These New editions of the successful, highly-illustrated study/revision guides have been fully updated to meet the latest specification changes. Written by experienced examiners, they contain in-depth coverage of the key information plus hints, tips and guidance about how to achieve top grades in the A2 exams.

This thoroughly updated edition of the bestselling Psychology for A2 Level has been written specifically for the new AQA-A Psychology A2-level specification for teaching from September 2009. It is the ideal follow-up to AS Level Psychology, 4th edition by the same author, but also to any AS-level textbook. This full-colour book, which builds on the ideas and insights explored at AS Level to promote a deeper understanding of psychology, is written in an engaging and accessible style by a highly experienced author. It incorporates contributions, advice and feedback from a host of A-Level teachers and psychologists including

Philip Banyard, Evie Bentley, Clare Charles, Diana Dwyer, Mark Griffiths and Craig Roberts. At this level, students select options from a range of specified topics and this book includes chapters on all of the compulsory and optional topics that are on the new A2 syllabus in sufficient depth for the requirements of the course. It has a new focus on the nature and scope of psychology as a science with an emphasis on how science works, and guidance on how to engage students in practical scientific research activities. Presented in a clear, reader-friendly layout, the book is packed with advice on exam technique, hints and tips to give students the best chance possible of achieving the highest grade. The book is supported by our comprehensive package of online student and teacher resources, A2 Psychology Online. Student resources feature a wealth of multimedia materials to bring the subject to life, including our new A2 revision guide and A2 Workbook, multiple choice quizzes, revision question tips, interactive exercises and podcasts by key figures in

psychology. Teacher resources include a teaching plan, chapter-by-chapter lecture presentations, and classroom exercises and activities.

The past few decades have seen the increasing use of evidence in all aspects of healthcare. The concept of evidence-informed healthcare began in the 1990s as evidence-informed practice, and has since become widely accepted. It is also accepted that the training of medical

graduates must be informed by evidence obtained from educational research. This book utilizes an evidence-informed approach to improve discipline-based undergraduate medical curricula. Discipline-based undergraduate medical curricula represent a widely adopted choice for undergraduate medical education around the world. However, there have been criticisms leveled against the discipline-based approach. One of the shortcomings cited is that students are insufficiently equipped to meet the challenges of today's healthcare. As a result, various strategies have been proposed. One option, currently in vogue, is the outcome-based approach, wherein the exit behaviors of medical graduates are explicitly examined and used to guide the educational process. The shortcomings present in discipline-based undergraduate medical curricula can be overcome by the strengths of these strategies. This book recommends improving discipline-based undergraduate medical curricula by combining several strategies, including the adoption of an outcome-based approach and the use of evidence-informed implementable solutions. The book is relevant for all faculty, administrators and policymakers involved in undergraduate medical education, and can also be used as a resource for faculty development.

quantitative methods addresses the qualitative research methodologies that are often the starting point of research projects, particularly in magnet hospitals and DNP programs. Clear, comprehensive coverage is organized into five units that include: an introduction to nursing research; coverage of the research process; application for evidence-based health care; how to analyze data, determine outcomes, and disseminate research; and how to propose and seek funding for research. Strong emphasis on evidence-based practice addresses this key graduate-level QSEN competency and reinforces how to generate research evidence and appraise and synthesize existing research for application to clinical practice. Rich examples from nursing literature bring research principles to life. Emphasis on the most currently used research methodologies focuses on the methods used in both quantitative research and qualitative research, as well as outcomes research and mixed-methods research. Coverage of digital data collection examines the use of online research tools. The Creative Enterprise of Mathematics Teaching Research presents the results and methodology of work of the teaching-research community of practice of the Bronx (TR Team of the Bronx). It has a twofold aim of impacting both teachers of Mathematics and researchers in Mathematics Education. This volume can be used by teachers of mathematics who want to use research to reflect upon and to improve their teaching craft, as well as by researchers who are interested in uncovering riches of classroom learning/teaching for research investigations. This book represents the results of a collaboration of instructors discussing their own instruction research, analyzed through a conceptual framework obtained via the synthesis of creativity research and educational learning theories, based upon the work of Piaget and Vygotsky. The editors see an urgent need for creative synthesis of research and teaching, an example of which is presented in the book. Two central themes of the book are the methodology of TR/NYCity model and creativity, more precisely,

creativity of the Aha moment formulated by Arthur Koestler (1964) in a very profound but little known theory of bisociation exposed in his work "The Act of Creation". Incorporation of the theory of bisociation into classroom teaching of mathematics provides the key to enable students who may struggle with mathematics to engage their own creativity, become involved in their learning process and thus reach their full potential of excellence. Creativity in teaching remedial mathematics is teaching gifted students how to access their own giftedness.

This book is the road map to proficiency and development in the field of qualitative research. Borrowing from a wealth of experience teaching introductory qualitative research courses, author Kakali Bhattacharya lays out a dynamic program for learning different paradigms of inquiry, empowering students to recognize the convergence of popular research methodologies as well as the nuances and complexities that set each of them apart. Her book: supplements the readings and activities in a qualitative methods class, exposing students to the research process and the dominant types of qualitative research;

introduces a variety of theoretical perspectives in qualitative research, including positivism and postpositivism, interpretivism, feminism, symbolic interactionism, phenomenology, hermeneutics, critical theory, and Critical Race Theory; identifies and summarizes the three dominant methodological approaches in qualitative research: narrative inquiry, grounded theory, and ethnography; provides interactive activities and exercises to help students crystallize their understanding of the different topics in each chapter.
