A guide to hand-guns and shooting Himmelwright's guide to pistol and revolver shooting will particularly interest those who collect or shoot historical firearms. Various types of hand-gun are illustrated and described as is the ammunition that accompanied them. The author discusses shooting positions, target shooting and the reloading of ammunition. First published in the early 20th century, this book contains dedicated sections on revolver practice for the police forces of the period and interesting guidance in the use of hand-guns for ladies. Leonaur editions are newly typeset and are not facsimiles; each title is available in softcover and hardback with dustjacket; our hardbacks are cloth bound and feature gold foil lettering on their spines and fabric head and tail bands.

Ballistic Imaging assesses the state of computer-based imaging technology in forensic firearms identification. The book evaluates the current law enforcement database of images of crime-related cartridge cases and bullets and recommends ways to improve the usefulness of the technology for suggesting leads in criminal investigations. It also advises against the construction of a national reference database that would include images from test-fires of every newly manufactured or imported firearm in the United States. The book also suggests further research on an alternate method for generating an investigative lead to the location where a gun was first sold: "microstamping," the direct imprinting of unique identifiers on firearm parts or ammunition.

discipline (FATM-ID). It answers two primary questions that are necessary to assess the reliability of FATM-ID, including 1) Do different tools produce different tool marks? and 2) Can a trained examiner reliably distinguish among them? Other books published on the topic have assumed these true and have simply discussed what is involved in the discipline. This book brings together the most recent studies, serving as a well-referenced, single resource that shows that FATM-ID is scientifically reliable. Intended primarily for firearm and tool mark examiners, this valuable resource serves as a primary requirement for the training of firearm and tool mark examiners. Finally, it will be a valuable resource for attorneys who are seeking to better understand the scientific reliability of FATM-ID. Written by a foremost expert in FATM-ID, the book provides a complete and scientific examination for anyone involved in firearm and tool mark identification. Provides a single resource that examines the scientific reliability of firearm and tool mark identification Covers the role of bias in the examination process and how it can impact the reliability of the final outcome Written by an expert in the field with over 25 years of firearm and tool mark experience

Australian goldminers were among the first white men to have sustained contact with Papua New Guineans. Some Papua New Guineans welcomed them, worked for them, traded with them and learnt their skills and soon were mining on their own account. Others met them with hostility, either by direct confrontation or by stealthy ambush.

Many of the indigenous people and some miners were killed. The miners were dependent on the local people for labourers, guides, producers of food and women. Some women lived willingly in the miners' camps, a few were legally married, and some were raped. Working conditions for Papua New Guineans on the claims were mixed; some being well treated by the miners, others being poorly housed and fed, ill-treated, and subject to devastating epidemics. Conditions were rough, not only for them but for the diggers too. This book, republished in its original format, shows the differences in the experience of various Papua New Guinean communities which encountered the miners and tries to explain these differences. It is a graphic description of what happens when people from vastly different cultures meet. The author has drawn on documentary sources and interviews with the local people to produce, for the first time, a lively history.

Bolt Action Military & Sporting Rifles, 1877 to 1937

The author explores the original records and the bolt-action rifles themselves to reveal the fine nuances of many popular bolt-action mechanisms. The drawings exemplify the study; they were done by working from the guns, not factory drawings, old blueprints or catalogs. You will find in this book such things as lock times, spring rates and cam angles. There is also considerable historical content. For the modern actions, the historical recitation is based on the public record and on the recollections and statements of the men who did the design work.

The new 33rd Edition of the Blue Book of Gun Values by S.P. Fjestad has been expanded to 2,432 pages, easily making it the highest page count of any firearms book currently in print. New 2012 makes and models have

been included, along with updated values on discontinued firearms and antiques. Once again, the 80-page Photo Percentage Grading System[] provides high resolution color images that are the last word to help ascertain any firearm's correct condition factor based on the percentage of original condition. Revolvers, pistols, rifles, and shotguns are also shown separately, in addition to NRA Antique Condition Factors.

South Armagh was first described as "Bandit Country" by Merlyn Rees when he was Northern Ireland's Secretary of State, and for nearly three decades it has been the most dangerous posting in the world for soldiers. Toby Harnden has stripped away the myth and propaganda associated with South Armagh to produce one of the most compelling and important books of the subject. Drawing on secret documents and interviews in South Armagh's recent history, he tells the inside story of how the IRA came close to bringing the British state to its knees. For the first time, the identities of the men behind the South Quay and Manchester bombings are revealed. Packed with new information, Bandit Country penetrates the IRA and the security forces in South Armagh.

The History of Winchester Firearms 1866-1992

"The War in South Africa: Its Cause and Conduct" is a statement of the British case. Dr. Doyle does not pretend that the right was absolutely on one side, nor that the British campaign has been above criticism. His contention is that the British Government did its best to avoid war, and that the British army did its best to wage it with humanity. He considers the various charges brought against the British soldiers, the management of the concentration camps, and the cases of farm-burning, and his conclusions amount, on the whole, to a vindication of the British army.

I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

Forensic Firearm Examination

The Bolt Action

This new edition which updates the book through 1992 includes sections on the Model 101 O / U Rifle and O / U Rifle Shotgun models plus the Model 94. It also includes 22 new commemorative models.

Forensic Firearm Examination provides the reader with a thorough understanding of theory, application, and process of firearm comparison. It is essential in the field of forensic firearm examination to not only understand the marks that examiners are observing, but more importantly learn where these marks come from during the manufacturing process. This book explores the various machining techniques utilized in the manufacturing process and the resulting marks left by those tools. This information will equip the examiner with the knowledge to answer questions posed by the legal system regarding the uniqueness or potential similarity of marks on firearms imparted to fired bullets and cartridge cases. Intended primarily for firearm and tool mark examiners, this valuable resource serves as a primary requirement for the training of firearm and tool mark examiners. Other forensic science disciplines who rely on pattern matching as a primary determining factor whether or not two objects may share a common source would also find utility in this work. Finally, it will be a valuable resource for attorneys who are seeking to understand better the scientific aspects of firearm identification. Written by a foremost expert in the field, Forensic Firearm Examination explores specific firearm

manufacturing techniques and the resulting marks, which has not been covered in any book publication. Chris Monturo has over 23 years of experience as forensic firearm and tool mark examiner. Additionally, he is a distinguished member of the Association of Firearm and Tool Mark Examiners (AFTE), a past member of the Scientific Working Group for Firearm and Tool Marks (SWGUN), past member of the Organization of Scientific Area Subcommittees (OSAC) for firearm and tool marks and has instructed courses in machining for the firearm examiner in the United States and Internationally. Provides reader with a thorough understanding of theory, application, and process of firearm identification Topics include the manufacturing process of all components that interact with the bullet or case during firing, the nature of manufacturing and potential pitfalls, such as subclass

The most lavish work ever produced on American long arms, this book has been published with the full cooperation of the Winchester Division of the Olin Corporation, as well as Winchester licensee, the U.S. Repeating Arms Company. The book's large format presents many of the firearms in exquisite close-ups, accompanied by substantial details of history, development, and significance. Variations within model groups are given ample attention, and the book's organization gives an unequaled overview of nearly a century and a half of Winchester achievement. A unique, comprehensive table in the appendix gives serial numbers and related production data previously unavailable in any one source. Every collector and enthusiast will delight in its broad appeal, with over 300 photographs in full color and more than 165 in black and white.
