You Are A Step Away From Discovering How You Can Start Making Your Very Own Facemasks To Keep Of Viruses And Bacteria And Ultimately Protect Yourself From Contracting Infectious Diseases! As the current pandemic keeps spreading around the world, more and more people are coming to the realization that if you are to protect yourself from contracting the virus and deal with the stigma that often comes with having only a few (infected people) wear facemasks, everyone has to put on a facemask. If we all carry ourselves as if we are already infected, we will limit the transmission rate and slow down the spread. And as you would expect, as more people demand facemasks, the prices shoot up and often times, facemasks are become go out of stock. What's more, most of the store bought facemasks are single use facemasks, which essentially means you have to have put on a new mask at least every day, if not every few hours. The costs can easily add up when you have to cycle through several masks every single day or week. What is the other option, you may wonder? Well, the other option is to make your own homemade facemasks that, You can use as

many times as you want You can wash whenever you want You can have one ready for use whenever you need it Can help you keep the cost of facemasks low especially since we may not know how long the pandemic may take to contain I know you may be wondering... Will a homemade facemask be as effective as the ones used in hospitals? How exactly can you make your own facemask - isn't that stuff that require too much knowhow and big pockets to create? Why should you bother having a facemask? What will you need to make facemasks and what are the different approaches that you can use to make facemasks? What skills will you need to have to create your own facemasks? If you have these and other related questions, keep reading. Here is a preview of what to expect in this book: The basics of facemasks, including how they work to keep off infectious diseases Reasons why each individual should design, make and wear their own cloth face mask to avoid contracting viruses How to prepare to make your own facemasks How to make the main fabric How to make a pocket for filtration in a face mask The proper way to fix and remove a face mask All about the efficacy of custom made mask and how to use facemask to prevent flu and fight virus How to keep yourself safe and healthy during the pandemic and how to prevent spreading of germs and viruses And much more Indeed; one of the keys to beating infectious diseases is putting on masks. Virus

The tragic coronavirus pandemic of 2020-2022 opened the world's eyes anew to the urgent need for a better understanding of microorganisms, whether viruses or bacteria, in order to develop best practices for reducing the risk of dangerous infections. Ideally, every household should have sufficient knowledge of how viruses and other kinds of microorganisms can damage human and animal health. Now, with exquisite timing, Prof Pieter Gouws at the Centre for Food Safety (CFS), in the Department of Food Science at Stellenbosch University, and food scientist Dr Michaela van den Honert, have collaborated on a scientific household guide for "living with

little monsters”, introducing the reader to an array of potentially harmful microorganisms. Nor have the authors neglected the bacteria which play a positive role, for example, in the human gut. They have gathered the latest scientific evidence for an extensive set of descriptions of specific microbes to watch out for and how best to minimise the risk of being infected by them. By so doing, they can empower ordinary consumers, along with their families, to live healthier, less risky, daily lives.

Germs are in the air and in our food, on door handles and dinner plates, in our bodies and on our pets. Germs like viruses and bacteria are everywhere. Some are harmless, but others can make you very sick. Viruses and bacteria can cause a range of illnesses and diseases, from the common cold to tuberculosis (TB). Viruses and bacteria are all around us, but many people—kids and adults—don't understand much about how germs can affect our health. What does a virus do to your body? How can people catch diseases from bacteria? How can you keep yourself safe from the diseases that some germs carry? As you read, you'll find answers to all of these questions and more!

Do you want to learn how to make a medical face mask by yourself using cheap and affordable materials in your home? If the answer is yes, then this guide contains everything you need to know about how to make your homemade face mask. An introduction to good and bad bacteria, the diseases they can cause, the viruses that can infect us, and the parasites that can feed on us.

Committee on Infectious Diseases of Mice and Rats, National Research Council This companion to Infectious Diseases of Mice and Rats makes practical information on rodent diseases readily accessible to researchers. This volume parallels the three parts of the main volume. Part I, Principles of Rodent Disease Prevention, briefly examines the requirements for maintaining pathogen-free rodents, factors in designing health surveillance programs, and other laboratory management issues. Part II, Disease Agents, is an easy-to-use reference section, listing diagnosis and control methods, the potential for interference with research, and other factors for disease agents ranging from adenoviruses to tapeworms. It covers bacteria, viruses, fungi and common ectoparasites, and endoparasites.

Part III, Diagnostic Indexes, presents alphabetical listings of clinical signs, pathology, and research complications and lists infectious agents that might be responsible for each.

The second edition of this concise and practical guide describes infections in geographical areas and provides information on disease risk, concomitant infections (such as co-prevalence of HIV and tuberculosis) and emerging bacterial, viral and parasitic infections in a given geographical area of the world. Geographic approach means that its the only book to guide the health care worker towards a diagnosis based on the location of symptoms and travel history by encouraging the question where have you been? New content covering MERS, Ebola, Zika, and infections transmitted during air and maritime travel Covers the major infectious disease outbreaks framed in their geographic setting such as H7N9 bird flu influenza, H1N1, Ebola, and Zika Outstanding international editor team with vast experience on various international infectious disease and as journal editors and key leaders in infection surveillance

The definitive guide to fighting coronaviruses, colds, flus, pandemics, and deadly diseases, from one of North America's leading public health authorities, now updated with a new introduction on protecting yourself and others from COVID-19.

Dr. Bonnie Henry, a leading epidemiologist (microbe hunter) and public health doctor at the forefront of the fight against the worldwide COVID-19 coronavirus outbreak, has spent the better part of the last three decades chasing bugs all over the world – from Ebola in Uganda to polio in Pakistan, SARS in Toronto, and the H1N1 influenza outbreak across North America. Now she offers three simple rules to live by: wash your hands, cover your mouth when you cough, and stay at home when you have a fever. From viruses to bacteria to parasites and fungi, Dr. Henry takes us on a tour through the halls of Microbes Inc., providing up-to-date and accurate information on everything from the bugs we breathe, to the bugs we eat and drink, the bugs in our backyard, and beyond. Urgent and informative, Soap and Water & Common Sense is the definitive guide to staying healthy in a germ-filled world.

Did you try to find hand sanitizers in stores, but you realized that they are increasingly expensive or worse, absent? Did you decide to make your own natural hand sanitizer but don't know how to start? Do not worry, discover how to do your own DIY hand sanitizer in just few steps! With the recent spread of Coronavirus (COVID-19), all the attention is focused on the shields we have to protect ourselves: one of these shields is to pay attention to our personal hygiene: so, let's keep our hands clean! The WHO (World Health Organization) recommends washing hands for at least 20 seconds multiple times a day, but in facts, this isn't always possible: for instance, when you are traveling or when you're going to work or even taking the metro or the train, you cannot wash your hands every few minutes; that's when a hand sanitizer becomes your best friend!

Unfortunately, hand sanitizer gel is becoming increasingly expensive because of the pandemic currently spreading all over the world. Therefore, many people have decided to do that themselves. Making your own hand sanitizer is a simple process that results in a formula you can customize to suit your personal tastes. But be careful: not all hand sanitizers are able to protect you from germs, bacteria and viruses! The WHO recommends that a useful and virucide hand sanitizer must contain at least 60% alcohol for maximum efficacy, and if you're reading this you already know that right now, they are sold at 10 or even 20 times their normal price. So, in this Guide you can easily learn How to Make the Most Effective Natural Homemade Hand Sanitizer to Eliminate Viruses and Bacteria! In this Guide, you'll find: How to make the only DIY hand sanitizer accredited by WHO even if you are unexperienced. Why using a hand sanitizer is better than a normal hand wash. Different recipes to make easily your own hand sanitizer. No specific knowledge is required! The best tips and tricks to use more effectively hand sanitizers in order to prevent diseases. When it is absolutely necessary to use a hand sanitizer. And much, much more! If you already tried different hand sanitizer recipes online with no results, this practical Guide will give you the right informations to prepare the only DIY hand sanitizer accredited by WHO! The best cure is prevention! What are you waiting for? Pick up your own copy today by clicking the BUY NOW button at the top of the page!

This stunningly illustrated book provides a rare window into the amazing, varied, and often beautiful world of viruses. Contrary to popular belief, not all viruses are bad for you. In fact, several are beneficial to their hosts, and many are crucial to the health of our planet. Virus offers an unprecedented look at

101 incredible microbes that infect all branches of life on Earth—from humans and other animals to insects, plants, fungi, and bacteria. Featuring hundreds of breathtaking color images throughout, this guide begins with a lively and informative introduction to virology. Here readers can learn about the history of this unique science, how viruses are named, how their genes work, how they copy and package themselves, how they interact with their hosts, how immune systems counteract viruses, and how viruses travel from host to host. The concise entries that follow highlight important or interesting facts about each virus. Learn about the geographic origins of dengue and why old tires and unused pots help the virus to spread. Read about Ebola, Zika, West Nile, Frog virus 3, the Tulip breaking virus, and many others—how they were discovered, what their hosts are, how they are transmitted, whether or not there is a vaccine, and much more. Each entry is easy to read and includes a graphic of the virus, and nearly every entry features a colorized image of the virus as seen through the microscope. Written by a leading authority, this handsomely illustrated guide reveals the unseen wonders of the microbial world. It will give you an entirely new appreciation for viruses.

Make Your Own Hand Sanitizer with These Crafty and Practical Handmade Recipes! Are you concerned about your health and hygiene? Do you want to learn how to make your very own hand sanitizer? NOW IS THE TIME! USE THIS PRACTICAL GUIDE FOR HAND SANITIZERS IN 2020 AND MAKE YOUR OWN TODAY! Good hygiene is a cornerstone of health. Our hands, in particular, are exposed to many bacteria and viruses. Washing your hands with soap and water is very effective, but doesn't get the whole job done.

There is a myth about hand sanitizers, that they're not as effective as handwashing with soap. Wrong. While soap and water will remove all visible dirt from your hands, there are all kinds of different bacteria that are resistant to soap. Alcohol-based hand disinfection is the best option for killing bacteria and other unwanted microorganisms. For a hand sanitizer to be effective, it has to contain at least 60% alcohol. In addition to being more effective, alcohol-based sanitizers are also gentler on the hands. If you've washed your hands twenty times in a day, you might notice your skin is getting rough! This book will teach you: The real reason why handwashing is so important for health How does hand sanitizer work and why it's better than soap Simple recipes to make hand sanitizers at home The 3 secret ingredients of a successful hand sanitizer A no-brainer guide to using hand sanitizer properly You must be wondering: do hand sanitizers really work? Are they safe? Yes, they are safe! Especially if made at home, where you know what goes in. And do they work? Hand sanitizers can never replace handwashing, but they are a super important supplement to soap and water. Using both ways, you'll make sure that all the dirt, bacteria and viruses are safely removed from your hands! Ready to Make Some Sanitizer? Are You Tired of Getting Sick all the Time? If so, it's not your fault. Most often,

your body is fighting an invisible enemy that is trying to kill you. That's why you get sick all the time. In fact, you probably get sick more than you do anything else. When you get sick, your body is trying to give you what it thinks is the best chance it has to fight off the "bad guy" (virus or bacteria). But the truth is, when your body is fighting an infection, it is actually creating antibodies that are literally "starving" the germs/viruses for nutrients. That's why many people who get a flu shot every year almost never get the flu. Instead, they get a mild cold that lasts a few days. That's because their bodies are busy creating those "starving" antibodies. What if you could make it easier on your Immune System? This is an immune system defense guidebook about how to boost your body's natural defenses. It contains information you may not have considered before, and shows you how to improve your energy levels, reduce stress, get a better night's sleep, disease fighting capability, vitality and longevity. But I have more to share with you. Did you know a healthy immune system is the body's primary defense against disease and infection? It is also the body's primary defense against cancer. Your immune system is made up of many different types of white blood cells. Each type is specially designed to fight a certain type of disease or infection. There are T-Cells which battle bacteria and viruses. B-Cells which attack foreign proteins (bodies created by bacteria or viruses that have invaded your body and is making you sick). And finally, there are antibodies which seek out and destroy the foreign invaders. Antibodies are like police officers sent in to destroy viruses. Why Should You Take Boosting of Your Immune System Seriously? A weakened or exhausted immune system defense makes you more vulnerable to illness and disease Help protect your body against harmful viruses and bacteria that cause colds, the flu and other illnesses. Help support a healthy weight so you don't put extra stress on your heart and circulatory system. Help increase your energy levels throughout the day. Help improve your memory and focus. Help cleanse your lymphatic system. Help keep your skin healthy and toxin-free. A properly nourished, strong immune system gives you the best chance of staying healthy and fighting off infections The foods you eat have a direct effect on the strength and activity of your immune system An unhealthy immune system can lead to chronic fatigue, depression, weight gain, and many other health problems When you have a strong immune system, you have the energy to fight off colds and the flu Your white blood cells, antibodies, and phagocytes (specialized cells that ingest and destroy unwanted invaders) work better, which means they attack cancer cells, HIV, and other diseases Your body makes antibody "swipe files" that contain information on what it has previously encountered. If you come across a microbe or virus you have never before seen, your immune system will create a "virtual" immunity to it. Your immune system is able to distinguish between "friend" and "foe". This means that if you are fighting an infection, your body treats the invader as a threat, and works to get rid of it. ...and more! This immune system booster book suitable for kids and adults is the body's defense against viruses, bacteria, fungi (mold), and certain types of

cancer. It works in conjunction with your nervous system, your lymphatic system, and your cardiovascular system. Basically, it's everything working together to keep you healthy. When your defenses are strong, you are less likely to fall prey to viruses, bacteria, etc.
