The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh

less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of

transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council

is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for

their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards. This book assesses the different dimensions of Japan-Malaysia economic relations, and contains a balanced collection of essays examining Japanese involvement in Malaysia.

Within a few short months in 1997, Asian economies that had been considered not only healthy but "miraculous" suddenly fell off a precipice as investors withdrew massively first from Asian currencies and, in rapid order, from equity markets across the region. On October 27 1997, the turmoil in Asian markets spooked Wall Street in the largest single-day decline in history, a drop of 550 points. It was predicted that the Asian crash could drive the US

trade deficit from \$191 billion to \$300 billion by 1998, creating huge new tensions in relations with some of the largest US trading partners. These wrenching changes, following a generation of success, raise numerous questions about the steps that led to the crisis, its likely outcome and the limits and constraints of "Asian capitalism". Edith Terry presents a blow-by-blow account of the crisis, beginning with the 1996 collapse of the Bangkok Bank of Commerce. In her overview, she links the fall of the Asian miracle with the theme of globalization, arguing that the crisis

demonstrates the urgency of dismantling restraints to trade, investment, and financial services, and that the United States should take leadership in pushing for new and sweeping reform through the World Trade Organization and in bilateral negotiations with its trading partners. The final section of the book deals with the rise of the "Asian miracle" - how the myth was created, who created it, why it succeeded for so long - and is informed by analysis of the Japanese prototype.

his unorthodox approach to childrearing: “ Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions ” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you ’ re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In

Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are

The main purpose of the Bill is to ensure that investigatory powers: interception of communications and acquisition of data, eg billing data; intrusive or covert surveillance; the use of covert human intelligence sources; and access to encrypted data, are used in accordance with human rights. For each of these powers, the Bill will ensure that the law clearly covers: the purposes for which they may be used; which authorities can use the powers; who should authorise each use of the power; the use that can be made of the material gained; independent judicial oversight; and a means of redress for the individual.
