There's nothing Dru Sharma fears more than the dentist. So when his school runs a compulsory dental check, he convinces his identical twin, Kal, to take his spot. What Dru and Kal don't realise is that the check-up has been initiated by the Infinity Group, a mysterious organisation that is interested in a lot more than the students' dental health. Infinity wants to control the hearts, minds and bodies of every young person in the world, and it isn't long before Kal and the other students start developing super strength, while the kids who resisted the procedure start to go missing. With Dru 'Unlisted' and outside of Infinity Group's control, it's a race against time to uncover the truth of the operation. Updated 12/17/2020: In an international security environment described as one of renewed great power competition, the South China Sea (SCS) has emerged as an arena of U.S.-China strategic competition. U.S.-China strategic competition in the SCS forms an element of the Trump Administration's more confrontational overall approach toward China, and of the Administration's efforts for promoting its construct for the Indo-Pacific region, called the Free and Open Indo-Pacific (FOIP). China's actions in the SCS in recent years--including extensive island-building and base construction activities at sites that it occupies in the Spratly Islands, as well as actions by its maritime forces to assert China's claims against competing claims by regional neighbors such as the Philippines and Vietnam--have heightened concerns among U.S. observers that China is gaining effective control of the SCS, an area of strategic, political, and economic importance to the United States and its allies and partners. Actions by China's maritime forces at the Japan administered Senkaku Islands in the East China Sea (ECS) are another concern for U.S. observers. Chinese domination of China's near-seas region--meaning the SCS and ECS, along with the Yellow Sea--could substantially affect U.S. strategic, political, and economic interests in the Indo-Pacific region and elsewhere. Potential general U.S. goals for U.S.-China strategic competition in the SCS and ECS include but are not necessarily limited to the following: fulfilling U.S. security commitments in the Western Pacific, including treaty commitments to Japan and the Philippines; maintaining and enhancing the U.S.-led security architecture in the Western Pacific, including U.S. security relationships with treaty allies and partner states; maintaining a regional balance of power favorable to the United States and its allies and partners; defending the principle of peaceful resolution of disputes and resisting the emergence of an alternative "might-makes-right" approach to international affairs; defending the principle of freedom of the seas, also sometimes called freedom of navigation; preventing China from becoming a regional hegemon in East Asia; and pursuing these goals as part of a larger U.S. strategy for competing strategically and managing relations with China.

Potential specific U.S. goals for U.S.-China strategic competition in the SCS and ECS include but are not necessarily limited to the following: dissuading China from carrying out additional base construction activities in the SCS, moving additional military personnel, equipment, and supplies to bases at sites that it occupies in the SCS, initiating island-building or base construction activities at Scarborough Shoal in the SCS, declaring straight baselines around land features it claims in the SCS, or declaring an air defense identification zone (ADIZ) over the SCS; and encouraging China to reduce or end operations by its maritime forces at the Senkaku Islands in the ECS, halt actions intended to put pressure against Philippine-occupied sites in the Spratly Islands, provide greater access by Philippine fishermen to waters surrounding Scarborough Shoal or in the Spratly Islands, adopt the U.S./Western definition regarding freedom of the seas, and accept and abide by the July 2016 tribunal award in the SCS arbitration case involving the Philippines and China. The Trump Administration has taken various actions for competing strategically with China in the SCS and ECS. The issue for Congress is whether the Trump Administration's strategy for competing strategically with China in the SCS and ECS is appropriate and correctly resourced, and whether Congress should approve, reject, or modify the strategy, the level of resources for implementing it, or both.

Brilliant. Colorful. Visionary. Tenacious. Witty. Since his appointment to the Supreme Court in 1986, Associate Justice Antonin Scalia has been described as all of these things and for good reason. He is perhaps the best-known justice on the Supreme Court today and certainly the most controversial. Yet most Americans have probably not read even one of his several hundred Supreme Court opinions. In Scalia Dissents, Kevin Ring, former counsel to the U.S. Senate's Constitution Subcommittee, lets Justice Scalia speak for himself. This volume—the first of its kind— showcases the quotable justice's take on many of today's most contentious constitutional debates. Scalia Dissents contains over a dozen of the justice's most compelling and controversial opinions. Ring also provides helpful background on the opinions and a primer on Justice Scalia's judicial philosophy. Scalia Dissents is the perfect book for readers who love scintillating prose and penetrating insight on the most important constitutional issues of our time.

This book does not present a single philosophical approach to taxation and ethics, but instead demonstrates the divergence in opinions and approaches using a framework consisting of three broad categories: tax policy and design of tax law; ethical standards for tax advisors and taxpayers; and tax law enforcement. In turn, the book addresses a number of moral questions in connection with taxes, concerning such topics as: • the nature of government • the relation between government (the state) and its subjects or citizens • the moral justification of taxes • the link between property and taxation • tax planning, evasion and avoidance • corporate social responsibility • the use of coercive power in collecting taxes and enforcing tax laws • ethical standards for tax advisors • tax payer rights • the balance between individual rights to liberty and privacy, and government compliance and information requirements • the moral justification underlying the efforts of legislators and policymakers to restructure society and steer individual and corporate behavior.

The authoritative reference on NEURON, the simulation environment for modeling biological neurons and neural networks that enjoys wide use in the experimental and computational neuroscience communities. This book shows how to use NEURON to construct and apply empirically based models. Written primarily for neuroscience investigators, teachers, and students, it assumes no previous knowledge of computer programming or numerical methods. Readers with a background in the physical sciences or mathematics, who have some knowledge about brain cells and circuits and are interested in computational modeling, will also find it helpful. The NEURON Book covers material that ranges from the inner workings of this program, to practical considerations involved in specifying the anatomical and biophysical properties that are to be represented in models. It uses a problem-solving approach, with many working examples that readers can try for themselves.

From 1914 to 1934 the US government sent Native American girls to work as domestic servants in the homes of white families. Matrons and Maids tells this forgotten history through the eyes of the women who facilitated their placements. During those two decades, Outing matrons oversaw and managed the employment of young Indian women. In Tucson, Arizona, the matrons acted as intermediaries between the Indian and white communities and between the local Tucson community and the national administration, the Office of Indian Affairs. Based on federal archival records, Matrons and Maids offers an original and detailed account of government practices and efforts to regulate American Indian women. Haskins demonstrates that the outing system was clearly about regulating cross-cultural interactions, and she highlights the roles played by white women in this history. As she compellingly argues, we cannot fully engage with cross-cultural histories without examining the complex involvement of white women as active, if ambivalent, agents of colonization. Including stories of the entwined experiences of Indigenous and non-Indigenous women that range from the heart-warming to the heart-breaking, Matrons and Maids presents a unique perspective on the history of Indian policy and the significance of women's work.

"Actor Training in Anglophone Countries offers a firsthand account of the most significant acting programs in English-speaking countries throughout the world. The culmination of archival research and fieldwork spanning six years, it is the only work of its kind in the history of actor training from an international perspective. It presents the current moment as crucial for student actors and those that teach them. As the profession continues to change, new and progressive approaches to training have become as urgent as ever. Using drama schools and universities as its subjects of inquiry, this book investigates acting programs in the United Kingdom, Ireland, the US, Canada, Australia, and New Zealand. Among the case studies are the Royal Academy of Dramatic Art, National Theatre School of Canada, Western Australian Academy of Performing Arts, and Carnegie Mellon University. All recognized for their distinguished reputations by industry professionals and acting teachers alike, the book examines each program's pedagogical approach, administrative funding apparatus, and alumni success. In doing so, it identifies the challenges facing acting schools today and offers a new direction for training in the twenty-first century. This book will be of interest of theatre and performance scholars, artists, students, and teachers. With English becoming the world's foremost lingua franca, the pressure to improve English language education (ELE) has been steadily increasing. Consequently, the nature of ELE has changed drastically in the last decade. This has not only brought about a re-evaluation of the way English is taught and learnt, but it has also led to various innovative practices around the world. As a result, this edited book aims to shed light on the new theoretical and methodological developments in the field of ELE as well as the many difficulties faced by practitioners in different parts of the globe. One very important variable that the book takes into account is the role that English already plays in a particular society since this may affect the views that teachers and students hold of the language and how it can significantly influence the way English is taught and learnt in given political, economic and socio-cultural settings. The purpose of this book is therefore to provide a comprehensive overview of the pedagogical methods, policies and problems that underlie English language education in ten different regions across the world, including: the USA, Canada, the UK, Australia, New Zealand, India, Singapore, Japan, China and Hong Kong. In doing so, the different chapters in the book emphasize the importance of responding to linguistic and cultural diversity in order to develop English language education in a globalized world. This book will be useful for teachers and students of English language, for English language curriculum and materials developers, and for those involved in educational policy-making and research. Written by experts in the field, the range of content covered in the book's chapters will also help policy-makers, researchers and practitioners develop effective English language education practices and policies, and propose solutions to current problems. English language teaching and learning in different environments around the world. The newly-developed arguments and concerns pertaining to English language education will serve as future reference for professionals interested in this area of expertise.
