V Reader User Manual

In 1957, Richard Altick's groundbreaking work The English Common Reader transformed the study of book history. Inspired by Altick's research, but digging deep into the neglected records of prison libraries, army barracks or convict ships the authors of A Return to the Common Reader dramatically reconfigure our understanding of the ordinary Victorian readers whose efforts and choices changed our literary culture forever.

A Reader in International Corporate Finance offers an overview of current thinking on six topics: law and finance, corporate governance, banking, capital markets, capital structure and financing constraints, and the political economy of finance. This collection of 23 of the most influential articles published in the period 2000-2006 reflects two new trends:interest in international aspects of corporate finance, particularly specific to emerging markets, awareness of the importance of institutions in explaining global differences in corporate finance."In the last decade, financial economis.

The Nature of History Reader

Effectiveness of Alternative Skid Reduction Measures - Volume III: Users Manual. Final Report

The question of what the nature of history is, is now a key issue for all students of history. It is now recognised by many that the past and history are different phenomena and that the way the past is actively historicised can be highly problematic and contested. Older metaphysical, ontological, epistemological, methodological and ethical assumptions can no longer be taken as read. In this timely collection, key pieces of writing by leading historians are reproduced and evaluated, with an explanation and critique of their character and assumptions, and how they reflect upon the nature of the history project. The authors respond to the view that the nature of history has become so disparate in assumption, approach and practice as to require an informed guide that is both self-reflexive, engaged, critical and innovative. This work seeks to aid a positive re-thinking of history today, and will be of use both to students and to their teachers.

This volume contains the proceedings of the 8th Conference on Foundations of Software Technology and Theoretical Computer Science held in Pune, India, on December 21-23, 1988. This internationally well-established Indian conference series provides a forum for actively investigating the interface between theory and practice of Software Science. It also gives an annual occasion for interaction between active research communities in India and abroad. Besides attractive invited papers the volume contains carefully reviewed submitted papers on the following topics: Automata and Formal Languages, Graph Algorithms and Geometric Algorithms, Distributed Computing, Parallel Algorithms, Database Theory, Logic Programming, Programming Methodology, Theory of Algorithms, Semantics and Complexity.

Linguistically annotated corpora are becoming a central part of the corpus linguistics field. One of their main strengths is the level of searchability they offer, but with the annotation come problems of the initial complexity of queries and query tools. This book gives a full, pedagogic account of this burgeoning field. Beginning with an overview of corpus linguistics, its prerequisites and goals, the book then introduces linguistically annotated corpora. It explores the different levels of linguistic annotation, including morphological, parts of speech, syntactic, semantic and discourse-level, as well as advantages and challenges for such annotations. It covers the main annotated corpora for English, the Penn Treebank, the International Corpus of English, and OntoNotes, as well as a wide range of corpora for other languages. In its third part, search strategies required for different types of data are explored. All chapters are accompanied by exercises and by sections on further reading.

A sourcebook of historical written texts, video documentation, and working programs that form the foundation of new media. This reader collects the texts, videos, and computer programs—many of them now almost impossible to find—that chronicle the history and form the foundation of the still-emerging field of new media. General introductions by Janet Murray and Lev Manovich, along with short introductions to each of the texts, place the works in their historical context and explain their significance. The texts were originally published between World War II—when digital computing, cybernetic feedback, and early notions of hypertext and the Internet first appeared—and the emergence of the World Wide Web—when they entered the mainstream of public life. The texts are by computer scientists, artists, architects, literary writers, interface designers, cultural critics, and individuals working across disciplines. The contributors include (chronologically) Jorge Luis Borges, Vannevar Bush, Alan Turing, Ivan Sutherland, William S. Burroughs, Ted Nelson, Italo Calvino, Marshall McLuhan, Jean Baudrillard, Nicholas Negroponte, Alan Kay, Bill Viola, Sherry Turkle, Richard Stallman, Brenda Laurel, Langdon Winner, Robert Coover, and Tim Berners-Lee. The CD accompanying the book contains examples of early games, digital art, independent literary efforts, software created at universities, and home-computer commercial software. Also on the CD is digitized video, documenting new media programs and artwork for which no operational version exists. One example is a video record of Douglas Engelbart's first presentation of the mouse, word processor, hyperlink, computer-supported cooperative work, video conferencing, and the dividing up of the screen we now call non-overlapping windows; another is documentation of Lynn Hershman's Lorna, the first interactive video art installation.

The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government.

Rex Feral kills for hire. Some consider him a criminal. Others think him a hero. In truth, he is a lethal weapon aimed at those he hunts. He is a last recourse in these times when laws are so twisted that justice goes unserved. He is a man who feels no twinge of guilt at doing his job. He is a professional killer. Learn how a pro gets assignments, creates a false identity, maizes a disposable silencer, leaves the scene without a trace, watches his mark unobserved and more. Feral reveals how to get in, do the job and get out without getting caught.

An entirely new approach to reading, understanding, and enjoying Native American fiction This book has been written with the narrow conviction that if Native American literature is worth thinking about at all, it is worth thinking about as literature. The vast majority of thought that has been poured out onto Native American literature has puddled, for the most part, on how the texts are positioned in relation to history or culture. Rather than create a comprehensive cultural and historical genealogy for Native American literature, David Treuer investigates a selection of the most important Native American novels and, with a novelist's eye and a critic's mind, examines the intricate process of understanding literature on its own terms. Native American Fiction: A User's Manual is speculative, witty, engaging, and written for the inquisitive reader. These essays—on Sherman Alexie, Forrest Carter, James Fenimore Cooper, Louise Erdrich, Leslie Marmon Silko, and James Welch—are rallying cries for the need to read literature as literature and, ultimately, reassert the importance and primacy of the word.

This book provides an overview of the practical aspects of diffusion tensor imaging (DTI), from understanding the basis of the technique through selection of the right protocols, trouble-shooting data quality, and analyzing DTI data optimally. DTI is a non-invasive magnetic resonance imaging (MRI) technique for visualizing and quantifying tissue microstructure based on diffusion. The book discusses the theoretical background underlying DTI and advanced techniques based on higher-order models and multi-shell diffusion imaging. It covers the practical implementation of DTI; derivation of information from DTI data; and a range of clinical applications, including neurosurgical planning and the assessment of brain tumors. Its practical utility is enhanced by decision schemes and a fully annotated DTI brain atlas, including color fractional anisotropy maps and 3D tractography reconstructions of major white matter fiber bundles.

Featuring contributions from leading specialists in the field of DTI, Diffusion Tensor Imaging: A Practical Handbook is a valuable resource for radiologists, neuroradiologists, MRI technicians and clinicians.

1972: January-June

World Literature is an increasingly influential subject in literary studies, which has led to the re-framing of contemporary ideas of 'national literatures', language and translation. World Literature: A Reader brings together thirty essential readings which display the theoretical foundations of the subject, as well as showing its conceptual development over a two hundred year period. The book features: an illuminating introduction

to the subject, with suggested reading paths to help readers navigate through the materials texts exploring key themes such as globalization, cosmopolitanism, post/trans-nationalism, and translation and nationalism writings by major figures including J. W. Goethe, Karl Marx, Friedrich Engels, Longxi Zhao, David Damrosch, Gayatri Chakravorty Spivak, Pascale Casanova and Milan Kundera. The early explorations of the meaning of 'Weltliteratur' are introduced, while twenty-first century interpretations by leading scholars today show the latest critical developments in the field. The editors offer readers the ideal introduction to the theories and debates surrounding the impact of this crucial area on the modern literary landscape.

This handbook includes a CD-ROM containing spreadsheet templates and other information that can be used to develop an inspection program for pressure vessels, piping and other equipment in a power plant or other industrial facility. The Handbook and the templates will help the user to develop an inspection program by: Framing and inquiry Collecting and formatting the relevant data Analyzing the data Obtaining failure probability vs. time and other useful information Performing system analysis when necessary Mathematically determining the correct sequence and timing for a series of major maintenance activities. The CD also includes an interactive flow chart that links to abbreviated versions of the step-by-step procedures. The Handbook identifies known areas where safety exposures exist and suggests ways in which these exposures may be addressed.

A proliferation of lawsuits involving sport utility vehicles, defective tires, medical devices and drugs, and asbestos abounds. Public attention to products liability cases is at an all-time high, and awards routinely run into the millions of dollars. When developing a strategy in this high stakes world, attorneys can't afford to have anything other than the best information and insight into this evolving area of law. Lawyers need practical tools to assess a products liability case's potential and build their approach, and Shapo on the Law of Products Liability provides the tools to give you the winning edge. Through a holistic analysis of the law and its principal developments as witnessed in hundreds of cases, this treatise gives litigators a wide variety of perspectives on potential strategies, and the tools to support those strategies with persuasive arguments. This authoritative two-volume work will enable you to: Assess products liability case potential and build sound litigation strategies Dig deep into products liability law to build creative approaches to litigation Craft a winning case and reap the greatest reward for your clients Find the tools and information to support strategies with persuasive arguments Both federal and state courts contribute a rich mix of decisions to products liability law, which covers both consumer products and occupational hazards. This indispensable resource for the products liability practitioner helps you prepare your case. Is the product defective? Who is liable? What is the manufacturer's responsibility? Who can be sued? What kind of awards may be realized? How might this be defended? Shapo on the Law of Products Liability also includes coverage of: Asbestos litigation Chinese drywall Food and drug Medical devices Design/manufacturing defects claims Punitive damages Discovery rule Up to date analysis and commentary History and background on products liability law Damages Advertising material Packaging Marshall S. Shapo, the Frederic P. Vose Professor at Northwestern University School of Law, is a nationally recognized authority on torts and products liability law. "In the nineteenth century and still in the early decades of the twentieth century textbooks of economics were quite different from those over which thousands of undergrads sweat blood today to prepare their exams. They pedagogical tools, rich of moralistic overtones and of practical indications addressed to policy makers. They were made to persuade both students and the ordinary layman about the benefits of the market order. They also indicated the rules of behaviour that were considered consistent with the smooth functioning of economic mechanisms. The book studies the origins and evolution of economic textbooks in the nineteenth and early twentieth century, up to the turning point represented by Paul Samuelson's Economics (1948), which became the template for all the textbooks of the postwar period. The case studies included in the book cover a large part of Europe, the British Commonwealth, the United States and Japan. Each chapter examines various types of textbooks, from those aimed at self-education to those addressed to university students, secondary school students, to the short manuals aimed at the popularisation of political economy among workers and the middle classes. An introductory chapter examines this phenomenon in a comparative and transnational perspective. This study on the archaeology of modern textbooks reveals the massive effort made by governments and academic authorities to construct and disseminate a system of economic representations and regulations that could be instrumental to establish and consolidate what Michel Foucault called a new type of governmentality, based on natural market laws and on Malthusian population mechanisms"--
