The leading reference for the diagnosis and management of fluid, electrolyte, and acid-base imbalances in small animals, *Fluid, Electrolyte, and Acid-Base Disorders in Small Animal Practice*, 4th Edition provides cutting-edge, evidence-based guidelines to enhance your care of dogs and cats. Information is easy to find and easy to use, with comprehensive coverage including fluid and electrolyte physiology and pathophysiology and their clinical applications, as well as the newest advances in fluid therapy and a discussion of a new class of drugs called vaptans. Lead author Stephen DiBartola is a well-known speaker and the "go-to" expert in this field, and his team of contributors represents the most authoritative and respected clinicians and academicians in veterinary medicine. Over 30 expert contributors represent the "cream of the crop" in small animal medicine, ensuring that this edition provides the most authoritative and evidence-based guidelines. Scientific, evidence-based insights and advances integrate basic physiological principles into practice, covering patient evaluation, differential diagnosis, normal and abnormal clinical features and laboratory test results, approaches to therapy, technical aspects of therapy, patient monitoring, assessing risk, and prediction of outcomes for each disorder. Hundreds of tables, algorithms, and schematic drawings demonstrate the best approaches to diagnosis and treatment, highlighting the most important points in an easy-access format. Drug and dosage recommendations are included with treatment approaches in the *Electrolyte Disorders* section. Clear formulas in the *Fluid Therapy* section make it easier to determine the state of dehydration, fluid choice, and administration rate and volume in both healthy and diseased patients. Updated chapters cover the latest advances in fluid therapy in patient management, helping you understand and manage a wide range of potentially life-threatening metabolic disturbances. Expanded *Disorders of Sodium and Water* chapter includes information on a new class of drugs called vaptans, vasopressin receptor antagonists that may soon improve the ability to manage patients with chronic hyponatremia. Hundreds of new references cover the most up-to-date advances in fluid therapy, including renal failure and shock syndromes.

You'll find the answer to this complex situation and many more."--Jacket.

Assure your mastery of medical-surgical nursing knowledge while honing your critical thinking and test-taking

skills. The 3rd Edition of this popular resource features over 2,300 questions (including 550 alternate-format questions) that reflect the latest advances in medical-surgical nursing and the latest NCLEX-RN® test plan. They organize the seemingly huge volume of information you must master into manageable sections divided by body systems and specific diseases

Treatment and Management

Cerebral Autoregulation and Neurovascular Coupling in Brain Disorders

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Neuromuscular Disorders presents a multi-disciplinary approach to the management and therapeutic treatment of the full range of neuromuscular disorders and resulting complications. Dr. Tulio Bertorini and a contributing team of the world's leading authorities in the field provide the latest tools and strategies for minimizing disability and maximizing quality of life. Effectively treat your patients using the latest management tools and targeted therapeutic strategies. Manage all neuromuscular disorders as well as resulting complications through comprehensive coverage of diagnosis and evaluations, treatments, and outcomes. Apply the multi-disciplinary approach of an expert in clinical neuromuscular care and a team of world-renown contributors. Easily refer to tools for diagnosis, treatment algorithms, and drug tables included throughout the text.

The value of echocardiography in the diagnostic work-up of patients with suspected acute pulmonary embolism.- New developments in the thrombolytic therapy of venous thrombosis.- Mechanism of blood coagulation. Newer aspects of anticoagulant and antithrombotic therapy.MR-angiography in the diagnosis of pulmonary embolism.Scintigraphy-ventilation/perfusion scanning and imaging of the embolus.- Clinical course and prognosis of acute pulmonary embolism.- The molecular mechanisms of inherited thombophilia.

Critical care medicine is an evolving speciality in which the amount of available information is growing daily and spread across a myriad of books, journals and websites. This essential guide brings together this information in an easy-to-use format. Up-to-date, relevant, and evidence-based information on the management of the critically ill is combined in one resource, ideal for the use of Intensive Care Units, High Dependency Units, acute medical or surgical wards, Accident and Emergency departments and operating theatres. The book is designed such that each subject will form a self-contained topic in its own right, laid out across two or four pages to facilitate the key aim of rapid and easy access to information. This

makes the information included simple to find, read and absorb, so that the book can be consulted in the clinic or ward setting for information on the optimum management of a particular condition. With chapters written by internationally renowned critical care specialists and edited by the three of the leading figures in UK Critical Care, this book should be an essential resource for all critical care physicians.

Oxford Desk Reference: Critical Care

Wilkin's Clinical Assessment in Respiratory Care, 8th Edition, is the world-leading respiratory care text devoted exclusively to patient assessment. This comprehensive book prepares you to assist physicians in the decision-making process regarding treatment, evaluation of the treatment's effectiveness, and determining if changes in the treatment need to be made. Written by Dr. Albert Heuer, and Dr. Craig Scanlan, it emphasizes learning objectives through well-organized need-to-know information and tips. Plus, this streamlined edition helps you focus on key content and prepare for the CRT credentialing exam by aligning material within the book to the NBRC exam matrices. Case studies offer real-life clinical scenarios challenging you to interpret data and make accurate patient assessments. Questions to Ask boxes identify what practitioners should ask patients (i.e., coughing, sputum, shortness of breath) or questions to ask themselves on various subjects (i.e., lung sounds they are hearing, blood pressure, respiratory rate) in order to provide effective patient care. Learning objectives, chapter outlines, chapter overviews, and key terms lists in each chapter, help you focus on key content. Key Point summaries emphasize the learning objectives and provide an overview of important material. Simply Stated boxes highlight and promote understanding of important concepts. A comprehensive approach provides you with the important information you need to know in order to effectively assess patients. NEW! Thoroughly updated content reflects the most recent changes to the NBRC exam. NEW! Inclusion of the latest technological advancements relates to the assessment of critical care and non-critical care patients. NEW! Full-color design enhances learning and understanding by making key concepts easy to find. "This charming little book offers students and professionals alike a chance to review their

knowledge of pathophysiology in a simple and easy to use manner ... It summarises all key areas and offers the reader a quick questions and answers book which is unique in the paramedic literature world. A fantastic book." Ruth Lambert, Qualified Paramedic, UK Paramedics! Test yourself in Pathophysiology is the essential self-test resource to help paramedics revise and excel in their pathophysiology modules and exams. With over 250 questions, 60 glossary terms, fully explained answers and explanations, this book covers the most common presentations seen in the paramedic practice, accessible through: Multiple choice questions True or false questions Fill in the blank questions Labelling exercises An extensive glossary explains all the key terms and disease names Each main body system has its own chapter, so you can get in depth practice for your exams. Body systems covered include: Integumentary system Nervous system and special senses Cardiovascular system Digestive system Inflammation, infection and immunity Musculoskeletal system Endocrine system Respiratory system Urinary system Reproductive systems

Covering every area of the ABPN board exam, the 3rd Edition of Psychiatry Test Preparation and Review Manual, by Drs. J. Clive Spiegel and John M. Kenny, includes 1,100 questions, online video vignettes and an online timed assessment to prepare you for certification or recertification success. You'll know exactly what to expect when exam day arrives, thanks to current coverage of the latest research in both psychiatry and neurology, as well as a format that precisely mimics all aspects of the written exam. Features six tests of 150 multiple-choice questions each, as well as 160 multiple-choice questions related to case vignettes. Allows you to see results broken down by topic online, so you can target areas needing further study. Bookmarking and score archiving are also available online. Allows you to exclude topics which are not included on the MOC, such as neuroscience and neurology, so you can more narrowly focus your study. Gives clear explanations for both insufficient/incorrect and correct answers, and provides recommended readings from key textbooks. Reflects the latest research and clinical practice in both psychiatry and neurology. NEW! Eight new video vignettes featuring patient interviews, each with accompanying multiple-choice questions. NEW! All questions relating to diagnostic criteria have been updated to the DSM-5.

Now in a fully updated 9th Edition, Kendig's Disorders of the Respiratory Tract in Children, by

Drs. Robert Wilmott, Andrew Bush, Robin Deterding, and Felix Ratjen, continues to provide authoritative, evidence-based information to residents, fellows, and practitioners in this wide-ranging specialty. Bringing key knowledge from global experts together in one easy-to-understand volume, it covers everything from the latest basic science and its relevance to today's clinical issues, to improving patient outcomes for the common and rare respiratory problems found in newborns and children worldwide. Uses succinct, straightforward text, numerous tables and figures, summaries at the end of each chapter, and more than 500 full-color images to convey key information in an easy-to-digest manner. Contains new chapters reflecting expanding knowledge on the respiratory complications of Down syndrome and other genetic disorders, modern molecular therapies for cystic fibrosis and asthma, and pulmonary embolism and thromboembolic disease. Features a new templated format with more descriptive headings and bulleted text for quick reference and navigation. Covers today's key issues, including the genetic basis of respiratory disease, new and emerging respiratory infections, interstitial lung diseases in infants and young children, technology and diagnostic techniques for pulmonary function tests, emerging lung infections, and new therapies for cystic fibrosis and asthma. Provides up-to-date instruction on important procedures, such as bronchoscopy and pulmonary function testing. Highlights the knowledge and expertise of three new editors, as well as more than 100 world authorities in the fields of pediatrics, pulmonology, neurology, microbiology, cardiology, physiology, diagnostic imaging, critical care, otolaryngology, allergy, and surgery.

Clinical Manifestations & Assessment of Respiratory Disease - E-Book

A Comprehensive Clinical-Radiological Overview

Easy Steps to Passing

The BLUE Protocol

A Clinical and Pathophysiological Approach

A Nursing Therapeutics Manual

Lung disease is a major indication for the admittance of the neonate to a specialist intensive care unit, and is a particularly common complication in the pre-term baby where the lungs are insufficiently developed at birth and easily damaged by early treatments. As a consequence, this is an area of intensive international research activity. In this comprehensive update of the well-received first edition, leading researchers from all over the world have been invited

to contribute in their specialist areas. The book continues to provide detailed coverage of the pathogenesis, clinical and laboratory features and management of lung disorders in the neonate, with increased emphasis on the underlying immunology and major additions to the sections on respiratory support, chronic lung disease and abnormalities in lung growth and development to reflect the changes that have occurred in these areas since the previous edition appeared in 1995. Providing an unrivalled up-to-date statement on the problems that are faced in the neonatal intensive care unit on a daily basis, this is an invaluable addition to the bookshelves of neonatologists and other personnel involved in the care of critically ill babies.

A classic text since it was first published in 1974, the Lippincott Manual for Nursing Practice (LMNP) has provided essential nursing knowledge and up-to-date information on patient care for nearly 40 years. Now in its 10th edition, this full-color text continues to serve as the most comprehensive reference for practicing nurses and nursing students worldwide. Often referred as the 'Lippincott Manual' or simply the 'Lippincott', the LMNP is widely used as a procedure manual for many healthcare institutions (contains 157 Nursing Procedure Guidelines). It is also widely regarded as the Gold Standard for nursing practice in the classroom. Organized into five major parts, LMNP presents a comprehensive reference for all types of core nursing care. Part 1: Nursing Process & Practice; Part 2: Medical-Surgical Nursing; Part 3: Maternity & Neonatal Nursing; Part 4: Pediatric Nursing; Part 5: Psychiatric Nursing. Content is evidence-based with supporting articles highlighted in actual entries and procedure guidelines. Official Guidelines that shape practice are incorporated in to the content and include those from the National Institutes of Health, American Diabetes Association, American Heart Association, American Nurses Association, Joint Commission, AWHONN, and others. A companion Website includes full text, an image bank, and drug-related NCLEX®-style questions, FDA updates, and new clinical studies.

To meet your need for the effective board preparation this review book precisely mirrors the written Board exam. Psychiatry Board Review is the ideal self-study and pre-test manual for candidates for the written Part 1 of the Boards in Psychiatry. Its format creates the perfect high-yield source, consisting of four self-tests with 150 questions each, paralleling the format, subject matter, balance, and content of the Psychiatry written exams. Because your time is valuable, this book will help you focus your studies on material that has a high likelihood of appearing on the actual Boards. Allows for easy self study and exam preparation with an Individual test format. Simulates test conditions by allowing you to take self-timed tests. Provides a stand-alone source, eliminating the need for additional materials. Focuses on high-yield topics, such as neurology and visual material (patient photos, imaging, micrographs). Uses a multiple-choice question format that mirrors the examination style, to prepare you for the exact type of questions and conditions you'll experience when taking the test. Includes a CD-ROM to simulate computerized Boards. Provides comprehensive answer explanations.

The only respiratory care text devoted exclusively to patient assessment! By performing a thorough patient assessment, you'll be able to assist physicians in the decision-making process regarding treatment, in evaluating the treatment's effectiveness, and in determining if changes in the treatment need to be made. The book's comprehensive approach covers all of the most important aspects and topics of assessment. This edition is streamlined to emphasize learning objectives. And you can prepare for the CRT exam more effectively with the new NBRC Exam Matrix Correlation Guide! A comprehensive approach covers all of the most important aspects of assessment, so you can assess patients effectively. Additional Questions to Ask About boxes list questions that you should ask patients (e.g., coughing, sputum, shortness of breath) or ask yourself (e.g., lung sounds you are hearing, blood pressure, respiratory rate). Learning objectives, chapter outlines, chapter overviews, and key terms lists begin each chapter, preparing you for the key topics and content you will learn. Key Point summaries and assessment questions reflect and emphasize the key information identified in the learning objectives. Answers to assessment questions help you review by including rationales and page references to the textbook, by reflecting the NBRC format, and by supporting learning objectives. Enhanced Simply Stated boxes emphasize important concepts. Additional case studies help you apply chapter content to clinical scenarios. Content from the text is related to the NBRC exam matrix for the CRT exam on a companion Evolve website, helping you better

prepare for the difficult board exams. A new Neurological Assessment chapter focuses on conscious sedation. A discussion of health literacy addresses the importance of determining the patient's level of understanding when conducting a patient assessment. Discussions of the assessment of the obese patient prepare you for some of the unique challenges related to assessing obese patients (e.g., the physical exam and chest x-ray). Key Point summaries in every chapter emphasize the learning objectives and provide an easy-to-find overview. A list of abbreviations common to assessment is included on the inside of the cover for quick reference. Procedure checklists for common assessment procedures are included in a new appendix, with PDFs of the forms available on the Evolve website.

Neuromuscular Disorders E-Book

Acute Pulmonary Embolism

Neonatal Respiratory Disorders, 2Ed

An all-inclusive guide to fundamentals and medical-surgical nursing for the LPN/LVN, Foundations and Adult Health Nursing, 7th Edition covers the skills you need for clinical practice, from anatomy and physiology to nursing interventions and maternity, neonatal, pediatric, geriatric, mental health, and community health care. Guidelines for patient care are presented within the framework of the five-step nursing process; Nursing Care Plans are described within a case-study format to help you develop skills in clinical decision-making. Written by Kim Cooper and Kelly Gosnell, this text includes all of the content from their Foundations of Nursing and Adult Health Nursing books, including review questions to help you prepare for the NCLEX-PN® examination! Full-color, step-by-step instructions for over 100 skills show nursing techniques and procedures along with rationales for each. The 5-step Nursing Process connects specific disorders to patient care - with a summary at the end of each chapter. Nursing Care Plans emphasize patient goals and outcomes within a case-study format, and promotes clinical decision-making with critical thinking questions at the end of each care plan. Clear coverage of essential A&P is provided by an Introduction to Anatomy and Physiology chapter along with an overview of A&P in all body systems chapters. Student-friendly features enhance the learning of nursing skills with summary boxes for Patient Teaching, Health Promotion Considerations, Complementary and Alternative Therapy, Cultural Considerations, Older Adult Considerations, Home Care Considerations, Safety Alert, and Prioritization, Assignment, and Supervision. UNIQUE! Mathematics review in Dosage Calculation and Medication Administration chapter covers basic arithmetic skills prior to the discussion of medication administration. A focus on preparing for the NCLEX examination includes review questions and Get Ready for the NCLEX Examination! sections with key points organized by NCLEX Client Needs Categories. Evidence-Based Practice boxes provide synopses of nursing research articles and other scientific articles applicable to nursing, along with nursing implications for the LPN/LVN. Nursing Diagnosis boxes summarize nursing diagnoses for specific disorders along with the appropriate nursing interventions. UNIQUE! Delegation Considerations boxes provide parameters for delegation to nurse assistants, patient care technicians, and unlicensed assistive personnel. Medication Therapy tables provide

quick access to actions, dosages, precautions, and nursing considerations for commonly used drugs. NEW! Reorganized chapters make it easier to follow and understand the material. NEW! Icons in page margins indicate videos, audios, and animations on the Evolve companion website that may be accessed for enhanced learning. UPDATED illustrations include photographs of common nursing skills.

This book presents a systematic approach to the potential pulmonary complications of various systemic non-pulmonary pediatric disorders. Chapters focus on the pulmonary complications associated with: the major organ systems, types of disorders, metabolic conditions, and various modalities. Although specific diseases will be discussed, the main focus will be on describing the associated organ mechanisms and how they can negatively affect the respiratory system. Each chapter will also discuss methods of prevention, the diagnostic test(s) that may be necessary to diagnose or monitor these complications, and, if applicable, the recommended therapeutic modalities. Pulmonary Complications of Non-Pulmonary Pediatric Disorders provides pulmonologists, pediatricians, and other clinicians with a detailed, reliable explanation of seemingly unrelated signs and symptoms so they can form a more thorough differential diagnosis and prescribe the appropriate diagnostic tests and treatment.

Featuring more than 1,000 questions, video vignettes, and an online timed assessment, Psychiatry Test Preparation and Review Manual, 4th Edition, remains your #1 choice to prepare for successful exam results in both psychiatry and neurology. This trusted review covers every area of the ABPN board exam, and is also an excellent resource for MOC and PRITE study. Updated content includes questions regarding epidemiology, sexuality and gender, and substance addiction, as well as revisions to match DSM-5 criteria. Features six tests of 150 multiple-choice questions each, as well as 160 multiple-choice questions related to 25 case vignette videos. Allows you to see results broken down by topic online, so you can target areas needing further study.

Bookmarking and score archiving are also available online. Permits you to exclude topics which are not included on the MOC, such as neuroscience and neurology, so you can more narrowly focus your study. Brings you up to date with new information in epidemiology, LGBT sexuality and gender, and substance addiction, as well as the most current DSM-5 criteria. New case vignette videos also reflect these additional key areas. Gives clear explanations for both insufficient/incorrect and correct answers, and provides recommended readings from key textbooks.

Offering an authoritative, multidisciplinary approach to the complex issues associated with neuromuscular disease, Neuromuscular Disorders, 2nd Edition, provides the latest tools and strategies for minimizing disability and maximizing quality of life. Dr. Tulio Bertorini, an expert in clinical neuromuscular care, and a team of world-renowned contributors cover all management and therapeutic considerations regarding the full range of neuromuscular disorders and resulting complications. Provides comprehensive coverage of evaluation and diagnosis, treatments, and outcomes, including the latest management tools and targeted therapeutic strategies. Includes the latest updates in the field: genetic causes of hereditary disease, new autoimmune diseases, promising new therapies such as antisense oligonucleotides and gene therapies, and more. Features numerous drug tables, treatment algorithms, and clinical images throughout to aid in diagnosis and treatment.

Nurses! Test Yourself In Pathophysiology

Based on the 4th edition of the renowned textbook of the same name, this softcover manual focuses on the information necessary to make clinical decisions in the ICU. It begins with a crucial section on responding to emergency situations in the ICU. It proceeds to cover the most relevant clinical information in all areas of critical care including critical care monitoring, techniques and procedures, essential physiologic concerns, shock states, pharmacology, surgical critical care, and infectious diseases. The manual also contains thorough reviews of diseases by organ system: cardiovascular diseases, respiratory disorders, neurologic and gastrointestinal disorders, renal, endocrine, skin and muscle diseases, and hematologic/ oncologic diseases. This essential new resource is written in an easy-to-read style that makes heavy use of bulleted lists and tables and features an all-new full color format with a color art program. All critical care providers will find this a useful clinical resource.

Bringing together pathologists, clinicians and diagnostic radiologists to produce a simplified analysis and a unification of the existing concepts in the diagnosis and treatment of diffuse lung diseases, this volume highlights pathological changes and presents the latest diagnostic modalities. Detailed therapeutic strategies are proposed based on epidemiological findings, radiographic manifestations, and the complex pathophysiological basis of each disorder. The result will appeal not only to the sophisticated practitioner but will also provide material that is sufficiently organized and didactic to be used by the young physician. The pulmonary circulation is by nature difficult to evaluate for the clinician and a challenge to investigate by radiographic and hemodynamic methods. In recent years, the field has been revolutionized by major improvements in diagnostic approaches and therapies. Tools for the classification, diagnosis, and management of pulmonary embolism and pulmonary hypertension have been developed and optimized, providing clinicians with detailed and updated guidelines. This volume provides the latest information on the fast-growing and challenging field of acute and chronic pulmonary vascular disorders from some of the field's major leaders in research, education, and care. The topics discussed are relevant to chest physicians, thoracic surgeons, nurses, students, and teachers, and a well-balanced mix of contributions ensures that doctors, clinicians, and institutions from all around the world will find the information presented to be both informative and useful to their situations.

"Hypoxaemia is a major contributor to child deaths that occur worldwide each year; for a child with pneumonia

hypoxaemia increases the risk of death by up to 5 times. Despite its importance in virtually all types of acute severe illness, hypoxaemia is often not well recognized or well managed more so in settings where resources are limited. Oxygen therapy remains an inaccessible luxury for a large proportion of severely ill children admitted to hospitals in developing countries. This is particularly true for patients in small district hospitals, where, even if some facility for delivering oxygen is available, supplies are often unreliable and the benefits of treatment may be diminished by poorly maintained, inappropriate equipment or poorly trained staff with inadequate guidelines. Increasing awareness of these problems is likely to have considerable clinical and public health benefits in the care of severely ill children. Health workers should be able to know the clinical signs that suggest the presence of hypoxaemia and have more reliable means of detection of hypoxaemia. This be achieved through more widespread use of pulse oximetry, which is a non-invasive measure of arterial oxygen saturation. At the same time oxygen therapy must be more widely available; in many remote settings, this can be achieved by use of oxygen concentrators, which can run on regular or alternative sources of power. Having effective systems for the detection and management of hypoxaemia are vital in reducing mortality from pneumonia and other severe acute illnesses. Oxygen therapy is essential to counter hypoxaemia and many a times is the difference between life and death. This manual focuses on the availability and clinical use of oxygen therapy in children in health facilities by providing the practical aspects for health workers, biomedical engineers, and administrators. It addresses the need for appropriate detection of hypoxaemia, use of pulse oximetry, clinical use of oxygen and delivery systems and monitoring of patients on oxygen therapy. In addition, the manual addresses practical use of pulse oximetry, and oxygen concentrators and cylinders in an effort to improve oxygen systems worldwide."--Publisher's description

A Q&A Review Applying Critical Thinking to Test Taking

Psychiatry Test Preparation and Review Manual

Pulmonary Complications of Non-Pulmonary Pediatric Disorders

Foundations and Adult Health Nursing

How Tobacco Smoke Causes Disease

Paramedics! Test Yourself In Pathophysiology

This book is in the new Nurses! Test Yourself series and will offer a revision and study aid for student nurses undertaking their Year 1 2 & 3 pathophysiology / altered physiology / acute and critical illness module and related exam assessments.

A new edition of the classic text, is for respiratory care students who desire a complete and up to date exploration of the technical and professional aspects of respiratory care. With foundations in evidence-based practice, this resource reviews respiratory assessment, respiratory therapeutics, respiratory diseases, basic sciences and their application to respiratory care, the respiratory care profession, and much more. Edited and authored by leading experts, it incorporates

the latest information on the practice of respiratory care into a well-organized, reader-friendly guide to help students learn to develop care plans, critical thinking skills, strong communication and patient education skills, and the clinical leadership skills needed to succeed. This text provides essential information in a practical and manageable format for optimal learning and retention. Features include Clinical Practice Guidelines, Key Points, and Respiratory Recaps to help students apply knowledge to practice and retain key information, as well as hundreds of glossary terms with clear definitions, and concise explanations of important concepts and equations. Also includes full color photos and illustrations, and content cross-referencing the NBRC examination matrices.

Based on careful analysis of burden of disease and the costs of interventions, this second edition of 'Disease Control Priorities in Developing Countries, 2nd edition' highlights achievable priorities; measures progress toward providing efficient, equitable care; promotes cost-effective interventions to targeted populations; and encourages integrated efforts to optimize health. Nearly 500 experts - scientists, epidemiologists, health economists, academicians, and public health practitioners - from around the world contributed to the data sources and methodologies, and identified challenges and priorities, resulting in this integrated, comprehensive reference volume on the state of health in developing countries.

Alcohol Use Disorders and the Lung: A Clinical and Pathophysiological Approach is an excellent resource for clinicians who care for individuals affected by alcohol use disorders in diverse settings. Although alcohol abuse alone does not cause acute lung injury, it renders the lung susceptible to dysfunction in response to the inflammatory stresses of sepsis, trauma, and other clinical conditions recognized to cause acute lung injury. In parallel, these same pathophysiological effects of alcohol abuse significantly increase the risk of a wide range of serious lung infections. Many clinicians involved in the primary treatment of alcohol use disorders, such as addiction psychiatrists, will find this text of interest as it will expand their understanding of the health consequences of alcohol use disorders. In parallel, clinicians who specialize in pulmonary and/or critical care medicine will have a unique resource that provides a comprehensive review of the pathophysiology of alcohol-related lung disorders and insights into evolving therapeutic options in these vulnerable individuals. Alcohol Use Disorders and the Lung: A Clinical and Pathophysiological Approach fills a gap in the literature and presents the evolving clinical research that may soon lead to novel therapies that can improve lung health in individuals with alcohol use disorders and co-existing conditions such as HIV infection.

Learn to assess and treat respiratory care disorders! Now in full color, *Clinical Manifestations and Assessment of Respiratory Disease, 6th Edition* bridges normal physiology and pathophysiology to provide a solid foundation in recognizing and assessing conditions. Authors Terry Des Jardins and George G. Burton describe how to systematically gather clinical data, formulate an assessment, make an objective evaluation, identify the desired outcome, and design a safe and effective treatment plan, while documenting each step along the way. Unique coverage of Therapist-Driven Protocols (TDPs) prepares you to implement industry-approved standards of care. Unique! Clinical scenarios connect to specific diseases so you can better understand the disease and the treatment modalities used. Unique! A focus on assessment and Therapist-Driven Protocols (TDPs) emphasizes industry-approved standards of care, providing you with the knowledge and skills to implement these protocols into patient care. Case studies help in applying information to assessment and treatment. Overview boxes summarize the clinical manifestations caused by the pathophysiologic mechanisms of each disorder. End-of-chapter questions include multiple-choice, short answer, matching, and case studies to test knowledge and understanding, pointing out areas that might require further study. A glossary of key terms with definitions is included in the back of the book. Appendices offer easy access to information such as calculations, symbols, medications, and measurements, plus answers to selected case studies. A unique full-color design enhances content and shows realistic examples of diseases and conditions. Student-friendly features reinforce learning with chapter outlines, objectives, and key terms. A consistent presentation of disease information shows background, treatment, and assessment for each condition so you learn the material in a clear, cohesive manner. Over 15 additional case studies with answers are added to the companion Evolve website.

Everything you need to know about caring for patients—in one portable "must have" handbook! Put information on more than 240 diseases and disorders at your fingertips. Clear, comprehensive discussions of pathophysiology—with rationales in the test and intervention sections—help you deliver effective care with confidence.

Written by a pioneer in critical care ultrasound, this book discusses the basic technique and "signatures" of lung ultrasound and explains its main clinical applications. The tools and clinical uses of the BLUE protocol, which allows diagnosis of most cases of acute respiratory failure, are first described in detail. Careful attention is then devoted to protocols derived from the BLUE protocol – the FALLS protocol for diagnosis and management of acute circulatory

failure, the Pink protocol for use in ARDS, and the SESAME protocol for use in cardiac arrest – and to the LUCI-FLR program, a means of answering clinical questions while reducing radiation exposure. Finally, the book discusses all the possible settings in which lung ultrasound can be used, discipline by discipline and condition by condition. Lung Ultrasound in the Critically Ill comprehensively explains how ultrasound can become the stethoscope of modern medicine. It is a superb complement to the author's previous book, Whole Body Ultrasonography in the Critically Ill.

Includes Practice Test Questions Acute Care Nurse Practitioner Exam Secrets helps you ace the Nurse Practitioner Exam without weeks and months of endless studying. Our comprehensive Acute Care Nurse Practitioner Exam Secrets study guide is written by our exam experts, who painstakingly researched every topic and concept that you need to know to ace your test. Our original research reveals specific weaknesses that you can exploit to increase your exam score more than you've ever imagined. Acute Care Nurse Practitioner Exam Secrets includes: The 5 Secret Keys to NP Exam Success: Time is Your Greatest Enemy, Guessing is Not Guesswork, Practice Smarter, Not Harder, Prepare, Don't Procrastinate, Test Yourself; A comprehensive General Strategy review including: Make Predictions, Answer the Question, Benchmark, Valid Information, Avoid Fact Traps, Milk the Question, The Trap of Familiarity, Eliminate Answers, Tough Questions, Brainstorm, Read Carefully, Face Value, Prefixes, Hedge Phrases, Switchback Words, New Information, Time Management, Contextual Clues, Don't Panic, Pace Yourself, Answer Selection, Check Your Work, Beware of Directly Quoted Answers, Slang, Extreme Statements, Answer Choice Families; A comprehensive Content review including: Epidemiological Practices, Nosocomial Infections, Lipoproteins, Primary Hypertension, Hypertrophic Cardiomyopathy, Arrhythmias, Congenital Defects, Acute Respiratory Distress Syndrome, Pathophysiology, Addison Disease, Transient Ischemic Attack, Proteinuria, Glomerular Filtration Rate, Hemodialysis, Fournier Gangrene, Benign Prostatic Hyperplasia, Gastroesophageal Reflux Disease, Polycystic Ovarian Syndrome, Crohn Disease, Acute Myelogenous Leukemia, Melanoma, Systemic Lupus Erythematosus, Marfan Syndrome, Degenerative Joint Disease, Febrile Patient, Hypovolemic Shock, Wound Healing, Evidence-Based Medicine, Serotonin Syndrome, Hypomanic Episode, Obsessive-Compulsive Disorder, and much more...
