This new Beginner Book about manic skiing squirrels—by J. Hamilton Ray with illustrations by Pascal Lemaitre—has the feeling of an old classic read-aloud. "Nobody knew how the mania grew. First there was one, and then there were two. Three more came gliding from under the trees. LOOK! On the hill. Those are squirrels on skis! Below lay the town, snow-covered and still. Not a sound could be heard. All was silent, until . . . Swwwishhhh swooped the skiers, all dressed for play. Eighty-five squirrels and more on the way!" As you can imagine, the townsfolk are NOT amused. Can intrepid reporter Sally Sue Breeze find out where the squirrels are getting their skis-and make them stop skiing long enough to eat lunch-before pest-control guy Stanley Powers sucks them up in his vacuum device? (Don't worry—Sally triumphs in a most unexpected way.) With delightfully understated, funny illustrations by Pascal Lemaitre, this is the perfect book for beginning readers to curl up and chill out with on a snow day—or any day! Originally created by Dr. Seuss, Beginner Books encourage children to read all by themselves, with simple words and illustrations that give clues to their meaning.

Most of the GNU Emacs text editor is written in the programming language called Emacs Lisp. You can write new code in Emacs Lisp and install it as an extension to the editor. However, Emacs Lisp is more than a mere "extension language"; it is a programming language in its own right. You can use it as you would any other programming language. Because Emacs Lisp is designed for use in an editor, it has special features for scanning and parsing text as well as features for handling file operations, displays, subprocesses, and so on. Emacs Lisp is closely integrated with the editing facilities; thus, editing commands that can also conveniently be called from Lisp programs, and parameters for customization are ordinary Lisp variables. This manual attempts to be a full description of Emacs Lisp. For a beginner's introduction to Emacs Lisp, see An Introduction to Emacs Lisp Programming, by Bob Chassell, also published by the Free Software Foundation. This manual presumes considerable familiarity with the use of Emacs for editing; see The GNU Emacs Manual for this basic information. Generally speaking, the earlier chapters describe features of Emacs Lisp that have counterparts in many programming languages, and later chapters describe features that are peculiar to Emacs Lisp or relate specifically to editing. This is the GNU Emacs Lisp Reference Manual, corresponding to version 24.5. As Emacs Lisp became such a big project over the years, we had to split this reference manual in two separate physical books. To keep it consistent with our digital manual, the references and page numbers cover both books as if it were one. Therefore please note that you probably want to have both parts.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science

to biology. Aristid Lindenmayer introduced language-theoretic models for developmental

biology in 1968. Since then the models have been customarily referred to as L systems.

Lindenmayer's invention turned out to be one of the most beautiful examples of

interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series).

As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via

the most basic class of L systems, namely, DOL systems. Here "O" stands for zero context

between developing cells. It has been a major typographical problem that printers are

unable to distinguish between O (zero) and O (oh). Thus, DOL was almost always printed

with "oh" rather than "zero", and also pronounced that way. However, this

misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could

be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this

suggestion. Some of them appear as contributors to this book. Of the many who could not

contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A.

Maurer whose influence in the theory of L systems has been most significant.

The constitution, properties, production and applications of lubricants and related

fluids of all states of aggregation are reviewed in this volume. Special attention is

devoted to synthetic lubricants and to additives for lubricants. Standards of quality are

listed, together with systems of classification and the most important specifications and

methods of testing the properties of lubricants and their performance in service. Future

trends in lubricants are also discussed. Non-conventional lubricants and additives are

examined in detail. The relationship between constitution and properties of lubricants,

e.g., the viscosity -temperature -pressure relationship, the behaviour in ageing, the

biodegradability, synergisms and antagonisms in the blends of lubricants, of additives

and lubricant-additive are analyzed. Guidelines for the selection of lubricants and

fluids in the design, service and maintenance of machines and machine parts are also

given. The work will be of interest to all those involved in the research and development

of petrochemical and machinery industries, as well as lecturers and students specializing

in this field.

Taryn Clark thought she'd outgrown the need to find her birth mother. She thought that a

successful career and a comfortable life in the city were enough to be happy. Did she

really need to know about the woman who had given her away? Adopted at birth, her first

few years were happy. It hadn't mattered that she didn't know her heritage; she had

parents who loved her and wanted her. But divorce, and then death, ripped their tiny

family apart, and at the tender age of six, she entered the foster care system. Over the

next dozen years, she shuffled from home to home. Finding her roots seemed an impossible

dream. But dreams are resilient. An unexpected discovery awakens old yearnings of

belonging to a family, of being part of something bigger than herself. Finding the brief,

ambiguous note from her birth mother is enough to unfurl the ribbons of hope still

binding her heart. Her quest takes her to Lancaster County, Pennsylvania and the heart of

the Plain community. Aided by her unique eye color, a healthy dose of luck, and the

private investigator she hires, Taryn finds her birth family easily enough, but finding

the truth is another matter. In all her musings, she never imagined a scenario where her

mother might be Amish. She never imagined that the fabric of her life might be a

patchwork of faith and fear, stitched together with a dark family secret. Taryn is determined to trace her roots, even if it means digging in the mud to do so. Now she's caught in the quicksand of a shocking discovery and the consequences of choices made, almost forty years ago. She'll risk everything to uncover the truth and to claim the family--and the roots--she so desperately craves.

Plato's Timaeus and the Biblical Creation Accounts argues that the creation of the world in Genesis 1 and the story of the first humans in Genesis 2-3 both draw directly on Plato's famous account of the origins of the universe, mortal life and evil containing equal parts science, theology and myth. This book is the first to systematically compare biblical, Ancient Near Eastern and Greek creation accounts and to show that Genesis 1-3 is heavily indebted to Plato's Timaeus and other cosmogonies by Greek natural philosophers. It argues that the idea of a monotheistic cosmic god was first introduced in Genesis 1 under the influence of Plato's philosophy, and that this cosmic Creator was originally distinct from the lesser terrestrial gods, including Yahweh, who appear elsewhere in Genesis. It shows the use of Plato's Critias, the sequel to Timaeus, in the stories about the Garden of Eden, the intermarriage of "the sons of God" and the daughters of men, and the biblical flood. This book confirms the late date and Hellenistic background of Genesis 1-11, drawing on Plato's writings and other Greek sources found at the Great Library of Alexandria. This study provides a fascinating approach to Genesis that will interest students and scholars in both biblical and classical studies, philosophy and creation narratives. .

The Second Edition of Food Process Engineering by Dr. Dennis Heldman, my former student, and co-author Paul Singh, his former student, attests to the importance of the previous edition. In the Foreword to the First Edition, I noted the need for people in all facets of the food processing industry to consider those variables of design of particular importance in engineering for the food processing field. In addition to recognizing the many variables involved in the biological food product being handled from production to consumption, the engineer must oftentimes adapt equations developed for non-biological materials. As more and more research is done, those equations are appropriately modified

to be more accurate or new equations are developed specifically for designing to process foods. This Edition updates equations used. This book serves a very important need in acquainting engineers and technologists, particularly those with a mathematics and physics background, with the information necessary to provide a more efficient design to accomplish the objectives. Of prime importance, at present and in the future, is to design for efficient use of energy. Now, it is often economical to put considerably more money into first costs for an efficient design than previously, when energy costs were a much smaller proportion of the total cost of process engineering.

How Cool Are Penguins is a book that will introduce young children to the world of penguins. It is written and illustrated in a fun and informative way that will entertain both the young and the young at heart.

I Will Survive is the story of Gloria Gaynor, America's "Queen of Disco." It is the story of riches and fame, despair, and finally salvation. Her meteoric rise to stardom in the mid-1970s was nothing short of phenomenal, and hits poured forth that pushed her to the top of the charts, including "Honey Bee," "I Got You Under My Skin," "Never Can Say Goodbye," and the song that has immortalized her, "I Will Survive," which became a #1 international gold seller. With that song, Gloria heralded the international rise of disco that became synonymous with a way of life in the fast lane - the sweaty bodies at Studio 54, the lines of cocaine, the indescribable feeling that you could always be at the top of your game and never come down. But down she came after her early stardom, and problems followed in the wake, including the death of her mother, whose love had anchored the young singer, as well as constant battles with weight, drugs, and alcohol. While her fans always imagined her to be rich, her personal finances collapsed due to poor management; and while many envied her, she felt completely empty inside. In the early 1980s, sustained by her marriage to music publisher Linwood Simon, Gloria took three years off and reflected upon her life. She visited churches and revisited her mother's old Bible. Discovering the world of gospel, she made a commitment to Christ that sustains her to this day.

This collection examines education in the light of a politics of becoming. It takes a non-hierarchical transdisciplinary approach, challenging the macropolitics of pre-established governmental and economic agendas for education. Drawing on the philosophy of Gilles Deleuze and Felix Guattari, the contributors consider questions such as how education might engage a politics of becoming, and how education and becoming function in a society of control. Since Deleuze and Guattari contend that a society is defined by its becomings, its transformations, this collection asks how education, itself a process in becoming, may contribute "collective creations" to a society in continual flux. The chapters bring theory and praxis together, deploying power, affect, cartography, space, relationality, assemblage and multiple literacies in order to experiment with music, art, language, teacher education, curriculum and policy studies. This collection is an innovative resource, creating an

encounter with the macropolitics of education, and altering teaching, learning, evaluation and curriculum. This book was originally published as a special issue of Discourse: Studies in the Cultural Politics of Education.

This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up. Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.
