The history of science is a story of human discovery--intertwined with religion, philosophy, economics and technology. The fourth in a series, this book covers the beginnings of the modern world, when 16th-century Europeans began to realize that their scientific achievements surpassed those of the Greeks and Romans. Western Civilization organized itself around the idea that human technological and moral progress was achievable and desirable. Science emerged in 17th-century Europe as scholars subordinated reason to empiricism. Inspired by the example of physics, men like Robert Boyle began the process of changing alchemy into the exact science of chemistry. During the 18th century, European society became more secular and tolerant. Philosophers and economists developed many of

the ideas underpinning modern social theories and economic policies. As the Industrial Revolution fundamentally transformed the world by increasing productivity, people became more affluent, better educated and urbanized, and the world entered an era of unprecedented prosperity and progress.

Although World War II began as a war in Europe, many in the United States, foreseeing the inevitable, began to prepare for war, putting no faith in the Neutrality Act. Preparations for war, essentially ending the Great Depression, affected the entire country, with Virginia particularly playing a major role. More than one million service men and women came to Virginia. The sheer scope of the military development in Virginia of the Army, Navy, Coast Guard and Air Force, providing training bases and support facilities, underscores the national resolve to be prepared. The book includes the Civil Air Patrol, wartime industry, POW camps, U-boat attacks, the Beach Patrol and other Virginia-related topics.

The New World History is a comprehensive volume of essays selected to enrich world history teaching and scholarship in this rapidly expanding field. The forty-four articles in this book take stock of the history, evolving literature, and current trajectories of new world history. These essays, together with the editors' introductions to thematic chapters, encourage educators and students to reflect critically on the development of the field and to explore concepts, approaches, and insights valuable to their own work. The selections are organized in ten chapters that survey the history of the movement, the seminal ideas of founding thinkers and today's practitioners, changing concepts of world historical space and time, comparative methods, environmental history, the "big history" movement, globalization, debates over the meaning of Western

power, and ongoing questions about the intellectual premises and assumptions that have shaped the field.

In this book, the noted intellectual historian Frank Ankersmit provides a systematic account of the problems of reference, truth, and meaning in historical writing. He works from the conviction that the historicist account of historical writing, associated primarily with Leopold von Ranke and Wilhelm von Humboldt, is essentially correct but that its original idealist and romanticist idiom needs to be translated into more modern terms. Rehabilitating historicism for the contemporary philosophy of history, he argues, "reveals the basic truths about the nature of the past itself, how we relate to it, and how we make sense of the past in historical writing." At the heart of Ankersmit's project is a sharp distinction between interpretation and representation. The historical text, he holds, is first and foremost a representation of some part of the past, not an interpretation. The book's central chapters address the concept of historical representation from the perspectives of reference, truth, and meaning. Ankersmit then goes on to discuss the possible role of experience in the history

writing, which leads directly to a consideration of subjectivity and ethics in the historian's practice. Ankersmit concludes with a chapter on political history, which he maintains is the "basis and condition of all other variants of historical writing." Ankersmit's rehabilitation of historicism is a powerfully original and provocative contribution to the debate about the nature of historical writing.

Museums flourished in post-apartheid South Africa. In older museums, there were renovations on the go, and at least fifty new museums opened. Most sought to depict violence and suffering under apartheid and the growth of resistance. These unlikely journeys are tracked as museums became a primary setting for contesting histories. From the renowned Robben Island Museum to the almost unknown Lwandle Migrant Labour Museum, the author demonstrates how an institution concerned with the conservation of the past is simultaneously a site for changing history.

Virginia in the War Years, 1938-1945

In recent years, historians across the world have become increasingly interested in transnational and global approaches to the past. However, the debates surrounding this new border-crossing movement have remained limited in scope as theoretical exchanges on the tasks, responsibilities and potentials of global history have been largely confined to national or regional academic communities. In this groundbreaking book, Dominic Sachsenmaier sets out to redress this imbalance by offering a series of new perspectives on the global and local flows, sociologies of knowledge and hierarchies that are an intrinsic part of historical practice. Taking the United States, Germany and China as his main case studies, he reflects upon the character of different approaches to global history as well as their social, political and cultural contexts. He argues that this new global trend in historiography needs to be supported by a corresponding increase in transnational dialogue, cooperation and exchange.
