Abraham Knerr was born ca. 1717 in Zweibrucken in the German Palatinate. He immigrated to Pennsylvania in 1741. Both he and his wife, Mary Eva (born 1713), are buried in Unionville, Pennsylvania. Valentin Alt immigrated to Pennsylvania from the Palatinate area of Germany. He eventually settled in York County, Pennsylvania in 1755 where he died. Includes Ness, Glattfelder, Canarr, Reeser, McCloud, Needham, Hunsicker, and related families.

Spacecraft takes a long look at humankind's attempts and advances in leaving Earth through incredible illustrations and authoritatively written profiles on Sputnik, the International Space Station, and

beyond. In 1957, the world looked on with both uncertainty and amazement as the Soviet Union launched Sputnik 1, the first man-made orbiter. Sputnik 1 would spend three months circling Earth every 98 minutes and covering 71 million miles in the process. The world's space programs have traveled far (literally and figuratively) since then, and the spacecraft they have developed and deployed represent almost unthinkable advances for such a relatively short period. This ambitiously illustrated aerospace history profiles and depicts spacecraft from Sputnik 1 through the International Space Station, and everything in between, including concepts that have yet to actually venture outside the Earth's

atmosphere. Illustrator and aerospace professional Giuseppe De Chiara teams up with aerospace historian Michael Gorn to present a huge, profusely illustrated, and authoritatively written collection of profiles depicting and describing the design, development, and deployment of these manned and unmanned spacecraft. Satellites, capsules, spaceplanes, rockets, and space stations are illustrated in multiple-view, sometimes cross-section, and in many cases shown in archival period photography to provide further historical context. Dividing the book by era, De Chiara and Gorn feature spacecraft not only from the United States and Soviet Union/Russia, but also from the European Space Agency

Systems approaches for agricultural development are needed to determine rational strategies for the role of agriculture in national development. Mathematical models and computer simulation provide objective tools for applying science to determine and evaluate options for resource management at field, farm and regional scales. However, these tools would not

Descendants

be fully utilizable without incorporating social and economic dimensions into their application. The second international symposium, Systems Approaches for Agricultural Development, held in Los Baños, 6-8 December 1995, fostered this link between the bio-physical sciences and the social sciences in the choice of keynote papers and oral presentations, a selection of which is included in this book. The book's contents further reflect how systems approaches have definitely moved beyond the research mode into the application mode. The large

number and high quality of interdisciplinary research projects reported from different parts of the globe, to determine land use options that will meet multiple goals and yet sustain natural resource bases, is a key indicator of this 'coming of age'. At the farm level, where trade-off decisions between processes and products (commodities) feature strongly, much progress is also evident in the development of systems-based tools for decision making. This book will be of particular interest to all agricultural scientists and planners, as well as students interested in

Embryonic stem cells are one of the key building blocks of the emerging multidisciplinary field of regenerative medicine, and discoveries and new technology related to embryonic stem cells are being made at an ever increasing rate. This book provides a snapshot of some of the research occurring across a wide range of areas related to embryonic stem cells, including new methods, tools and technologies; new understandings about the molecular biology and pluripotency of these cells; as well as new uses for and sources of embryonic stem cells. The book will serve as a valuable

It is equally true that the Reformation was inspired and defined by the Bible and that the Bible was reshaped by the intellectual, political, and cultural forces of the Reformation. In this book, a distinguished scholar--whose contributions to the field of religious studies have won him wide renown--explores this relationship, examining both the role of the Bible in the Reformation and the effect of the Reformation on the text of the Bible, Biblical studies, preaching and exegesis, and European culture in general. Jaroslav Pelikan begins by discussing the philological

Download Ebook Valentin Alt Four Generations Of Ault Descendants.

foundations of the "reformation" of the Biblical text, focusing on the revival of Greek and Hebrew language study and the important contributions to textual criticism by humanist scholars. He then examines the changing patterns of interpretation and communication of the Biblical text, the proliferation of vernacular versions of scripture and their impact on various national cultures, and the impact of the Reformation Bible on art, music, and literature of the period. The book is richly illustrated with examples of early printed editions of Bibles, commentaries, sermons, vernacular translations, and other works with Biblical themes, all of which are identified and discussed. The book

Pennsylvania in 1752 with his sister and several friends and cousins, and so began the story of an enduring German-American family. After some time in Frederick County, Maryland, and Washington County, Pennsylvania, the family, which became known as Dustman, took advantage of the settlement opportunities in the newly formed Connecticut Western Reserve of Ohio, joining the state's earliest pioneers. Johan Martin Dostmann died before that journey, but his surviving children and grandchildren made their mark in Ohio, particularly in Trumbull and Mahoning counties, where they prospered. Covering the first four generations of the Dustman family, this book will be a valuable

resource for the descendants of Johan Martin Dostmann.

Second Generation Cell and Gene-Based Therapies: Biological Advances, Clinical Outcomes, and Strategies for Capitalisation serves as the only volume to the market to bridge basic science, clinical therapy, technology development, and business in the field of cellular therapy/cytotherapy. After more than two decades of painstaking fundamental research, the concept of therapeutic cells (stem cells, genes, etc.), beyond the concept of vaccines, is reaching clinical trial, with mounting confidence in the safety and efficacy of these products. Nonetheless, numerous incremental technical advances

Download Ebook Valentin Alt Four Generations Of Ault Descendants

remain to be achieved. Thus, this volume highlights the possible R&D paths, which will ultimately facilitate clinical delivery of cutting edge curative products. The next waves of innovation are reviewed in depth for hematopoietic stem cells, mesenchymal stem cells, tissue engineering, CAR-T cells, and cells of the immune system, as well as for enabling technologies such as gene and genome editing. Additionally, deep dives in product fundamentals, history of science, pathobiology of diseases, scientific and technological bases, and financing and technology adoption constraints are taken to unravel what will shape the cytotherapy industry to the horizon 2025 and beyond. The

became critical to enterprise; recent studies shows that its led enterprises business such as SMEs to considerable investments, which many organizations over the world attempt to use innovative technologies such as IoT and AI, these technologies have potential on sustainable business models. In addition to that, innovation usage in business models led to significant benefits towards sustainability concept in SMEs marketplace. Furthermore, Sustainability objectives refers to corporate sustainability term, which integrate enterprise operations with

social, educational, environmental and economic benefits, as process of decision-making can impact during sustainability implications. This book focus on the implementation of smart technologies for growing business, the book includes research articles and expository papers on the applications of technology on Decision Making, Healthcare, Smart Universities, Advertising, E-marketing, Public Sector and Digital Government, FinTech, RegTech. Some researchers also discussed the role of smart technologies in the

current COVID-19 pandemic, whether in the health sector, education, and others. On all of these, the researchers discussed the impact of smart technologies on decision-making in those vital sectors of the economy.

This new volume of Current Topics in Developmental Biology covers endocrine gland development and disease, and with contributions from an international board of authors. The chapters provide a comprehensive set of reviews covering such topics as sex determination & gonadogenesis, hypothalamus, parathyroid and placenta.

Birdwatchers often come across bird names that include a person's name, either in the vernacular (English) name or latinised in the scientific nomenclature. Such names are properly called eponyms, and few people will not have been curious as to who some of these people were (or are). Names such as Darwin, Wallace, Audubon, Gould and (Gilbert) White are well known to most people. Keener birders will have yearned to see Pallas's Warbler, Hume's Owl, Swainson's Thrush, Steller's

Eider or Brünnich's Guillemot. But few people today will have even heard of Albertina's Myna, Barraband's Parrot, Guerin's Helmetcrest or Savigny's Eagle Owl. This extraordinary new work lists more than 4,000 eponymous names covering 10,000 genera, species and subspecies of birds. Every taxon with an eponymous vernacular or scientific name (whether in current usage or not) is listed, followed by a concise biography of the person concerned. These entries vary in length from a
