When Jake ran into the darkness, teeth bared, Brigitte's heart started pounding. The stray dog she had rescued the prior year was now ready to fight for her. This is the story of one woman, her dog, the danger and adventures they experienced together and the lessons that will shape her life. It is also an incredible journey inside the pain and hurdles that everyday can bring and the extraordinary dog that helped her through it all."A Wise Dog Named Jake" is a moving and uplifting story that will take you on a learning adventure where emotions run high. This book is not only for a reader who has rescued dogs, but for anyone who wants to be inspired in transforming a difficult experience into a growing phase of their life.

**Enjoy Your Dog**, written by Bailey the Golden Retriever, is meant to make you laugh, smile, and be happy. That's what Bailey does with so many people, every day, everywhere she goes. Bailey wants to share that with you and give you some ideas from our wonderful life to help you really enjoy your dog and life with them.

Shares the uplifting story of a Border Collie who recognized an unprecedented number of human words to explore her role in advancing understandings about animal intelligence, recounting how she also demonstrated an ability to use deductive reasoning and imitation.100,000 first printing.

"Dog lovers and neuroscientists should both read this important book." --Dr. Temple Grandin What is it like to be a dog? A bat? Or a dolphin? To find out, neuroscientist and bestselling author Gregory Berns and his team did something nobody had ever attempted: they trained dogs to go into an MRI scanner--completely awake--so they could figure out what they think and feel. And dogs were just the beginning. In What It's Like to Be a Dog, Berns takes us into the minds of wild animals: sea lions who can learn to dance, dolphins who can see with sound, and even the now extinct Tasmanian tiger. Berns's latest scientific breakthroughs prove definitively that animals have feelings very much like we do--a revelation that forces us to reconsider how we think about and treat animals. Written with insight, empathy, and humor, What It's Like to Be a Dog is the new manifesto for animal liberation of the twenty-first century.

*This is the first edited collection on veterinary applications of electroporation. Written by an international team of experts, this book presents worldwide emerging therapy options for cancer treatments in veterinary oncology practice. Electroporation offers a precision tool to target cancer cells without destroying surrounding tissue structures. The opening of tumor cell membranes facilitates local control of solid tumors either through the delivery of chemotherapeutics or by direct ablation of tissues using electric fields. In addition, transfer of gene-based products into the cancer cells can be used for genetic vaccination to achieve systemic responses and cancer control. Readers will discover valuable reference texts for practitioner education, including chapters on electrodes for unique anatomical access and treatment planning for deep-seated tumors, different immunotherapy applications with gene electrotransfer, calcium electroporation, irreversible electroporation applications and combinations with other common treatments such as surgery, radiation therapy and chemotherapy. Therapy options with electroporation are gaining interest around the world in both human and veterinary oncology, making this book valuable for oncologists, surgeons, primary care veterinarians, residents, interns and students at veterinary schools, where teaching of Electrochemotherapy will become part of the curriculum.*

*Various parallels have been drawn between wolves and humans from the perspective of their social organisation. Therefore, studying wolves may well shed light on the evolutionary origins of complex human cognition and, in particular, on the role that cooperation played in its development. Humans closely share their lives with millions of dogs - the domesticated form of wolves. Biologically, wolves and dogs can be considered to be the same species; yet only dogs are suitable living companions in human homes, highlighting the importance of cognitive and emotional differences between the two forms. The behaviour of wolves and dogs largely depends on the environment the animals grew up and live in. This book reviews more than 50 years of research on the differences and similarities of wolves and dogs. Beyond the socio-economy, the work explores different theories about when and how the domestication of wolves might have started and which behaviours and cognitive abilities might have changed during this process. Readers will discover how these fascinating animals live with their conspecifics in their social groups, how they approach and solve problems in their daily lives and how they see and interact with their human partners.*

*Boston Globe Bestseller A true story of acceptance, perseverance, and the possibility of love and redemption as evocative, charming, and powerful as the New York Times bestseller Following Atticus. Drawn by an online post, Tom Ryan adopted Will, a frightened, deaf, and mostly blind elderly dog, and brought him home to live with him and Atticus. The only owners Will ever knew had grown too fragile to take care of themselves, or of him. Ultimately, Will was left at a kill shelter in New Jersey. Tom hoped to give Will a place to die with dignity, amid the rustic beauty of his New Hampshire home. But when Will bites him numerous times and acts out in violent displays, Tom realizes he is in for a challenge. With endless patience and the kind of continued empathy Tom has nurtured in his relationship with Atticus, Will eventually begins to thrive. Soon, the angry, hurt, depressed, and near-death older dog has transformed into a happy, gambling companion with a puppy-like zeal for discovery. Will perseveres for two in a half years, inspiring hundreds of thousands of Tom and Atticus's fans with his courage, resilience, and unforgettable heart. A story of a dog and an indelible bond that is beautiful, heartbreaking, uplifting, and unforgettable, Will's Red Coat honors the promise held in all of us, at any stage of life. Will's Red Coat includes eight pages of color photographs.*

*An exploration of animal spirituality and the ability of animals to communicate with humans even in the afterlife • Chronicles the author's profound relationship with her dog, Brio, his ability to read her mind and emotions, and the messages she received from him after his death • Shares the author's research with animal communicators, psychics, and scientists specializing in animal intelligence such as Rupert Sheldrake • Explores animals' thoughts and feelings, interspecies communication and telepathy, animal souls and the afterlife, and animal reincarnation • Paper with French flaps Looking for companionship after a near-fatal car crash, Elena Jones, an award-winning television journalist and producer, decided to get her first dog. But what she found with her dog Brio shook the foundations of her physical and spiritual worlds, sending her on a quest to discover the nature of his spiritual origins and to contemplate and seek out the possibility of interspecies communication--even after death. Soon after bringing her puppy home, Mannes realized that the master-companion relationship would not be possible with Brio, who quickly showed that he had a mind--and a spirit--of his own. A healer Mannes visited immediately focused on Brio, exclaiming that he was an old soul. Mannes's growing curiosity about the intelligence, emotions, and consciousness of Brio and other dogs led her to contact an animal psychic in California who described, with amazing accuracy, Brio's favorite walks and the author's apartment from the dog's point of view. Motivated by her experience, Mannes produced a filmed segment with Diane Sawyer featuring the same psychic, who described Sawyer's country house and her dog's favorite spots in the yard. Mannes's skeptical journalist background compelled her to investigate further. She delved into the world of animal communicators, psychics, and scientists studying animal intelligence, including Rupert Sheldrake, to find answers to her multiplying questions: Do animals have thoughts and feelings? Consciousness? Souls? Is interspecies communication possible? Can animals reincarnate? Spanning the entire life and afterlife of Brio, including his last days and his messages to the author after he passed on, this book also explores Mannes' investigations into the spiritual life of animals, offering a new understanding of the unbreakable bond between humans and animals. Mannes invites readers to move beyond the owner-pet relationship and shows us how to see animals as thinking, feeling, spiritual beings whose connections with us extend far beyond life and death.*

Planning Australia's Healthy Built Environments shines a quintessentially Australian light on the links between land use planning and human health. A burgeoning body of empirical research demonstrates the ways urban structure and governance influences human health—and Australia is playing a pivotal role in developing understandings of the relationships between health and the built environment. This book takes a retrospective look at many of the challenges faced in pushing the healthy built environment agenda forward. It provides a clear and theoretically sound framework to inform this work into the future. With an emphasis on context and the pursuit of equity, Jennifer L. Kent and Susan Thompson supply specific ways to better incorporate idiosyncrasies of place and culture into urban planning interventions for health promotion. By chronicling the ways health and the environment can work together, Planning Australia's Healthy Built Environments enters into new theoretical and practical debates in this critically important area of research. This book will resonate with both health and built environment scholars and practitioners working to create sustainable and health-supportive urban environments.

A dog looking for a home sends letters to prospective owners on ButterNet Street, with surprising results in this heart-tugging dog adoption story told through letters Full color.

Think you don't have time to really get to know your shelter dog? Using the steps in Zen Buddhism as a starting-off point, this book offers insights, practical tips, and exercises you can use to bond with your adopted dog and achieve a more relaxed and enjoyable life together. While feeding, walking, and occasionally petting your dog is a good start, no matter how busy you are, you will be able to better connect with your dog by trying the suggestions in this book. With entertaining stories about the author's particularly idiosyncratic dog and the trials and tribulations that others have had with their rescue dogs, the author shows that owners of an adopted dog can peacefully coexist with their pets. Observations and advice from animal experts at rescue organizations, vets, and experienced dog owners also provide insight about how to better succeed at understanding your adopted dog. Readers will also discover why adopted dogs are often best suited to rehabilitating humans in need. If you have a rescue dog or are thinking about adopting one, and are looking for ways to help the two of you have a more peaceful existence together, this book is for you.

This book draws upon domestication science to undertake a radical reappraisal of the jurisprudence of property and intellectual property. Bringing together animal studies and legal philosophy, it articulates a critique of dominant property models and relationships from the perspective of cognitive ethology, domestication science and animal behaviour. In doing so, a radical new picture of property emerges. Focusing on the emergence of property models through prevailing ideas of human domestication and settlement, the book challenges the anthropocentricist that informs standard approaches to ownership and to authorship. Utilising a wide range of examples from ethology and animal studies, the book thus rethinks the very nature of property as uniquely human. This highly original contribution to the fields of property and intellectual property will appeal not only to legal scholars in these areas, as well as in animal law, but also to legal theorists and others working in the social sciences with interests in posthumanism and animal studies.

*After centuries of searching, Mouse now has everything she's ever wanted within her reach--a normal life, a lover, a brother. What will she risk to keep them? Cherished by a Father, coveted by a king, loved by an almost-priest; tormented by demons, tortured by a madman, hunted by a cult, hounded by her father. Mouse has survived it all. But then, she was never just a girl. Despite Mouse's power, her father always wanted a son--and now, at long last, he has him. And Mouse has a brother, someone else in the world just like her. Though she's never met him, the hope of what they might mean for each other tugs at her soul, even as it terrifies her. Lower Angelo, Hider among the Martyr in the Isolation of the Australian outback near the edges of Lake Disappointment, Mouse and Angelo have seemingly evaded at least one of the predators hunting them. Carefully dropping bogus breadcrumbs across Europe, they misdirect the Hovus Rishi, a nameless cult that wants Mouse as the ultimate weapon in their battle against evil. But when unnerving dreams start to plague Angelo, and the ancient beings of the Martyr's Dreaming send prophetic warnings that include visions of Mouse at her father's side, the two lovers realize it's time to act. With nowhere left to run, Mouse and Angelo prepare for a last showdown with their enemies. As they chase after legendary ancient weapons ensconced in the ages old battle between good and evil, Mouse and Angelo must each decide if a final victory is worth the cost. Book of the Just continues Mouse's story after The Devil's Bible and completes the journey she started so long ago in Bohemian Gospel. Imbued with a rich sense of history, magic, and mythology, this explosive final installment in Mouse's journey will keep you captivated until the very end. Discover the astonishing lessons rescue dogs can teach us about life, love, and ourselves As seen on BuzzFeed's "Best Dogs Gift Guide" In the follow-up to his New York Times bestseller Rescue Road, acclaimed journalist Peter Zheutlin offers a heartwarming and often humorous new look into the world of rescue dogs. Sharing lessons from his own experiences adopting labs with large personalities as well as stories and advice from dozens of friends and rescue advocates, Zheutlin reveals the surprising and inspiring life lessons rescue dogs can teach us, such as: - How to "walk a mile in a dog's paws" to get a brand-new perspective on Living with a dog is not one continuous "Hallelujah" moment--but it's never dull!! - Why having a dog helps you see your faults and quirks in a new light, even if you can't "shed" them completely - How to set the world right, one dog at a time For anyone who loves, lives with, or has ever wanted a dog, this charming book shows how the dogs whose lives we save can change ours for the better too.*

*"Dogs, famous and infamous and otherwise, throughout history, for children."--*

*Anthrozoology, the study of human-animal interactions (HAIs), has experienced substantial growth during the past 20 years and it is now timely to synthesize what we know from empirical evidence about our relationships with both domesticated and wild animals. Two principal points of focus have become apparent in much of this research. One is the realization that the strength of these attachments not only has emotional benefits for people, but confers health benefits as well, such that a whole area has opened up of using companion animals for therapeutic purposes. The other is the recognition that the interactions we have with animals have consequences for their welfare too, and thus impact on their quality of life. Consequently we now study HAIs in all scenarios in which animals come into contact with humans, whether as pets/companions, farm livestock, laboratory animals, animals in zoos, or in the wild. This topical area of study is of general importance in animal management, animal handling, animal welfare and applied ethology courses, and also for people within psychology, anthropology and human geography at both the undergraduate and postgraduate level. It will therefore be of interest to students, researchers, and animal managers across the whole spectrum of human-animal contact.*

In this thoroughly revised and updated classic, a renowned psychologist shows that mourning is far from predictable, and all of us share a surprising ability to be resilient. The conventional view of grieving--encapsulated by the famous five stages of grief: denial, anger, bargaining, depression, and acceptance--is defined by a mourning process that we can only hope to accept and endure. In The Other Side of Sadness, psychologist and emotions expert George Bonanno argues otherwise. Our inborn emotions--anger and denial, but also relief and joy--help us deal effectively with loss. To expect or require only grief-stricken behavior from the bereaved does them harm. In fact, grieving goes beyond mere sadness, and it can actually deepen interpersonal connections and even lead to a new sense of meaning in life.

Everything a child wants to know about dogs and puppies, from breeds, features, pet care, and grooming, to discovering how their dogs communicate with us and one another.

This book is an exploration of the integration-differentiation dynamics that result in a drive, or impulse, toward human sociality, arguing that our need to connect with other people is as fundamental as our need for food and shelter. In The Social Impulse: The Evolution and Neuroscience of What Brings Us Together, Jaime Pineda presents the evidence that social cognition is a Darwinian drive for differentiation and diversity. The book addresses the distinctive aspects of social behavior that arise from integration principles and seeks to answer the following questions: (1) Why does social cohesion arise? (2) What is the history of social dynamics? (3) How does social cohesion work? (4) When do the developmental aspects of social dynamism and social cohesion. By exploring the differences, similarities, and, most important, the interactivity between natural selection and social cohesion, this unique book provides a wealth of interesting, challenging, and unexpected insights.

While the past decade has seen a surge of research regarding canine cognition, this newfound interest has not caught the attention of many philosophers. Studies pertaining to dog minds have been pouring out of canine cognition labs all over the world, but they remain relatively ensconced within the scientific, sociological, and anthropological communities, and very few philosophers certainly have not shied away from theorizing about the nature of nonhuman animal cognition generally. Theories range from Cartesian disavowal of all nonhuman intelligence to arguments that even fish have complex minds and therefore humans should not eat them. Serious philosophical considerations about dogs and their relationship to humans, however, are entirely nonexistent, is a critical examination of the question "What are dogs thinking?" and what asking and attempting to answer this question reveals, not so much about dogs, but about us. With Minding Dogs Michele Merritt attempts to fill two significant gaps in the philosophy of animal cognition. First, she adds to the growing discussion on canine cognition, her own consideration. Second, she takes seriously our dynamic collaborations with our canine friends as crucial to understanding both their minds and our own.

**A beautiful, heartfelt, funny, and inspiring collection of photos and stories that maps the relationship between canine New Yorkers and their human counterparts. New York is a city of five boroughs, more than 250 distinct neighborhoods, 8.5 million people, and more than 600,000 dogs, who are as much a part of the social fabric as the people who follow them on the other end of the leash. City of Dogs maps this relationship with incredible four-color photos highlighting the scene. From the Bronx to Brooklyn and along the streets of Harlem and Manhattan, Ken Foster and Traer Scott explore the unique relationships between dogs and their human counterparts. We meet Alex Nuckel, living on disability and finding joy and purpose in caring for his two pit bulls, Lucy and Rocky. And Majora Carter, a community activist who has received a MacArthur grant, living and working with two stray shepherds she rescued in her own neighborhood. City of Dogs also takes us to a Midtown Manhattan law office, where staff are encouraged to bring their adopted dogs to work, and to the JFK airport, where we meet dogs who help screen at security. And then on to Brooklyn, where we meet award-winning author Jacqueline Woodson and her dogs, Toffee and Shadow. These are just a few of the amazing animals and their people featured in this perfect gift book for any dog lover.**

Smile is about the energy we share with our dogs, the state of mind behind that energy, and how a better understanding of the way dogs think and communicate can provide tremendous insight into our own behavior. It is about practicing kindness, achieving clarity, dumping bad habits and finding happiness. It is about removing tension and replacing it with peace, while working on your relationships. It is about being clear in your communication and honoring pivotal differences. It is about letting go of the stuff that isn't working. And it is about teamwork. Smile! connects you with your dogs in a meaningful manner, one in which teaching and learning goes both ways. It immerses you in canine culture, and it will assist you with both easy and "difficult" dogs, in situations where one dog or many are involved. If you equate training your dog with classes, lesson plans, the need for special equipment, frustration and ultimate surrender, then meet! Smile's commonsense, in-the-moment, smile-based and canine-centric approach will be of great help, and it will bring enjoyment and meaning into your life. Animal Models in Cancer Drug Discovery brings forward the most cutting-edge developments in tumor model systems for translational cancer research. The reader can find under this one volume virtually all types of existing and emerging tumor models in use by the research community. This book provides a deeper insight on how these newer models could de-risk modern drug discovery. Areas covered include up to date information on latest organoid derived models and newer genetic models. Additionally, the book discusses humanized animal tumor models for cancer immunotherapy and how they leverage personalized therapies. The chapter on larger animal, canine models and their use in and their use in pre-investigational new drug (pre-IND) development makes the volume unique. Unlike before, the incorporation of several simplified protocols, breeding methodologies, handling and assessment procedures to study drug intervention makes this book a must read. Animal Models in Cancer Drug Discovery is a valuable resource for basic and translational cancer researchers, drug discovery researchers, contract research organizations, and knowledge seekers at all levels in the biomedical field. Encompasses discussions on innovative animal models, xenograft, genetic models, primary models, organoid systems, humanized and other models in modern biology paradigms that are enhancing research in the field of drug discover Covers the use of these models in personalized medicine, immunotherapy, toxicology, pre-IND assessments and related drug development arenas Presents protocols, procedures, and a comprehensive glossary to help new readers understand technical terms and specialized nomenclature.

"A wonderful read -- Lorraine Kelly In this book for dog lovers everywhere, Jonathan Wittenberg says his dogs have taught him, more than anything else, how to appreciate the wonderful world in which we live -- and how to develop better relationships with his friends and families. In this wonderful, warm account of one man and his dog, Jonathan brings all the big themes of friendship, faithfulness, kindness, cruelty, grief, prayer and spiritual companionship to the fore, and shows us how we can learn so much from a dog's approach to life. If you're one of the 8.5 million dog owners in the UK the answer to a better way of living may already be under your roof.

A fundamental and groundbreaking reassessment of how we view and manage cancer When we think of the forces driving cancer, we don't necessarily think of evolution. But evolution and cancer are closely linked because the historical processes that created life also created cancer. The Cheating Cell delves into this extraordinary relationship, and shows that by understanding cancer's evolutionary origins, researchers can come up with more effective, revolutionary treatments. Athena Aktipis goes back billions of years to explore when unicellular forms became multicellular organisms. Within these bodies of cooperating cells, cheating ones arose, overusing resources and replicating out of control, giving rise to cancer. Aktipis illustrates how evolution has paved the way for cancer's ubiquity, and why it will exist as long as multicellular life does. Even so, she argues, this doesn't mean we should give up on treating cancer—in fact, evolutionary approaches offer new and promising options for the disease's prevention and treatments that aim at long-term management rather than simple eradication. Looking across species—from sponges and cacti to dogs and elephants—we are discovering new mechanisms of tumor suppression and the many ways that multicellular life-forms have evolved to keep cancer under control. By accepting that cancer is a part of our biological past, present, and future—and that we cannot win a war against evolution—treatments can become smarter, more strategic, and more humane. Unifying the latest research from biology,

ecology, medicine, and social science, The Cheating Cell challenges us to rethink cancer's fundamental nature and our relationship to it.
