In the United States, approximately 14 million people have had cancer and more than 1.6 million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain daunting. Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side effects from treatment, and decisions about care often are not based on the

Get Free Your Health Today Pcc

latest scientific evidence. The cost of cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72 billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable for patients and their families and are creating disparities in patients' access to high-quality cancer care. There also are growing shortages of health professionals skilled in providing cancer care, and the number of adults age 65 and older--the group most susceptible to cancer--is

Get Free Your Health Today Pcc

expected to double by 2030, contributing to a 45 percent increase in the number of people developing cancer. The current care delivery system is poorly prepared to address the care needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple coexisting diseases, increased side effects from treatment, and greater need for social support. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis presents a conceptual framework for improving the quality of cancer care. This

study proposes improvements to six interconnected components of care: (1) engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve the quality of care. Delivering High-Quality Cancer Care: Charting a

New Course for a System in Crisis provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care community can improve the quality of life and outcomes for people facing a cancer diagnosis.

This is the first undergraduate textbook to provide a comprehensive overview of essential knowledge, skill, and attitudes about safety in nursing practice. It reflects the six areas of nursing competencies as developed by the Quality and Safety Education Program for Nurses (QSEN) initiative, which are currently required content in undergraduate nursing programs. Using an inter-professional focus, the book addresses the fundamental knowledge required of entry-level nurses in each of the six QSEN areas: quality

improvement, patient safety, teamwork and collaboration, evidence-based practice, informatics, and patient-centered care. The book includes all of the content required for nursing programs to be accredited by AACN or NLN. Contributors include nurse educators, faculty, researchers, administrators, case managers, quality improvement practitioners, and entrepreneurs of nursing as well as physicians and librarians from throughout the U.S. Readers will be privy to the unique perspectives of different health care partners

who provide real life examples from an inter-professional team perspective. These include pharmacists, lawyers, physicians, librarians, quality improvement nurses, radiology technologists, nurse practitioners, hospital board members, patients, and others. Each chapter includes objectives, opening scenarios, case studies, critical thinking exercises, key terms, NCLEX-style questions, photos, tables, figures, web resources, recommendations for additional reading, and PowerPoint slides. An important feature of the book is the listing of QSEN

Quality Caring in Nursing and Health Systems, Third Edition delivers a detailed framework of the Quality Caring Model©, a theory that analyzes the relationships among the self, the community served, patients and families, and the health care team. As the population requiring healthcare increases, so does the room for error and the demand for patient-centered care. The health system, focused on procedures,

Get Free Your Health Today Pcc

protocols, technology, and lower costs, continues to inflict unnecessary harms upon already vulnerable patients and their families. Nurses, as the largest group of health care professionals that spend the longest time with patients and families, are in a unique position to advance new relationship-centric approaches to health care. This text focuses on the practical application of the Quality Caring Model, featuring new examples of ways to embed caring into the health care environment. An abundance of practice analyses and reflective exercises

reinforce the book's content. Written for nursing students, clinicians, educators, and leaders, this text delves into the intricacies of relational health care. Chapters apply the model to patients and families and provide optimal learning strategies to inform quality-caring competencies. Case studies, interviews, exemplars, relevant lessons, and suggested improvements woven throughout the text push the model further than theory and into practice. The loss of hearing - be it gradual or acute, mild or severe, present since birth or acquired in older age - can have significant effects on one's communication abilities, quality of life, social participation, and health. Despite this, many people with hearing loss do not seek or receive hearing health care. The reasons are numerous, complex, and often interconnected. For some, hearing health care is not affordable. For others, the appropriate services are difficult to access, or

Get Free Your Health Today Pcc

individuals do not know how or where to access them. Others may not want to deal with the stigma that they and society may associate with needing hearing health care and obtaining that care. Still others do not recognize they need hearing health care, as hearing loss is an invisible health condition that often worsens gradually over time. In the United States, an estimated 30 million individuals (12.7 percent of Americans ages 12 years or older) have hearing loss. Globally, hearing loss has been identified as the fifth

leading cause of years lived with disability. Successful hearing health care enables individuals with hearing loss to have the freedom to communicate in their environments in ways that are culturally appropriate and that preserve their dignity and function. Hearing Health Care for Adults focuses on improving the accessibility and affordability of hearing health care for adults of all ages. This study examines the hearing health care system, with a focus on non-surgical technologies and services, and offers recommendations

for improving access to, the affordability of, and the quality of hearing health care for adults of all ages.

The emergence of severe acute respiratory syndrome (SARS) in late 2002 and 2003 challenged the global public health community to confront a novel epidemic that spread rapidly from its origins in southern China until it had reached more than 25 other countries within a matter of months. In addition to the number of patients infected with the SARS virus, the disease had profound economic and political

Get Free Your Health Today Pcc

repercussions in many of the affected regions. Recent reports of isolated new SARS cases and a fear that the disease could reemerge and spread have put public health officials on high alert for any indications of possible new outbreaks. This report examines the response to SARS by public health systems in individual countries, the biology of the SARS coronavirus and related coronaviruses in animals, the economic and political fallout of the SARS epidemic, quarantine law and other public health measures that

Get Free Your Health Today Pcc

apply to combating infectious diseases, and the role of international organizations and scientific cooperation in halting the spread of SARS. The report provides an illuminating survey of findings from the epidemic, along with an assessment of what might be needed in order to contain any future outbreaks of SARS or other emerging infections. We are all on a personal journey of discovery and each day is an opportunity to harvest wellness and wisdom, discover our inner truth and find meaning and purpose in our life. What most people do

Get Free Your Health Today Pcc

not recognise, is that they are perfectly whole and complete just as they are. In the pursuit of what they perceive would be a better life, they fail to recognise that wellness and happiness is already within their reach. The foundation for wellness and happiness is built by reclaiming your personal power, drawing wisdom from your life experiences and recognising and fulfilling your divine life purpose. This book highlights important lessons that can be to drawn from each stage of your life journey, and identifies how these can

support the foundation for personal wellness and wisdom. This is your Time to Blossom, so enjoy the journey, and live it well!

Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. In Masterful Health & Wellness Coaching Dr. Arloski focuses on advancing the reader's understanding of the process of coaching in the health and wellness setting and guides the reader to a comprehensive level of expertise. Honing the craft as wellness coaches is the goal. Masterful Health & Wellness Coaching offers tools to become a true master of the history, research, scholarship, and techniques of wellness coaching

Get Free Your Health Today Pcc

at its highest level. Masterful Health & Wellness Coaching is divided into three parts, beginning with a foundation that great coaching is about transformation. Changing behavior needs to be viewed not through a unitary lens, but in the context of growth and development. Arloski reveals how this can be done for the client, for the coach, and for the growing profession of wellness coaching. The second part focuses on "How to Be", that is, a coaches presence and way of being in the world and with a client, and the powerful effect this has upon the coaching process. Part Three takes a

deeper dive into the craft of wellness coaching. Throughout Dr. Arloski references what can be learned from relevant theory and research. Masterful Health & Wellness Coaching is tailored to coaches who want to go beyond the basics of "SMART Goals" and accountability, beyond tracking calories and sit-ups. It is for: - Coaches who want to become scholars of coaching. - Coaches who want to develop a greater understanding of the process of behavioral change. - Coaches who want to learn more about wellness. - Coaches who want to master what the entire field of health promotion has

Get Free Your Health Today Pcc

discovered about being well. - Coaches who want to become skilled craftspeople. - Coaches who want to meet their clients with understanding, empathy, and non-judgment. Dr. Arloski believes that coaching isn't about all the things a client is doing wrong and how grim their situation is. It's about what is needed to ensure a successful future. Masterful Health & Wellness Coaching gives you the tools to start your client on the path to success and to coach him or her until their healthy-living skills are second nature. The root of the word "coach" can be traced to a village in Hungary, Kocs, where carriages

Get Free Your Health Today Pcc

were made in the 1500's. Coaches love metaphors and what is better than this one: A "coach" takes you from where you are at to where you want to go. Perfect. The client is the one with the reins and it is the coaching process that facilitates the journey.

responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable

Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills,

and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

As a community, aligning efforts across a community to support the safety and well-being of vulnerable and underserved individuals is extraordinarily difficult. These individuals suffer disproportionately from health issues, job loss, a lack of stable housing, high utility costs, substance abuse, and homelessness. In addition to medical care, these individuals often critically need access to community social sector organizations that provide a distinct and complementary set of services, such as housing, food services, emergency utility assistance, and employment

assistance. These services are just as vital as healthcare services to these individuals' long-term health and well-being, with data suggesting that 80-90% of health outcomes can be attributed to factors beyond direct medical intervention. This book proposes a novel approach to the coordination of medicine and social services through the use of people, process, and technology, with the goal being to streamline coordination between medical and Community-Based Organizations and to promote true cross-sector patient and client advocacy. The book is based on the

experience of Dallas, TX, which was one of the first metropolitan regions to develop a comprehensive foundation for partnership between a community's clinical and social sectors using web-based information exchange. In the 5 years since the initial launch, the authors have been able to provide seamless connection, communication, and coordination between healthcare providers and a wide array of community-based social service organizations (a/k/a Community-Based Organizations or CBOs), criminal justice entities, and various other community

organizations, including non-collegiate educational systems. This practical how-to guide is the codification of transferrable lessons from successes and challenges faced when working with clinical, community, and government leaders. By reading this playbook, leaders interested in building (or expanding) connected clinical-community services will learn how to:

- 1) facilitate cross-sector care coordination;
- 2) enable community care partners to better provide targeted services to community residents;
- 3) reduce duplication of services across partnering

organizations; and 4) help to bridge service gaps in the currently fragmented system. Implementation of services, as recommended in this book, will ultimately streamline assistance efforts, reduce repeat crises and emergency funding requests, help address disparities of care, and improve the health, safety, and well-being of the most vulnerable community residents.

The Primeiro Comando do Capital (PCC) is a Sao Paulo prison gang that since the 1990s has expanded into the most powerful criminal network in Brazil. Karina Biondi's rich ethnography of

the PCC is uniquely informed by her insider-outsider status. Prior to his acquittal, Biondi's husband was incarcerated in a PCC-dominated prison for several years. During the period of Biondi's intense and intimate visits with her husband and her extensive fieldwork in prisons and on the streets of Sao Paulo, the PCC effectively controlled more than 90 percent of Sao Paulo's 147 prison facilities. Available for the first time in English, Biondi's riveting portrait of the PCC illuminates how the organization operates inside and outside of prison,

creatively elaborating on a decentered, non-hierarchical, and far-reaching command system. This system challenges both the police forces against which the PCC has declared war and the methods and analytic concepts traditionally employed by social scientists concerned with crime, incarceration, and policing. Biondi posits that the PCC embodies a "politics of transcendence," a group identity that is braided together with, but also autonomous from, its decentralized parts. Biondi also situates the PCC in relation to redemocratization and

Secretary General of the General Synod of the Church of England, a name that will resonate with PCC members. Since it was published in 1979, An ABC for the PCC has proved an invaluable source for parochial church councillors, churchwardens and clergy alike. It provides information and practical suggestions about the legal and spiritual duties and responsibilities of the PCC, with an emphasis on real partnership between clergy and laity.

available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. *Crossing the Quality Chasm* makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and
