Although we have been successful in our careers, they have not turned out quite as we expected. We both have changed positions several times-for all the right reasons-but there are no pension plans vesting on our behalf. Our retirement funds are growing only through our individual contributions. Michael and I have a wonderful marriage with three great children. As I write this, two are in college and one is just beginning high school. We have spent a fortune making sure our children have received the best education available. One day in 1996, one of my children came home disillusioned with school. He was bored and tired of studying. "Why should I put time into studying subjects I will never use in real life?" he protested. Without thinking, I responded, "Because if you don't get good grades, you won't get into college." "Regardless of whether I go to college," he replied, "I'm going to be rich." Introduction to Business covers the scope and sequence of most introductory business courses. During the past decade there has been an explosion in computation and information technology. With it have come vast amounts of data in a variety of fields such as medicine, biology, finance, and marketing. The challenge of understanding these data has led to the development of new tools in the field of statistics, and spawned new areas such as data mining, machine learning, and bioinformatics. Many of these tools have common underpinnings but are often expressed with different terminology. This book describes the important ideas in these areas in a common conceptual framework. While the approach is statistical, the emphasis is on concepts rather than mathematics. Many examples are given, with a liberal use of color graphics. It should be a valuable resource for statisticians and anyone interested in data mining in science or industry. The book's coverage is broad, from supervised learning (prediction) to unsupervised learning. The many topics include neural networks, support vector machines, classification trees and boosting---the first comprehensive treatment of this topic in any book. This major new edition features many topics not covered in the original, including graphical models, random forests, ensemble methods, least angle regression & path algorithms for the lasso, non-negative matrix factorization, and spectral clustering. There is also a chapter on methods for "wide" data (p bigger than n), including multiple testing and false discovery rates. Trevor Hastie, Robert Tibshirani, and Jerome Friedman are professors of statistics at Stanford University. They are prominent researchers in this area: Hastie and Tibshirani developed generalized additive models and wrote a popular book of that title. Hastie co-developed much of the statistical modeling software and environment in R/S-PLUS and invented principal curves and surfaces. Tibshirani proposed the lasso and is co-author of the very successful *An Introduction to the Bootstrap*. Friedman is the co-inventor of many data-mining tools including CART, MARS, projection pursuit and gradient boosting.

A guide to business writing covers grammar, usage, and style, and provides instructions on following the writing process.

BUSINESS AND SOCIETY employs a stakeholder management framework. This framework emphasizes a business's social, legal, political, and ethical responsibilities to both external and internal groups that have a stake, or interest, in that business. It is a fundamental goal of the course that students really get that responsible business decision makers strive to balance and protect the interests of various stakeholders—investors, employees, community, environment, etc. An emphasis is also placed on the fact that one needs to understand that business situations will continually arise that will truly test one's values and ethics. BUSINESS AND SOCIETY not only exposes students to diverse and important stakeholder and ethical frameworks for considering and protecting stakeholder interests, through its use of cases and other real-world applications, this text enhances the precision with which students think about and practice ethical decision making. Opportunities to apply stakeholder and ethical systems to specific business problems abound, and questions are provided with all cases and applications to focus student reasoning, ensuring excellent preparation for class discussions.
