Essential oils extracted by the distillation or hydrodistillation of aromatic plants are a complex mixture of volatile compounds with several biological activities. Their efficacy as antimicrobial agents is related to the activity of several natural compounds belonging to different chemical families that can act both in synergy with each other and with other antibiotics. The antibiotic resistance detected among pathogens has been quickly increasing in recent years, and the control of some of these microorganisms is becoming a planetary emergency for human and animal health. The control of the microbial growth is a problem of great importance also for the food industry (food deterioration and shelf life extension) and for the world of cultural heritage (indoor and outdoor phenomena of biodeterioration). Essential oils can play an important role in this scenario, due their recognized broad-spectrum antimicrobial activity. Therefore, the main subject of this

Special Issue includes an essential oil-based approach to control microorganisms in areas such as human and veterinary medicine, entomology, food industry and agriculture. In addition, the chemical composition of essential oils from endemic and rare medicinal/aromatic plants, nanoformulations of essential oils, applications in human and veterinary medicine and its use as animal feeding supplements are topics covered in this Special Issue

The motor scooter, so familiar a sight on the streets of cities throughout the world, can trace its ancestry back to the early years of the Twentieth century, but it really came into its own after the Second World War. In Italy the Piaggio company launched the Vespa that quickly became a byword for quick, cheap and chic urban personal transport. The Lambretta soon followed, along with dozens of rival scooters from manufacturers all over Europe, North America and Japan, including some famous names as Ducati, Heinkel, Triumph, Puch, Honda and Harley-Davidson.

This book offers the hint for a new reflection on ancient textual transmission and editorial practices in Antiquity. In the first section, it retraces the first steps of the process of ancient writing and editing. The reader will discover how the book is both a material object and a metaphorical personification,

material or immaterial. The second section will focus on corpora of Greek texts, their formation, and their paratextual apparatus. Readers will explore various issues dealing with the mechanisms that are at the basis of the assembling of ancient Greek texts, but great attention will also be given to the role of ancient scholarly work. The third section shows how texts have two levels of authorship: the author of the text, and the scribe who copies the text. The scribe is not a medium, but plays a crucial role in changing the text. This section will focus on the protagonists of some interesting cases of textual transmission, but also on the books they manufactured or kept in the libraries, and on the words they engraved on stones. Therefore, the fresh voices of the contributors of this book, offer new perspectives on established research fields dealing with textual criticism.

In 1963, Dr. Martin Luther King Jr. articulated his dream, JFK was assassinated, and zip codes were first introduced to the US. The world was monumentally changing and changing fast. But in the eyes of future fantasy author Peter Beagle and his best friend Phil, it wasn't changing fast enough. For these two twenty-something beatnik Jews from the Bronx, change was something you chased after night and day across the country on the trembling seat of a motor scooter.

Sports-Related Concussions in Youth

Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of parallel airfoil-vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate that the trailing edge flap can be used to alleviate the impulsive loads experienced by the airfoil. For supercritical interactions, the results show the necessity of using a leading edge flap, rather than a trailing edge flap, to alleviate the interaction. Results for various time dependent flap motions and their effect on the predicted temporal sectional loads, differential pressures, and the free vortex trajectories are presented. For the OLS model rotor,

Get Free Vespa Lx 125 le Repair

contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s). Average reductions in the BVI noise levels on the order of 5 dB with moderate power penalties on the order of 18 pct. for a four bladed rotor and 58 pct. for a two bladed rotor were obtained. In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in

many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that

do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

The Pentose Phosphate Pathway aims to explore the pentose phosphate cycle and the practical techniques applied in its investigation. The main focus of the book is the pentose phosphate cycle in animals as well as microorganisms, and does not discuss the one related to photosynthesis. The book covers the formulation of the pathway, its types, and its alternative formulations; the preparation, processes, and analysis of the pathway; and the enzymes involved. Also covered in the book are the intermediates in intact cells and tissues; distribution of enzymes among different tissues and species; the operation, regulation, and overall control of the pathway; and the clinical, nutritional, and metabolic aspects of the pathway. The text is recommended for biologists and biochemists who would like to understand further the pentose phosphate pathway and the

processes related to it.

This book includes over 30 real-life, up-to-date, award-winning case studies in scientific fields such as biotechnology, biomedicine, high-tech engineering and information technology. The case studies are arranged in modules that track the typical life cycle of creating and growing a new venture, which presents a comprehensive picture of entrepreneurial activities. The text is written in a language and style that managers will appreciate.

The Localist: Think Independent, Buy Local, and Reclaim the American Dream is the story of one girl's journey from buy-local blogger to woman entrepreneur and indie-shop advocate. When Carrie Rollwagen decided to give up corporate shopping for a year and instead shop local-only, she knew that she'd have to learn how to shop local, that she'd discover new indie businesses, and that she'd need to makeover her shopping habits. What she didn't know is that she'd save money, discover how to connect with her community, and learn to love indie business more than the big box stores she'd bought from all her life. She also didn't know that, before her buy-local year was over, she'd be the owner of her own independent business, a community coffee shop and indie bookstore in Birmingham,

Alabama. In The Localist, we follow Carrie on her localist adventure as she embraces slow food, small business, the locavore movement, and many quirky indie shopkeepers and unique independent shops along the way. She tells the story of her year of blogging about buying local in Birmingham, Alabama, and she gives us an inside look at her experience as a new female entrepreneur opening a new neighborhood business: Church Street Coffee & Books, an independent bookshop and locally owned coffee shop. Part memoir, part manual on how to shop local, The Localist is pro-community, but it's not necessarily anti-corporate. Carrie doesn't attack all big business, but rather shows us what we create with our shopping dollars and helps us see new ways of making positive impact on our communities with our spending. Big box stores are convenient, but corporations are not people, and it's important that we shop local and support indie business to keep the scales balanced between Main Street and Corporate America. Carrie Rollwagen is a copywriter and independent business owner based in Birmingham, Alabama. The Localist: Think Independent, Buy Local, and Reclaim the American Dream, based on her year-long blog about choosing independent shops over big box stores, is her first book.

The most comprehensive and up-to-date catalogue of the Vespa ever compiled, featuring all the models and versions produced to date, listed year by year through a series of files illustrated with invaluable archive materials and accompanied by detailed technical information. Vespa is an overview unique in its completeness and wealth of data, a resource of particular interest to those who still ride Vespas today, to collectors and to all those who have a place in their heart for the Vespa. The celebrated scooter, born at Pontedera in the immediate post-war years inaugurated a new era of personal mobility, taking on diverse roles with the passing of the years: from a vehicle for out-of-town trips to a symbol of aggregations, from an emblem of freedom to a design icon, from the queen of calendars to a star of competition, without ever losing sight of its primary function, that of the "urban" vehicle par excellence. Over the course of the years, Piaggio has produced dozens of models, from the overtly utilitarian to the most sporting and through to the Vespa Elettrica of today.

Simulation in healthcare education has a long history, yet in many ways, we have been reinventing the wheel during the last 25 years. Historically, simulators have been much more than simple models, and we can still learn from aspects of simulation used hundreds of years ago. This book gives a narrative history of the development of simulators from the early 1700s to the middle of the 20th century when simulation in healthcare appeared to all but die out. It is organized around the development of simulation in different countries and includes at the end a guide to simulators in museums and private collections throughout the world. The aim is to increase understanding of simulation in the professional education of healthcare providers by exploring the historical context of simulators that were developed in the past, what they looked like, how they were used, and examples of simulator use that led to significant harm and an erosion of standards. The book is addressed to the healthcare simulation community and historians of medicine. The latter in particular will appreciate the identification and use of historic sources written in Latin, German, Italian, French, Polish and Spanish as well as English.

Perfect in its compactness, in its functionality, and in its widely imitated design, the Vespa scooter is not only a means of transport, but a true icon. In celebration of Vespa's 75th anniversary, Vespa: Style and Passion is the lavishly illustrated official history of the legendary scooters and the culture

they've inspired. Introduced by the Italian firm Piaggio in 1946 with the model 98, Vespa enjoyed quick success. The scooters' diminutive size and affordability were perfect for promoting postwar mobility. But as with most novel designs, it would also be highly imitated, destined for icon status. From Piaggio's origins to the first Vespa prototypes to today's forward-looking Elettrica model, Vespa: Style and Passion is the ultimate retrospective of this beloved brand. A rich selection of visuals includes dozens of studio images of the most significant models from throughout Vespa history--including classics like the 125, 150 GS, Super Sprint, Primavera, and Rally--as well as period advertisements, rare archival photographs, and images of Vespas in popular culture and motorsport. Mod culture, perhaps most responsible for spreading scooter culture, is also given its due with images of customized Vespas. Vespa: Style and Passion relates with elan and high design the endless evolution of a marque that has conquered six continents, with 19 million units sold. The Vespa is not simply a scooter, but the scooter, known and appreciated the world over--a rare example of a motor vehicle that survived crises and fashions, always remaining faithful to the original concept. This is the definitive story of that influence.

Now a venerable icon of Italian style, the internationally known quintessential scooter - the Vespa - was once a two-wheeled revolution, offering mobility to everyone. Today it has come to symbolize scootering status, style, and freedom. As Vespa reaches its 60s without showing a wrinkle, this book celebrates its decades of incomparable spirit. In glowing images and words, the book shows Vespa in its many guises—as the two-wheeled vehicle of the post-war economic boom; as the symbol of the forward-charging ideas of the 1960s; appearing in romantic films such as Roman Holiday; and promoted in delirious ads that claimed, “Whoever Vespas, eats apples.” Decades of period ads and famous calendars are included, as well as technical and production information on every model ever built, including rare prototypes and variants. Each model is detailed in over 30 categories, from engine specs to production facts. Filled with stunning color photos and illustrations, the book is itself a stylish tribute to the iconic vehicle it celebrates. Author Giorgio Sarti knows Vespa, and this book is a thorough and thoroughly enchanting tribute to the scooter as it has sped through history, meaning something new to each generation, and in the process making its unique mode of personal transport synonymous with freedom. Officially licensed and includes a foreword from Piaggio Group President Roberto Colaninno.
