gods and in the centrality of texts, early Christianity obviously reflected commitments inherited from its Jewish origins. But these particular features were no longer identified with Jewish ethnicity and early Christianity quickly became aggressively trans-ethnic--a novel kind of religious movement. Its ethical teaching, too, bore some resemblance to the philosophers of the day, yet in contrast with these great teachers and their small circles of dedicated students, early Christianity laid its hard demands upon all adherents from the moment of conversion, producing a novel social project. Christianity's novelty was no badge of honor. Called atheists and suspected of political subversion, Christians earned Roman disdain and suspicion in equal amounts. Yet, as Destroyer of the gods demonstrates, in an irony of history the very features of early Christianity that rendered it distinctive and objectionable in Roman eyes have now become so

commonplace in Western culture as to go unnoticed. Christianity helped destroy one world and create another.

Why is debate over the free will problem so intractable? In this broad and stimulating look at the philosophical enterprise, Richard Double uses the free will controversy to build on the subjectivist conclusion he developed in The Non-Reality of Free Will (OUP 1991). Double argues that various views about free will--e.g., compatibilism, incompatibilism, and even subjectivism--are compelling if, and only if, we adopt supporting metaphilosophical views. Because metaphilosophical considerations are not provable, we cannot show any free will theory to be most reasonable. Metaphilosophy and Free Will deconstructs the free will problem and, by example, challenges

Listening to Killers offers an inside look at twenty years' worth of murder files from Dr. James Garbarino, a leading expert psychological witness who listens to killers so that he can testify in court. The author offers detailed accounts of how killers travel a path that leads from childhood innocence to lethal violence in adolescence or adulthood. He places the emotional and moral damage of each individual killer within a larger scientific framework of social, psychological, anthropological, and biological research on human development. By linking individual cases to broad social and cultural issues and illustrating the social toxicity and unresolved trauma that drive some people to kill, Dr. Garbarino highlights the humanity we share with killers and the role of understanding and empathy in breaking the cycle of violence.
