In many recent democracies, candidates compete for office using illegal strategies to influence voters. In Hungary and Romania, local actors including mayors and bureaucrats offer access to social policy benefits to voters who offer to support their preferred candidates, and they threaten others with the loss of a range of policy and private benefits for voting the "wrong" way. These quid pro quo exchanges are often called clientelism. How can politicians and their accomplices get away with such illegal campaigning in

otherwise democratic, competitive elections? When do they rely on the worst forms of clientelism that involve threatening voters and manipulating public benefits? Conditionality and Coercion: Electoral Clientelism in Eastern Europe uses a mixed method approach to understand how illegal forms of campaigning including vote buying and electoral coercion persist in two democratic countries in the European Union. It argues that we must disaggregate clientelistic strategies based on whether they use public or

private resources, and whether they involve positive promises or negative threats and coercion. We document that the type of clientelistic strategies that candidates and brokers use varies systematically across localities based on their underlying social coalitions. We also show that voters assess and sanction different forms of clientelism in different ways. Voters glean information about politicians' personal characteristics and their policy preferences from the clientelistic

strategies these candidates deploy. Most voters judge candidates who use clientelism harshly. So how does clientelism, including its most odious coercive forms, persist in democratic systems? This book suggests that politicians can get away with clientelism by using forms of it that are in line with the policy preferences of constituencies whose votes they need. Clientelistic and programmatic strategies are not as distinct as previous have argued. Oxford Studies in Democratization is a series for

The 2013 annual conference of the Italian Society of Agricultural Economics (SIDEA) has been held in the attractive scenario of the city of Lecce under the organization of three different Universities of the Apulia Region (Università degli Studi di Bari, Università degli Studi di Foggia and Università del Salento). With such a topic, the SIDEA intended to cope with the challenges coming from a growing demand of food in a world where critical natural resources such as water, energy and land are becoming increasingly scarce and climate change is posing credible threats. The agri-food system and the broader bio-based economy are, in fact, human activities where the classic dimensions of sustainability (ecological, economic and social) are gaining a striking weight often showing evidence of

Humans have moved organisms around the world for centuries but it is only relatively recently that invasion ecology has grown into a mainstream research field. This book examines both the spread and impact dynamics of invasive species, placing the science of invasion biology on a new, more rigorous, theoretical footing, and proposing a concept of adaptive networks as the foundation for future

research. Biological invasions are considered not as simple actions of invaders and reactions of invaded ecosystems, but as co-evolving complex adaptive systems with emergent features of network complexity and invasibility. Invasion Dynamics focuses on the ecology of invasive species and their impacts in recipient social-ecological systems. It discusses not only key advances and challenges within the traditional domain of invasion ecology, but introduces approaches, concepts, and insights from many other disciplines such as complexity science, systems science, and ecology more broadly. It will

From the Preface: This manual, *Child Protective Services: A Guide for Caseworkers*, examines the roles and responsibilities of child protective services (CPS) workers, who are at the forefront of every community's child protection efforts. The manual describes the basic stages of the CPS process and the steps necessary to accomplish each stage: intake, initial assessment or investigation, family

assessment, case planning, service provision, evaluation of family progress, and case closure. Best practices and critical issues in casework practice are underscored throughout. The primary audience for this manual includes CPS caseworkers, supervisors, and administrators. State and local CPS agency trainers may use the manual for preservice or inservice training of CPS caseworkers, while schools of social work may add it to class reading lists to orient students to the field of child protection. In addition, other professionals and concerned community members may consult the manual for a

greater understanding of the child protection process. This manual builds on the information presented in *A Coordinated Response to Child Abuse and Neglect: The Foundation for Practice*. Readers are encouraged to begin with that manual as it addresses important information on which CPS practice is based-including definitions of child maltreatment, risk factors, consequences, and the Federal and State basis for intervention. Some manuals in the series also may be of interest in understanding the roles of other professional groups in responding to child abuse and neglect, including:

Throughout the world, traffic levels are increasing and, in urban areas, these increasing levels have led to pressures on the road networks which are causing serious economic, environmental and social problems. Applying such measures can result in a more efficient transport system, improved environmental conditions and improvements in safety as well as revenue generation for use on alternative transport systems. The editors conclude with a summary of findings within the book and suggestions for best future practice.

era of easy finance. Tax protests and growing welfare costs often led to rising debt levels. The change to floating exchange rates put more power in the hand of markets, which corresponded with a growing influence of neo-liberal thinking. These developments placed state finances under considerable pressure, and leading scholars here examine how the wealthiest OECD countries responded to these challenges and the consequences for the distribution of wealth between the rich and the poor. As the case studies here make clear, there was no simple 'race to the bottom' in taxation

This book addresses major issues facing postal and delivery services throughout the world. Worldwide, there is currently a considerable amount of interest in postal and delivery economics. The industry is reacting to a state of near crisis and is implementing different drastic changes. The European Commission and member States are still wrestling with the problem of how to implement entry liberalization into postal

markets, how to address digital competition, and how to maintain the universal service obligation (USO). The Postal Accountability and Enhancement Act of 2006 in the U.S. has perhaps created and exacerbated the problems faced by USPS. Digitalisation, technological development and online platforms are strongly affecting both the way postal and delivery operators are managing their services as well as their role on the market. Strong emphasis was attributed to the assets of Postal Operators (POs) and their added value in the digital age as well as on new business strategies. This volume

presents original essays by prominent researchers in the field, selected and edited from papers presented at this year's 26th Conference on Postal and Delivery Economics held in Split, Croatia, from May 30- June 2, 2018. This book will be a useful tool not only for graduate students and professors, but also for postal administrations, consulting firms, and federal government departments.

How Have Growth Regimes Evolved? Sustainability of the Agri-food System: Strategies and Performances

The concept of public action is a magnifying lens for shedding light on the plurality of institutional and social actors interacting in policies. Taking into account a changing social world that is redefining the State and its instruments, it is well suited for picking out transformations that have been affecting European social policies for some twenty years or so now: the territorial

reorganization of powers; the spread of a public-private mix in the provision of services; the rise of new forms of collaborative governance; the institutionalization of the European agenda on social investment. This book examines social policies as normative and cognitive devices that contribute to organizing social life and are themselves moulded and redefined by it. The perspective of public action is located where it is possible to observe how these devices come into action, the powers and interests they help mobilize and the dynamics they generate. Policies thus appear as a tangle of rather diverse processes in which the erosion of the "social" coexists

with the emergence of innovative forms of social organization. Public action is the key tool that helps to deal with this tangle by posing the following questions. What vocabularies, significances and practices are set in motion by the "social" today? What are the resources that fuel it? What powers are deployed in it?

The Routledge Handbook on Livelihoods in the Global South presents a unique, timely, comprehensive overview of livelihoods in low- and middle-income countries. of livelihoods reflects the complexity of strategies and practices used by individuals, households and communities to meet their needs and live their lives. The Handbook brings together insights and critical analysis from diverse approaches and experiences, learning from research and practice over the last 30 years. The Handbook comprises an introductory section on key concepts and frameworks, followed by five parts, on researching livelihoods, negotiating livelihoods, generating livelihoods, enabling livelihoods and contextualising livelihoods. The introduction provides readers with an appreciation of concepts researched and

Each part reflects the diversity of approaches taken to understanding livelihoods, whilst recognising commonalities, including the centrality of power in shaping, enabling and constraining livelihoods. The book also reflects diversity of context, including conflict, climate change and religion, as well as in generating livelihoods, through agriculture, small-scale mining and pastoralism. The aim of each chapter is to provide a critically informed introduction and overview of key concepts, issues and debates of relevance to the topic,

The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016.
