

Ya R Ne Ya R Ne Ya Maz

Uncertainty presents significant challenges in the reasoning about and controlling of complex dynamical systems. To address this challenge, numerous researchers are developing improved methods for stochastic analysis. This book presents a diverse collection of some of the latest research in this important area. In particular, this book gives an overview of some of the theoretical methods and tools for stochastic analysis, and it presents the applications of these methods to problems in systems theory, science, and economics.

Computational Mathematics, Numerical Analysis and Applications

An Inquiry Into the History and Cult of Khra-'brug, Tibet's First Buddhist Temple

Dictionary of Obsolete and Provincial English

A Dictionary of Hindustani Proverbs

The first part of this volume gathers the lecture notes of the courses of the "XVII Escuela Hispano-Francesa", held in Gijón, Spain, in June 2016. Each chapter is devoted to an advanced topic and presents state-of-the-art research in a didactic and self-contained way. Young researchers will find a complete guide to beginning advanced work in fields such as High Performance Computing, Numerical Linear Algebra, Optimal Control of Partial Differential Equations and Quantum Mechanics Simulation, while experts in these areas will find a comprehensive reference guide, including some previously unpublished results, and teachers may find these chapters useful as textbooks in graduate courses. The second part features the extended abstracts of selected research work presented by the students during the School. It highlights new results and applications in Computational Algebra, Fluid Mechanics, Chemical Kinetics and Biomedicine, among others, offering interested researchers a convenient reference guide to these latest advances.

This book discusses convex analysis, the basic underlying structure of argumentation in economic theory. Convex analysis is also common to the optimization of problems encountered in many applications. The text is aimed at senior undergraduate students, graduate students, and specialists of mathematical programming who are undertaking research into applied mathematics and economics. The text consists of a systematic development in eight chapters, and contains exercises. The book is appropriate as a class text or for self-study.

This publication represents the results of a detailed historical-philological and anthropological study dedicated to the history and cult of Khra-'brug or the "Thundering Falcon" temple. It constitutes the first serious inquiry into the location's history, focusing exclusively on this major religious shrine and pilgrimage site, which, according to the Tibetan tradition, is commonly regarded as the oldest (Buddhist) temple in Tibet. The sanctuary, located in the heart of the Yar-lung Valley in southern Central Tibet, which is the cradle of the Tibetan civilization and erstwhile homeland of the Tibetan kings, was erected in the 7th century during the reign of the emperor Srong-btsan sgam-po (d. A.D. 649). Chronologically the temple may have been built immediately preceding the temple sanctuary of Lhasa, which was erected by the same king, the Ra-sa'i' Phrul-snang, otherwise known as Jo-khang, and which is famed as the symbolic centre and national sanctum of Buddhist Tibet. The main part of the book is made up of a number of primary sources that deal with Khra-'brug, which are presented here in extensively annotated translations. These include excerpts gleaned from various historiographical works as well as local documents. One of these is a local pilgrims' guide, Khra 'brug gnas bshad (dating from the early 20th century), which forms the most important source in the book and which is also reproduced in facsimile. Furthermore, extensive surveys that were conducted in situ are presented, gleaned from the wealth of local oral traditions that still prevail in Khra-'brug and in Yar-lung. They deliver significant new insights and thus enrich the data extracted from the written sources appreciably. Together, the source material and its comparative analysis open a door to the fascinating world behind the history of this temple, a vista that, from a modern perspective, allows us to appraise and survey central issues related to politics and religion, as well as a number of arcane cult traditions of the period from the 7th to 20th centuries.

With The Voices of Babyn Yar—a collection of stirring poems by Marianna Kiyanovska—the award-winning Ukrainian poet honors the victims of the Holocaust by writing their stories of horror, death, and survival by projecting their own imagined voices. Artful and carefully intoned, the poems convey the experiences of ordinary civilians going through unbearable events leading to the massacre at Kyiv’s Babyn Yar from a first-person perspective to an effect that is simultaneously immersive and estranging. While conceived as a tribute to the fallen, the book raises difficult questions about memory, responsibility, and commemoration of those who had witnessed an evil that verges on the unspeakable.

Across scholarship on gender and sexuality, binaries like female versus male and gay versus straight have been problematized as a symbol of the stigmatization and erasure of non-normative subjects and practices. The chapters in Queer Excursions offer a series of distinct perspectives on these binaries, as well as on a number of other, less immediately apparent dichotomies that nevertheless permeate the gendered and sexual lives of speakers. Several chapters focus on the limiting or misleading qualities of binaristic analyses, while others suggest that binaries are a crucial component of social meaning within particular communities of study. Rather than simply accepting binary structures as inevitable, or discarding them from our analyses entirely based on their oppressive or reductionary qualities, this volume advocates for a re-theorization of the binary that affords more complex and contextually-grounded engagement with speakers' own orientations to dichotomous systems. It is from this perspective that contributors identify a number of diverging conceptualizations of binaries, including those that are non-mutually exclusive, those that liberate in the same moment that they constrain, those that are imposed implicitly by

researchers, and those that re-contextualize familiar divisions with innovative meanings. Each chapter offers a unique perspective on locally salient linguistic practices that help constitute gender and sexuality in marginalized communities. As a collection, Queer Excursions argues that researchers must be careful to avoid the assumption that our own preconceptions about binary social structures will be shared by the communities we study.
